ORIENTALIA HELVETICA

Chinese paintings in the Charles A. Drenowatz Collection

CHU-TSING LI

UNIVERSITY OF KANSAS

Since the arrival by sea of European missionaries and traders in China during the 16th century, there has been a constant flow of art objects from China to various parts of Europe. Porcelains, jades, bronzes, lacquer wares, enamels, furniture, screens, and many other objects have found their way to palaces, private homes and later museums of London, Paris, Berlin, Amsterdam, Stockholm, and other cities. However, it was only in the 20th century that painting and calligraphy, regarded by the Chinese as the highest forms of their artistic expression, have caught the attention of museum directors and private collectors. Undoubtedly, the great exhibition of Chinese art at the Burlington House, London in 1935/36, with a large group of objects lent by the Chinese Palace Museum and many other works borrowed from both public and private collections in Asia, Europe and America, was a turning point in this new interest. Unfortunately, the Second World War interrupted its development. More recently, the Marco Polo Memorial Exhibition of Chinese Art at Venice in 1954, though not so extensive as the London show, was also a great stimulant in collecting activity in Europe. Among the most important collections of Chinese painting built up in the course of more recent years is the one owned by Mr. Charles A. Drenowatz of Zürich.

The remarkable history of Mr. Drenowatz' collecting activity is that he did not begin until the mid-1950's, when sources of paintings directly from China had been cut off by recent political development on the mainland. Up to that time, museums and collectors had been more interested in earlier paintings, such as those of T'ang, Sung and Yüan dynasties (10th to 14th centuries) than those of later dynasties. It was partly due

to the greater availability of later Chinese art, and more significantly, to the changing aesthetics of modern Western painting, making appreciation of later Chinese artistic expression possible, that Ming and Ch'ing (late 14th to early 20th century) paintings began their appeal to the Western eye. The exhibition at the Wildenstein Gallery in New York in 1949 and the one on Chinese landscape painting at the Cleveland Museum of Art in 1954 both became milestones of this new development. As one of the very few private collectors of Chinese painting in Europe, Mr. Drenowatz concentrated his attention in Ming and Ch'ing works. The result is that, in the course of about one decade, he has built up one of the most important collections of Chinese painting in Europe.

In collecting, the taste of the owner is always the most significant determining factor. With a strong interest in Chinese philosophy and culture, Mr. Drenowatz has developed an eye and taste for Chinese art that parallel some of the Chinese literati connoisseurs. The main interest lies in landscape painting, regarded by the Chinese as the most important expression in their art. A taste for the black and white, the very simple expression of the Chinese painter, is also an outstanding factor. Following the development of Chinese art during the last three hundred years, he has gathered together some fifty paintings, in hanging scrolls, handscrolls and albums, in the Chinese literati tradition. The more colorful, decorative and narrative approach of the academic and professional schools, once very strong in China, is not much represented in this collection. From the literati point of view, all art must be an expression of the superior taste and unconventional approach of the artist. This is what is followed throughout the Drenowatz collection of paintings.

Two remarkable scrolls in this collection are exceptions to this main interest in landscape. Both are figure paintings that show strong ties with the past, in both subject matter and style. The first, a short handscroll depicting a secret emissary sent by Emperor T'ai-tsung of T'ang dynasty to obtain the priceless piece of calligraphy by Wang Hsi-chih from Monk

Pien-ts'ai by trickery (fig. 1),¹ has a signature of Chao Lin of the middle of the 14th century, who was the grandson of Chao Meng-fu (1254-1322) and son of Chao Yung. According to the inscription, the painting is a direct imitation of a work by Yen Li-pen, a famous painter of the 7th century. Although the original of Yen's painting is no longer extant, his composition is still known to us through a number of close copies. A comparison between the Chao Lin painting and these copies shows that, in spite of his imitation of the T'ang master, Chao is quite original in his new approach to the classical model. The changes he makes in the painting reveal that, while trying to retain the realism of the T'ang painter, he was striving to achieve the aesthetic and pictorial values developed in the Yüan period. The other figure scroll, *The Four Joys of Po Hsiang-shan* (fig. 2),² is a work of Ch'en Hung-shou (1599-1652), in conjunction with his son and a pupil. A long scroll, it follows the early convention of figure painting in dividing the painting, according to the subject matter, into four separate scenes, with inscriptions in between which are poems written by the T'ang poet Po Chü-i, who is the main character that appears in all four scenes. While the painting seems to be an original creation of Ch'en Hung-shou, the style is derived from the T'ang and the Five Dynasties, thus showing a strong archaic approach. These two figure scrolls, therefore, present two aspects of Chinese painting in its tie with the past. Both try to express something new in the name of adherence to the past. In the 14th century scroll, the artist searches into the T'ang period to discover a new sense of poetry and spirit consonance and to make this quality more outstanding in his own interpretation, as a way of expressing the literati taste for the pure aesthetic in a troubled world. On the other hand, in the 17th century scroll by Ch'en Hung-shou, the T'ang style is turned into a new mannerism as a reflection of the artist's

