The United Nations Industrial Development Organization (UNIDO), carries out a wide programme of technical assistance and investment promotion for industries in developing countries as part of the United Nations Development Programme (UNDP).

UNIDO maintains a general roster of experts classified by experience, training and language ability, which is consulted when specific positions are created for project work.

In the field of timber construction, UNIDO is anxious to add suitably qualified experts to their roster, especially those with working knowledge of Spanish and/or French, as well as English – the three official languages in which technical assistance is given. Any timber or construction engineer interested in being considered for such work – either as individuals contracted to UNIDO or as consultants on temporary loan from their firm or organization – should contact:
