## Wild DI1000 DISTOMAT™

The EDM you can afford for every crew

### a breakthrough

in size	weight	performance	price
---------	--------	-------------	-------

In day-to-day work, 99% of distance measurements are less than 500 m. The need is for a small, lightweight, easy-to-use EDM that measures quickly and accurately.

This is the DI1000, the instrument that makes a tape redundant:

- 500 m to a single prism
- 800 m to three prisms (1000 m in favourable conditions)
- 5 mm +5 ppm accuracy
- Slope, horizontal distance, height difference
- Setting-out mode
- Fits on all Wild theodolites, optical and electronic

The ideal instrument for:

- Building and construction
- Civil engineering and setting out
- Drainage and irrigation
- Cadastral, detail and topographic surveys
- Mining and tunnelling

**RESTON**

**1 RESTON Pot Sliding Bearings**  
are highly suitable for installation in bridge structures. They feature a low-profile design, low weight and high loading capacity.

**2 RESTON Linear Tilting and Sliding Bearings**  
are a combination of normal linear tilting bearings and PTFE sliding bearings and are suitable for installation in bridge structures.

PROCEQ SA  
Riesbachstrasse 57  
CH-8034 Zurich

**3 LASTO-BLOCK Bearings**  
are suitable for building, civil engineering and bridge construction applications. Their simple form allows easy installation.

**4 LASTO-STRIP Bearings for Buildings**  
were especially developed for building constructions. They are particularly suitable for movement compensation between concrete slabs and load-supporting walls and prevent structural cracking.

**5 TENSA-ACME Roadway Construction Joints**  
are highly suitable for installation in traffic levels (parking lots, bridges, airport areas etc.). Dilatation up to 60 mm.

**6 TENSA-LASTIC Roadway Construction Joints**  
meet all the requirements that can be made in bridge engineering of a modern joint design. They are rugged and watertight. Dilatation range 60 mm and bigger.