2. Reproduced in Cheng Chen-to, *The Great Heritages of Chinese Art*, Shanghai 1954, X, pls. 7 and 8 and some other publications from the mainland and *The Arts of the Ch'ing Dynasty*, London, 1964, Nr. 39.

attempt to preserve his own individuality and identity in the corrupt world of late Ming and the upside-down-world of early Ch'ing period.

In a way, these two figure scrolls furnish us with a key to understand the landscape paintings, which constitute the main body of this collection. Landscape painting in China began to be an independent subject for high artistic expression in the 10th century. Its development from the 10th to 14th centuries reveals a change from the archaic, idealistic, realistic to expressionistic, setting definite types and models for later artists to follow. During the Ming and Ch'ing periods, to which all of the landscape paintings in the Drenowitz collection belong, there is a persistent effort on the part of the painters to return to the earlier models from Sung to Yüan. However, among the major artists, this desire to follow earlier examples is only a point of departure to break new grounds for new expression. At least, this is the general practice of the literati painters of the Ming and Ch'ing periods.

The most important school of literati painting in the Ming period is the Wu School, which centers in the city of Soochow and covers also a number of the surrounding districts. A wealthy as well as beautiful city in the lower Yangtze River area, Soochow began to be one of the great cultural centers of China during the 14th century. While local talents in art and poetry abounded, many famous writers and painters from other parts of China also flocked to the city. During the first years of Ming dynasty, the unfortunate persecution of many scholars and officials by Emperor Hung-wu seems to have interrupted the brilliant development of the late Yüan period. However, by the second half of the 15th century, the city seems to have recovered from this tragic interlude. From that time on Soochow was, for more than a century, the great city of Chinese painting, with dozens of new talents in every generation. While some artists took the professional line, producing pleasing, colorful and decorative paintings for the rich, most of the serious artists belong to the literati tradition. Well-educated in the classics and the arts, most of them served for some years as officials but usually retired early or

declined appointment and spent their time with their intimate friends, writing poetry or painting pictures. Their work is the expression of a highly sophisticated culture. Their art goes beyond the limits of representation and expresses their taste for simple form, pure content and deep feeling.

In this connection, one can gain a great insight into the Wu School by a number of outstanding examples. The earliest landscape in this group is also a hitherto unpublished, earliest dated painting of Shen Chou (fig. 3), the founder of the school. Different from the ones by Shen Chou usually known to us, which are mostly done in his later years revealing a combination of influences from Yüan artists Ni Tsan and Wu Chen, this painting, depicting a monk standing on a stone bridge looking up to huge pine trees and lofty mountains, is in the style of another Yüan painter, Wang Meng. The date of the painting, 1461, is extremely important, for it shows that it was executed at the age of 35, when he was yet to form his own style. This relationship with Wang Meng is only natural, for Shen Chou's great-grandfather, according to documents, was a good friend of the late Yüan artist. There were works of Wang Meng in the family. Most important, according to Wen Cheng-ming, Shen Chou's famous pupil, Shen himself in his early years imitated the works of Wang Meng. It seems to be logical to think of this painting by Shen Chou as an important link between the Yüan and Ming schools of literati painters. There is a close parallel between Wang Meng's *Literary Gathering in Forests and Springs* of 1367³ and the Shen Chou painting, which eventually led to the latter's better known *Lofty Mt. Lu* of 1467 now in the Palace Museum, Taiwan.⁴

Compared with these paintings, the Drenowitz painting brings out one of the important facets of Shen Chou's development, namely his early

3. This painting is reproduced in *Shina Nanga Taisai*, Tokyo, 1935-1937, IX, pl. 83, and *Shen Chou kuo kuang chi*, Shanghai, 1908-1912, V. pl. 13. A different version of the painting is shown in *Chūgoku Meigashū*, Tokyo, 1935, II.

