# **First-order evolution in geodesy and industry**

Modern technology has come up with a new precision level, the **Wild N3**, designed to bring the highest accuracy to the most varied tasks: first-order levelling for geodetic control, deformation measurements, determining subsidence and monitoring crustal movements. It's perfect too for industry and laboratories: for checking, aligning and positioning machinery, and for measuring inclinations.

The powerful **panfocal telescope** has over  $40\times$  magnification at normal sighting distances, yet it will focus to a scale only **30 cm** (12 inches) from the objective. The field of view widens at short distances. And it's an alignment telescope with remarkable stability of the line of sight.

With the calibrated tilting screw, small angles and changes in inclination can be measured with micro-

meter accuracy for optical tooling purposes as well as for river crossings in geodesy. The autocollimation eyepiece converts the N3 into an autocollimation instrument; the laser eyepiece transforms it into a laser level.

The **Wild N3** is an ultramodern precision level. From its predecessor it has inherited its unmatched accuracy – a standard deviation of  $\pm 0.2$  mm for 1 km double run levelling – and its absolute reliability.

*Original Swiss made*  
**SCHMIDT**

Use the ORIGINAL

## Concrete Test Hammer **SCHMIDT**

Models N and NR for non-destructive testing of the concrete quality in the finished structure

*Original Swiss made*  
**SCHMIDT**

stands for:

- constant high product quality
  - Swiss Finish
- spare parts guarantee, even for older instruments
- possibility of accurate calibration
- calibration on assured and unchanged basis for 25 years

a PROCEQ product from Switzerland

## Reinforcement Detector **PROFOMETER**

PROFOMETER for precise and non-destructive testing of reinforcement in completed concrete structures.

- Determination of position, direction and quantity of main and secondary reinforcement
- Exact measurement of concrete cover up to 120 mm, even with densely packed reinforcement
- Determining the locations suitable for drilling dowel holes
- Estimates of rod diameter
