The British Council International Medical Course

Recent Advances in Tropical Medicine: 3–9 June 1984 in Liverpool

The course is designed to bring participants up to date on recent developments in the field of tropical medicine from the clinical as well as laboratory aspects. It will deal with recent advances in clinical practice, clinical epidemiology and therapeutics of the major tropical parasitic diseases. The relationship of laboratory science to clinical tropical practice with particular reference to immuno-diagnosis, biochemical identification of parasites and the pharmacokinetics of some of the drugs used in tropical medicine will be covered. A morning will be devoted to the salient problems of tropical paediatrics.

The Directors of Studies will be Professor H. M. GILLES and Dr. D. R. BELL of the Liverpool School of Tropical Medicine. The course is designed for experienced physicians interested in new developments in tropical medicine, both in the clinical and research fields, and in various imported tropical diseases. There are 30 vacancies.

Fee £430 (Residential), £250 (Non-residential).

*Further information and application forms can be obtained from
Courses Department, The British Council, 65 Davies Street, London W1Y 2AA.*

VIIth International Congress of Protozoology Nairobi, Kenya: 24th to 30th August 1985

The Seventh International Congress of Protozoology, organized by the Protozoology Section of the East African Society of Parasitologists is scheduled to take place in Nairobi, Kenya, from the 24th to 30th August, 1985.

The Congress will be held in Africa for the first time and will be open to scientists from all over the world involved in studies of various aspects of both free living and parasitic protozoa. The Congress will cover topics in protozoology, parasitology, epidemiology, cell biology and related disciplines, and will have a special focus on tropical problems.

Dr. LEONARD H. OTIENO
Secretary General
Organizing Committee of the
VIIth International Congress of Protozoology
P.O. Box 60444
Nairobi, Kenya

Instructions to authors (revised September 1982)

Manuscripts in English, German or French should be submitted in duplicate (i.e. the original with one copy, and three sets of illustrations) to Acta Tropica, Swiss Tropical Institute, Socinstrasse 57, CH-4051 Basel, Switzerland. They will be sent, as a rule, to two referees. The decision to accept, revise, or refuse a paper will be made by the editors. The editors assume that papers submitted to Acta Tropica have not been and will not be published elsewhere.

The *manuscripts* should be typewritten double-spaced with a wide margin. Original papers **should not exceed 10 printed pages** including tables and figures. Exceptionally, the editors may accept larger manuscripts. The authors are charged for exceeding pages at a rate of sFr. 150.– per page.

Original papers should be organized as follows: Summary – up to 5 Key words – Introduction – Material (or Patients) and Methods – Results – Discussion – Acknowledgments – References.

A short and precise *summary* only in English must precede original papers and review articles and contain the essential information. For papers written in German or French the summary should be more detailed and must be preceded by the English translation of the title.

Short communications are only accepted in English and may not exceed 2 printed pages including tables and figures.

Bibliographical references in the text should be given by the name of author(s) and the year of publication. In the case of 3 or more authors they are cited in the text: (Meier et al., 1983). The list of references at the end of the paper should be arranged in alphabetical order of the authors, featuring name and initials of authors, full title of paper, name of journal, followed by volume, page(s), and year of publication. For books the name and address of the publishers should also be mentioned.

Examples:

Peters W.: Chemotherapy and drug resistance in malaria. Academic Press, London/New York 1970.

Saunders J. P., Brown G. W., Shirai A., Huxsoll D. L.: The longevity of antibody to Rickettsia tsutsugamushi in patients with confirmed scrub typhus. Trans. roy. Soc. trop. Med. Hyg. 74, 253-257 (1980).

Weitz B.: Methods of identifying the bloodmeals of Glossina. In: The African trypanosomiasis, ed. by H. W. Mulligan, p. 416-423. George Allen & Unwin Ltd., London 1970.

Tables and figures should be added to the manuscript on separate sheets and numbered, legends of tables and figures being on a special sheet. In view of production costs, the number of figures and tables must be restricted to an irreducible minimum. Only 3 pages of half-tone illustrations per manuscript will be accepted. Additional half-tone pages will be charged for at a rate of sFr. 150.– per page. Color plates can be reproduced only as an exception and at the author's expense.

Photographs must be presented on glossy paper in three complete sets. In the first 2 sets labels and explanatory marks to be added should be indicated with black or white transfer letters. Photographs must be arranged into groups and mounted on a white board in camera-ready form (maximal size: 11.7 × 17.6 cm). The third set will consist simply of the photographs, unmounted, with no additions at all, only numbered on the back.

The complete *postal address* of the authors must be indicated.

Galley proofs will be sent to the authors for correction. Author's corrections up to 10% of the cost of composition are paid for by the publishers; additional corrections at the author's expense. Proofs are to be returned immediately, otherwise publication may be delayed.

The publishers will produce 50 *reprints* of each paper free of charge. Further copies will be provided at the rates indicated in the order form you will receive with the galley proofs.

Tropical Diseases Research Series

Published on behalf of the

UNDP / WORLD BANK / WHO

Special Programme for Research and Training in Tropical Diseases

The series will deal with current outstanding problems in research related to the control of major infectious tropical diseases. It is intended to attract scientists working in other disciplines to the problems and opportunities for research which are offered by the infective agents of concern to the Programme, and to acquaint those already working on these organisms with new awareness for investigation which advances in other biomedical sciences may offer.

The Special Programme is a goal-oriented research and training programme with two objectives: (1) Research and development to obtain new and improved tool for the control of major tropical diseases, and (2) Strengthening of the research capability of the tropical countries.