4. This painting is reproduced, among others, in *Three Hundred Masterpieces of Chinese Painting in the Palace Museum*, Taipai, 1959, p. 219, and *Chinese Art Treasures*, Skira, Geneva, 1961, pl. 94.

experiments to find his own style. Unlike Wang Meng's mastery of the swaying rhythm and lyrical quality, Shen Chou is much more straightforward and robust. He could follow Wang Meng's approach to depict his feeling for nature in terms of the complex formation of mountains and tall powerful trees, for he was able to approximate the Yüan artist's style, already quite an achievement for a young man at that time. But at the same time, he seems to have realized that, instead of depending more on forms of nature, he could develop more by expressing through brush-work. This seems to be the direction of his development. With an eye on the works of the other late Yüan artists, such as Huang Kung-wang, Ni Tsan and Wu Chen, he simplified his paintings, concentrated on expressive brushwork, and eventually reached a stage where he showed a style more related to his own personality.

This shift from dependence on shapes of nature to the use of brush-work is one of the qualities that make him so much respected by later artists, and is also the foundation stone of the Wu School in the literati painting development. The same pattern of development can be found in the works of his leading disciple, Wen Cheng-ming, who also worked on the Wang Meng elements during his earlier works, but again turned to a greater sense of freedom and brushwork during his last years. Some of Wen's pupils are represented in this collection. Two paintings by Lu Chih (1495-1576) show the range of this follower of Wen. A small painting of a high mountain surrounded by clouds is derived from the tradition of Mi Fu and Kao K'o-kung, but done with a greater sense of freedom and a stronger emphasis on brushwork than those of these Sung and Yüan masters. In contrast, Lu's handscroll shows his more typical style, combining elements from both Ni Tsan and Wang Meng to form a personal approach, a very common practice of many Ming artists.

A different facet of the art of Soochow is represented by a scroll of Hsieh Shih-ch'en,⁵ who combines some of the Wu School quality of

5. Reproduced in *1000 Jahre Chinesische Malerei*, München, 1959, pl. 61, and Michael Sullivan, *Chinese and Japanese Art* (The Book of Art, IX), Grolier, N.Y., 1965, fig. 295, 1.

Shen Chou with elements of the Che and academic schools, such as the narrative interest, the use of mist, and the Southern Sung approach. This is what makes him more a Che School painter than a Wu School painter, in the eyes of later Chinese critics. A recently acquired album of landscapes in the Southern Sung tradition painted in the 16th century (fig. 4), identified by the 17th century connoisseur Kao Shih-ch'i as a work of the famous collector Hsiang Yüan-pien (1525-1590), also shows another aspect of the Wu School. Though not native of Soochow, but of Chia-shan to the southeast, Hsiang is by taste and association very much related to the Wu approach. However, in this album, if we can attribute this to him, he shows the breadth of his taste by imitating the Southern Sung compositions, with their interest in mist, in the wash technique, and in asymmetrical composition. But his brushwork betrays a training from the Wu School.

The Drenowitz collection is richest in the painting of 17th century China, representing the various schools and directions pursued by many artists in that disquieting period. We can see, from the examples in this collection, the continued florescence of the Wu School tradition in Soochow during the 17th century, although none of the painter seems to equal either Shen Chou or Wen Cheng-ming in their achievement. A small fan painting by Ch'en Lo, active in the beginning decades of the 17th century, is a typical work revealing the same delicate and refined style derived from Wen Cheng-ming, while a hanging scroll by Ch'en Huan, dated 1604, probably his best-known extant work, displays his assimilation of the bolder and more creative side of the same master, in the exploration of the potentials of a long, narrow, and vertical format to unfold the drama and movement of the mountain. A snowscape by Chang Hung, dated 1643,⁶ carries the more realistic trend in the Wu School in its interest in the depiction of famous scenic sites in the surrounding area of Soochow to a new romantic and poetic mood.

6. Reproduced in *1000 Jahre Chinesische Malerei*, pl. 74, and Roger Goepper, *The Essence of Chinese Painting*, London, 1963, pls. 74-75.

Another painting in the same vein, an autumn landscape by Hsiang Sheng-mo (1597-1658),⁷ grandson of Hsiang Yüan-pien, is also a combination of an interest in realistic landscape and a nostalgic mood of the literatus. The same interest seems to be achieved in a small landscape by Sheng Mao-yeh, also of the early 17th century, by his introduction of some of the elements from Southern Sung, especially the mist, to heighten the sense of drama and romantic mood from the ordinary scenes. Again, the vitality of the late Wu School is demonstrated in another direction, a landscape in the style of Ni Tsan by Yün Hsiang, dated 1646.⁸ It is an affirmation of the tie between the Wu School and the late Yüan, especially the four great masters. In particular, Ni Tsan, with his purity and simplicity, was regarded by Ming literati artists as the supreme master of the *i-pin* (the untrammelled class), the ultimate expression of *wen-jen-hua* (literati painting). Yün Hsiang's painting is a good example of how later artists can draw endlessly from the same master inspirations for his own work without losing the potential for his own creative expression. Finally, an album by Shen Hao, one of the very few extant works of this late Ming painter and critic, is a good example showing both the strength and weakness of the later development of the Wu School. Of the eight paintings in this album, called *Silent Poetry*, seven are based on past masters, ranging from Ching Hao of the 10th century to T'ang Yin of the 16th. They all reveal the strong interest in past masters, the perpetuation of the style derived from the early founders of the Wu School, and the elegant brushwork of the later painters of this school. The last leaf, a self-portrait depicting himself 'meditating Ch'an under a frosty sky', is a good picture of how the literati painters see themselves in the early 17th century. It is this self-consciousness that marks the beginning of an end of a great artistic tradition in Soochow.

Meanwhile, the achievement of the Wu School inspired so much interest in the surrounding areas that other schools, more or less exten-

7. Reproduced in *1000 Jahre Chinesische Malerei*, pl. 77, and Roger Goepper, *Chinesische Malerei*, Berne, 1967. 8. Reproduced in *1000 Jahre Chinesische Malerei*, pl. 75.

sions of the Wu, sprang up during the 17th century. Most important and influential is the Sung-chiang School. Sung-chiang, located right east of Soochow, is another rich district of the Yangtze River delta, near the present day Shanghai. Its importance as an art center also goes back to the 14th century, when such painters as Ts'ao Chih-po were leaders among literati poets and artists. But the great period of the Sung-chiang School was undoubtedly that of the early 17th century, when it replaced Soochow as the new leader in the world of painting and calligraphy.

The importance of the Sung-chiang School in the history of later Chinese painting cannot be over-estimated. Its greatest contribution lies in its new theoretical foundations established by Mo Shih-lung, Tung Ch'i-ch'ang and Ch'en Chi-ju. Most epoch-making is the theory of the southern and northern schools of landscape painting from T'ang dynasty until Ming, formed by Mo Shih-lung who was active in the last years of the 16th century. It is this theory that gives literati painting a firm foundation in both aesthetic and historical senses as the supreme expression of Chinese painting. In fact, in this theory, the Wu School is depicted as the inheritor of this great tradition. Another major contribution of the Sung-chiang School, for which Tung Ch'i-ch'ang is primarily responsible, is the development of a bold and free brushwork that eventually revolutionizes later Chinese painting. Turning away from the delicacy and refinement of the late Wu School, Tung's use of *pi* (brushwork) is a result of his intense study and analysis of the brushwork of earlier masters, especially those of Sung and Yüan and of his attempt to go beyond their more realistic functions to attain a semi-abstract, pure formal excellence. This is what he means by the statement:

'From the point of view of the wonders of nature, painting is no match for actual landscape. From the point of view of the excellence and exquisiteness of brush and ink, landscape is then no match for painting.'⁹

9. Cf. Osvald Sirén's Translation of the same passage in *The Chinese on the Art of Painting*, Peiping, 1936, p. 138.

The Drenowitz collection is in possession of several important pieces of the Sung-chiang School. One of the rarest pieces is a landscape by Mo Shih-lung (fig. 5) which, according to a colophon, dates to 1575 or before, the earliest dated work known by this artist, when he was probably still in his early twenties. The painting can easily be considered as an example of the Wu School of the late 16th century, still under the strong influence of Wen Cheng-ming. However, there is already something in this painting that seems to have marked the future direction of the Sung-chiang School, for Mo's painting suggests some qualities of Huang Kung-wang's work. It is an interesting direction. During the early part of Ming, the main influence from the Yüan period came from Wang Meng or Ni Tsan, with Wang's qualities very strongly developed in the works of Wen Cheng-ming and Ni's in Shen Chou and Lu Chih and other painters. Eventually, as mentioned before, in the later development of the Wu School, the Ni Tsan qualities, ranked as the *i-pin* in the criticism of that time, seem to have become the supreme ideal of literati painting. However, at the same time, a new interest in Huang Kung-wang, which was tied to the 10th century painter Tung Yüan, gradually became dominant. This direction was probably shaped more in the Sung-chiang School than anywhere else, for which Mo Shih-lung and Tung Ch'i-ch'ang were mainly responsible. Undoubtedly, Huang Kung-wang's works, probably the freest and most spontaneous among those of Yüan artists, fit more into the theories and practices, especially the ideas on brushwork, of this school. Mo Shih-lung's painting thus can give us some indication of the beginning of this new direction, which eventually blossomed in the works of Tung Ch'i-ch'ang and his followers.

Two paintings by Tung Ch'i-ch'ang are in this collection. These two landscapes, painted in 1624¹⁰ and 1625 (fig. 6)¹¹ respectively, are very

11. Reproduced in *1000 Jahre Chinesische Malerei*, pl. 116, and Osvald Sirén, *Chinese Painting: Leading Masters and Principles*, N.Y., 1958, vol. VI, pl. 265 B, and Roger Goepper, *Chinesische Malerei*, Berne, 1967.

similar in style. Executed some fifty years after Mo Shih-lung's painting, they show the culmination of the theories and stylistic development of the Sung-chiang School begun in Mo's ideas. Departing from the sweetness and sentimentality of the Wu School, Tung's paintings exhibit an uncompromising and formidable search for the poetic quality of pure brushwork, sacrificing the representational function of traditional Chinese painting. His achievement became the new foundation from which much of the Ch'ing paintings sprang.

Regarded as the greatest calligrapher and connoisseur of his own time and respected as a high official and scholar, Tung enjoyed a prestige so high that no painter before him seems to have matched. Consequently, his ideas, his style and his taste exerted a tremendous influence on the younger artists of his own time. However, the degree of acceptance of Tung's ideas varies from one painter to another. For example, the two fan paintings by Li Liu-fang (1575-1629), one of them dated 1617, in the Drenowitz collection, show close affinity to Tung Ch'i-ch'ang's works, although he tends to be more abstract and more simplified rather than oppressive in the master's works. On the other hand, the album of Ku Shan-yu, grandson of Ku Cheng-i, one of the founders of the Sung-chiang School, is more pleasing and sentimental, quite close to the works of the late Wu School. Another album, of 12 leaves, by Shen Shih-ch'ung, a good friend of Tung Ch'i-ch'ang, is the work of an artist whose interest lies more in absorbing the spirit of Sung and Yüan masters, a major aspect of the Sung-chiang theory, than in exploring the potentials of pure brushwork. In other words, the brushwork of Shen Shih-ch'ung is still closer to that of the Wu School rather than that of Tung Ch'i-ch'ang. In the same way, the hanging scroll dated 1630, by Pien Wen-yu,¹² another close friend of Tung, displays a style that blends Tung's innovations with the traditional refinement of his native Soochow. The contrast between the approach of Tung and those of his friends and followers in the Sung-chiang district gives us a good idea of the

12. Reproduced in Speiser, *op. cit.*, pl. 63.

greatness of Tung Ch'i-ch'ang and of the theories of the Sung-chiang School.

The most important political event in the history of 17th century China is undoubtedly the rise and the eventual dominance of the Manchus over the whole of China during the middle of the century. In spite of the persistent decadence and corruption of the Ming administration from late 16th century until its downfall in 1644, the Manchu conquest was a tremendous shock to the literati, especially those who saw this event in their advanced age. This group of intellectuals are generally called 'The Ming Loyalists' or 'The Remnant People of Ming'. Even though they spent the last ten or twenty years under the Ch'ing dynasty founded by the Manchus, their outlook and their ideas were still those of the previous dynasty. In the same way, many painters in this group show a clear-cut late Ming style.

The Drenowitz collection has several paintings that belong to this category, all showing the diversity of style with some geographical overtones. A long handscroll by Hsiao Yün-ts'ung, dated 1656, entitled *Returning Home to One's Origin*,¹³ is a panoramic landscape depicting actual sceneries of the Wan-ling district of Anhwei province. The painting is in reality an imitation of a composition by a Ch'an monk living in that district, whom Hsiao visited shortly before painting the scroll. A native of Anhwei himself, Hsiao's style is typical of the Anhwei School to which also belong such prominent 17th century painters as Cha Shih-piao and Monk Hung-jen whose style originated from Ni Tsan. In this scroll, Hsiao's style can best be described as that of poetic realism, a blend of the literati approach with topographical depiction. Yet the sense of purity and sublimity so typical of the Ni Tsan tradition is still a clear mark of Hsiao's painting.

Another handscroll in this collection, a landscape in the style of Huang Kung-wang, dated 1650, by Lan Ying (1585-1664),¹⁴ is an inter-

esting work in relation to the Chinese view of art history. Lan Ying has generally been regarded by Chinese critics as the last major figure of the Che School, referring to the group of painters from Chekiang province that derived from the Southern Sung Ma-Hsia style and flourished in the 15th century. But Lan Ying seems to have two sides. On the one hand, he painted a large number of grand landscapes, usually after some Sung masters, in a style that seems to be close to that of the Che School. On the other hand, as a good friend of Tung Ch'i-ch'ang, he was also very much affected by the new trends in the early 17th century. This scroll is a good example of the more literati expression in Lan Ying's art.

One of the most impressive paintings in the whole Drenowitz collection is undoubtedly the panoramic landscape by Kung Hsien (fig. 7)¹⁵ who, in spite of the fact that he lived until 1689, still always regarded himself as a Ming loyalist. Though evidently influenced by the ideas of Tung Ch'i-ch'ang, he did not merely follow the late Ming master's style, but attempted to carry further the search for a style that could best express his inner feeling. While members of the Nanking School, of which he was the leader, did not paint in a common style, he developed a dark, sombre approach that fully reveals his feeling of loneliness and his outlook of the world as a vast, tragic and desolate land. This panoramic landscape is one of the most powerful and dramatic expressions of Chinese art, a work that matches the tragic grandeur of such world masterpieces as Michelangelo's religious paintings and sculpture and Beethoven's symphonies.

The legacy of Tung Ch'i-ch'ang can best be seen in a group of painters living in the district of T'ai-ts'ang, not far north of Sung-chiang,

during the 17th century. Two artists, known as the two earlier Wangs, Wang Shih-min (1592-1680) and Wang Chien (1598-1677), were pupils of Tung Ch'i-ch'ang and Ch'en Chi-ju and had the fortunate opportunity to study the collection of paintings of old masters in their hands. As a result, they took the theories of Tung very seriously and sought to practice especially a strong imitation of Sung and Yüan masters. This is their classicism. However, while these two Wangs' outlook seems to be directed mainly toward the past, that of the two later Wangs, Wang Hui (1632-1717) and Wang Yüan-ch'i (1642-1715), is more toward the future. In a broad sense, Wang Hui was the fulfillment of Tung Ch'i-ch'ang's idea of a 'great summation' and of Wang Chien's ideal in his endless study of the great masters. The landscape by him in the Drenowitz collection, dated 1695,¹⁶ is a good representation of his mature style, the result of a long period of intense study of Sung and Yüan masters and of his teachers. On the other hand, Wang Yüan-ch'i is the more original of the two. Grandson of Wang Shih-min, he had spent his youth in absorbing the literati tradition of the T'ai-ts'ang and Sung-chiang Schools, but went on to develop a style of his own in combining the elements from both the Ni Tsan and Huang Kung-wang traditions. Two paintings by Wang Yüan-ch'i in the Drenowitz collection, dated 1706¹⁷ and 1708 respectively, are good examples of this development. Another painter of the same outlook, Wu Li (1632-1718), who was a fellow-pupil under Wang Shih-min, is often linked with the Four Wangs since his approach is very similar to the group. In spite of his conversion to Catholicism, he seems to have not been much affected by the Western approach to painting. The painting in the Drenowitz collection, dated 1693 (fig. 8),¹⁸ after he went through

the intensive Christian training in Macao, is still a typical product of the classical tradition. Deriving from the Yüan artist Wang Meng, he shows an interest in the more crowded composition, more complex mountain formations, and more intricate relationship between shapes and areas, in contrast to the simpler and purer approach of Wang Yüan-ch'i.

The success of this group of early Ch'ing painters under the art-loving patronage of Emperor K'ang-hsi inspired a great number of followers in the 18th century. Aside from the fact that both Wang Hui and Wang Yüan-ch'i became the emperor's favorite painters and served for some time in the court, both appealed to the younger artists in their ability to absorb the classical tradition of painting and to develop their own personal styles. The followers of Wang Yüan-ch'i are known as the 'Lou-t'ung School', derived from the home district of the master. Several representatives of this school are included in this collection. A handscroll by Huang Ting (1660-1730),¹⁸ a pupil of Wang Yüan-ch'i, shows that he was probably the most accomplished painter of this school. Painted in 1716, the scroll moves from an open, broad view of lakes and mountains gradually to a complex formation of high mountains and waterfalls. He has absorbed the personal quality of Wang Yüan-ch'i's brushwork, but also the delicate taste of Wang Hui, forming the basic strength of his style. An album of landscapes by one of Huang's pupils, Chang Tsung-ts'ang (1686-1756), is a good example of how much Wang Yüan-ch'i's brushwork was imitated in the time of Emperor Ch'ien-lung. Dated 1748, its various leaves are Chang's interpretations of a number of Sung and Yüan masters, through the style of Wang. Such a practice is standard of the classical school of painting. In contrast, a hanging scroll by Wang Ch'en (1720-1797),¹⁹ great-grandson of Wang Yüan-ch'i, dated 1778, in the style of Wu Chen of the Yüan dynasty, shows that he is trying to develop out of the more robust side of his ancestor.

19. Reproduced in *Shen Chou ta kuan*, Shanghai, 1912, I, *Shina Nanga Taisai*, vol. IV, suppl., p. 102; *Shen-Chou kuo kuang chi*, vol. 1.

The followers of Wang Hui are called the 'Yü-shan School', again a reference to the home district of the master. The Drenowatz collection has an album by his great-grandson, Wang Chiu (act. late 18th c.),²⁰ showing him as a true inheritor of the master's style. Dated 1759, the album shows leaves in the style of various Sung and Yüan masters. However, one can easily see that in these studies Wang Chiu was more interested in absorbing the style of his great-grandfather rather than those of the classical masters directly, but he shows almost the same breadth and versatility of Wang Hui himself.

One of the major exponents of this classical trend of landscape painting in the 19th century is Tai Hsi (1801-1860), a scholar, high official and accomplished painter. The Drenowatz collection happens to be in possession of two albums by this artist, done in 1857 and 1858, both dedicated to the same person, Mo-yüan. Both albums, in 10 and 12 leaves, are in the style of Sung and Yüan masters, very similar to those of the other albums. However, both betray the same origin of his style, which is that of Wang Hui. Tai's style, with its subtle use of ink tones, delicate brushwork patterns, simple and sure composition, still reflects the fine taste, deep feeling, and intellectual breadth of the literati tradition. Two small paintings, probably originally part of an album, by a contemporary of Tai Hsi, Ch'ien Tu (1761-1844), dated 1841, exemplifies a more independent line within this approach. Instead of following the more recent masters, he went back to the 16th century painters Wen Cheng-ming and Ch'iu Ying as his models. This new attempt brings a new feeling to his paintings. Amidst the predominance of the influence of the Four Wangs, his style does create a dream-like effect, and express a nostalgia for an age long past.

In contrast to the classical schools, the trend toward individualism in painting, already evident in late Ming, gained momentum after the Manchu conquest of China. Strongly attached to Ming emotionally, and deprived of the opportunity for an official career, many scholars and

²⁰. Reproduced in *1000 Jahre Chinesische Malerei*, pl. 100.

painters turned hermits and monks, retreating from the world. While literati painting found great acceptance in the Ch'ing court, they strove for more independence from the imperial patronage, from the classical tradition, and from conventional success. The result is a very original group of artists achieving a new plateau in creating new styles of their own. Many of them are known for their eccentricity. Most famous of them are the several monk painters, Chu Ta, Shih-t'ao, Shih-ch'i and Hung-jen. All born in late Ming, they all matured and developed in the Ch'ing period. The self-conscious birds and animals of Chu Ta and the violent landscapes of Shih-t'ao, are the most typical expressions of these two eccentrics, who were descendants from the Ming imperial line. A reflection of the eccentricity of this group of artists is a painting dated 1767 by Yao Sung,²¹ an artist from Anhwei, the area where Monk Hung-jen and Hsiao Yün-ts'ung lived. The painting, a variation of a theme originated from Ni Tsan, but derived more directly from Hung-jen, creates a strong sense of fantasy by its angular shapes or mountains and rocks, its strange, searching pines, its flat space, and its rhythmic brushwork. It is a dream world of the literati out of their memories of the past and their reflections of the present.

The innovations of this group of individualists seem to have brought about a special school of eccentric painters associated with Yang-chow, the most prosperous city on the north bank of the Yangtze River in the delta. As the city is located at the crossing point between the Yangtze and the Great Canal linking Peking and the Chiang-nan area, Yang-chow had been known for its wealth and trade since the T'ang period. However, culturally it never matched the importance of some other southern cities such as Nanking, Hangchow or Soochow. In painting, it never had a school of its own as in other cities such as Sung-chiang, T'ai-ts'ang and others. But during the 18th century, Yang-chow rose to become the richest city of China, controlling such important trades as rice, silk and salt. Some of their merchants are said to be worth billions. As such, it

²¹ Reproduced in Cahill, *op. cit.*, no. 14; *The Arts of the Ch'ing Dynasty*, London, 1964, no. 38.

attracted many artists to the city. In contrast to the classical taste of Peking, the Yang-chow merchants showered their patronage to the eccentrics, especially the group called 'The Eight Eccentrics of Yang-chow',²² which is well represented in the Drenowatz collection.

A rare album (fig. 9) dated 1736,²³ the first year of Emperor Ch'ien-lung's long reign, is a comparatively early work of Chin Nung (1687–after 1764), since he is said not to have painted until he was 50 years old. While his style in this album is not so free as his later works, it is almost a tour de force of his talent in both painting and calligraphy. In each of the compositions, half of the space is taken up by painting illustrating either an ancient poem or essay which is written in his characteristic writing style. Instead of following the Four Wangs' approach, he chose, according to his inscription, as his model Ch'en Hung-shou, an earlier resident of Hangchow from which he came. Already, in his rock forms, his unconventional compositions and his blend of houses and landscape, he shows a great sense of freedom in his approach.

Another outstanding album of landscape paintings (fig. 10), now mounted in two separate handscrolls, is the work of Huang Shen,²⁴ another of the eccentrics. While he is generally known as a figure painter, he is also a very original landscape artist. All the eight leaves are scenes of specific locations along the Yangtze river. In spite of this tie with reality, the style is typically his own, with nervous, sketchy lines combined with occasional reference to models such as Mi Fu and Ni Tsan. It is, undoubtedly, the boldness of his brushwork that earned him the fame of being an eccentric.

Many of the eccentrics were not landscape painters. Although Hua Yen (1682–after 1755) did paint many landscapes of very imaginative or even fantastic nature, he is quite well known as a bird and animal

painter. Two small paintings in the Drenowatz collection, probably once leaves of an album, show his originality in a subject very old in China. Perhaps in this kind of painting, it is not so much the eccentric as the creative treatment of an old theme that earned him his fame in Yang-chow. His birds and cranes all show a great sense of vitality and aliveness.

As a whole, the Chinese paintings in the Drenowatz collection constitute a genuine reflection of the Chinese taste for their great literati tradition. While the paintings of the T'ang and Sung are no longer available except in the Palace collections in China and a few other collections abroad and Yüan works are also quite rare, paintings of the Ming and Ch'ing periods have now gained their rightful place in Western connoisseurship of Chinese art. As works of later periods, they represent a more advanced stage of the Chinese artistic development in the search for values beyond mere realistic depictions. In the Chinese respect for the past, they reveal a strong attachment to the great traditions established by Sung and Yüan masters but also try to interpret them with new feeling and insight so that the past will bring new meaning to the present. Thus the many simple and freely executed paintings, almost casual in appearance, are works of extremely rich content for the Chinese literati. They are the objectifications of their desires, dreams and fantasies, their hopes and despairs, and above all, their attempts to come to terms with the changing world. They may be expressed in more concrete images of mountains, rivers, rocks and trees, often rich in their associations with past masters, or in more personal, even abstract elements of form and pure brushwork, often filled with great vitality and freedom. It is with these ideas in mind that the Drenowatz collection can best be appreciated, not only as a means to understand the mind of Ming and Ch'ing China, but also as a mirror to approach the culture and art of the modern West.
