Nutzungsbedingungen

Die ETH-Bibliothek ist die Anbieterin der digitalisierten Zeitschriften auf E-Periodica. Sie besitzt keine Urheberrechte an den Zeitschriften und ist nicht verantwortlich für deren Inhalte. Die Rechte liegen in der Regel bei den Herausgebern beziehungsweise den externen Rechteinhabern. Das Veröffentlichen von Bildern in Print- und Online-Publikationen sowie auf Social Media-Kanälen oder Webseiten ist nur mit vorheriger Genehmigung der Rechteinhaber erlaubt. [Mehr erfahren](#)

Conditions d'utilisation

L'ETH Library est le fournisseur des revues numérisées. Elle ne détient aucun droit d'auteur sur les revues et n'est pas responsable de leur contenu. En règle générale, les droits sont détenus par les éditeurs ou les détenteurs de droits externes. La reproduction d'images dans des publications imprimées ou en ligne ainsi que sur des canaux de médias sociaux ou des sites web n'est autorisée qu'avec l'accord préalable des détenteurs des droits. [En savoir plus](#)

Terms of use

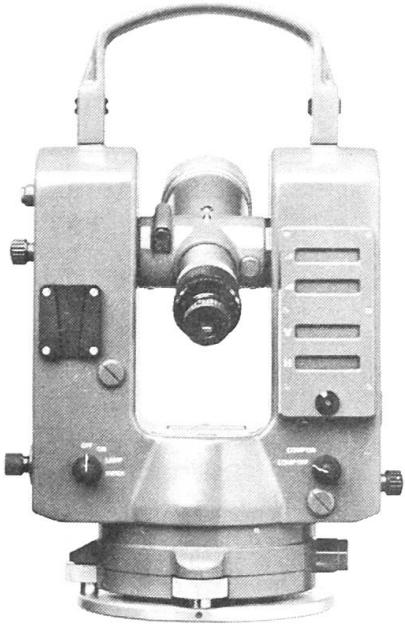

The ETH Library is the provider of the digitised journals. It does not own any copyrights to the journals and is not responsible for their content. The rights usually lie with the publishers or the external rights holders. Publishing images in print and online publications, as well as on social media channels or websites, is only permitted with the prior consent of the rights holders. [Find out more](#)

There are places where only the Kern E 2 will give you accurate surveying results.

Let's assume your surveying assignment is from a point that simply won't stay put. A drilling rig, for example, that rocks with the waves. Or a highway bridge that keeps swaying and vibrating.

Specially for places like this you can use the **E 2**. It automatically compensates the effects of levelling errors on both vertical and horizontal axes. And further more: only the **E 2** fully compensates vertical axis inclinations with one-second accuracy and in two instrument axes at the same time.

The fact that it is splashproof and dust-tight might also come in handy in such extreme situations.

Wild-Leitz RMS2000:

The vital step towards better quality-assurance

Wild Heerbrugg and Leitz Wetzlar are world leaders in optics and metrology. They have now combined their expertise to produce RMS 2000, a fast, non-contact measuring system for quality-assurance and testing.

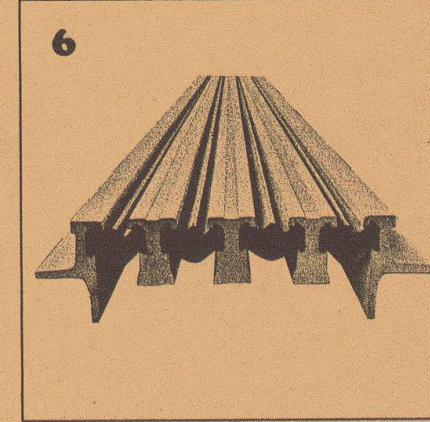

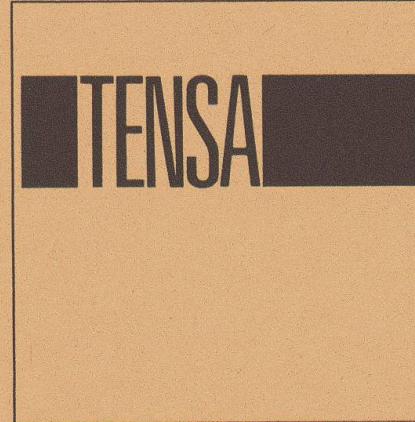

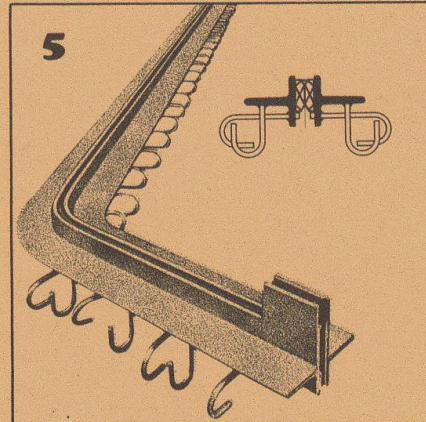

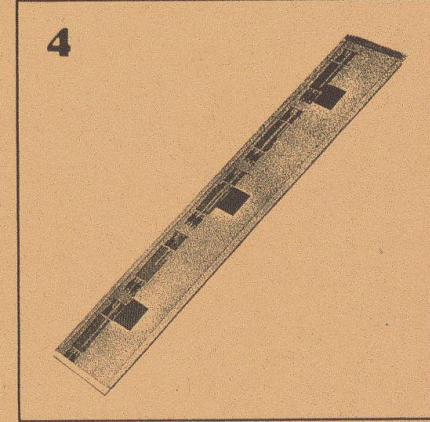

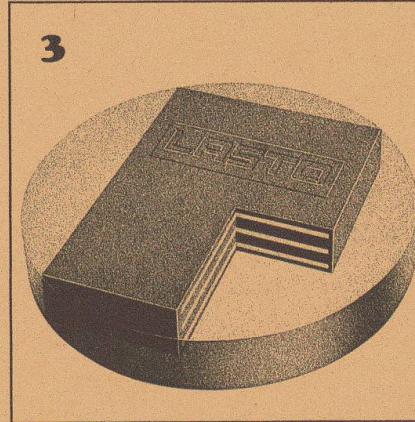

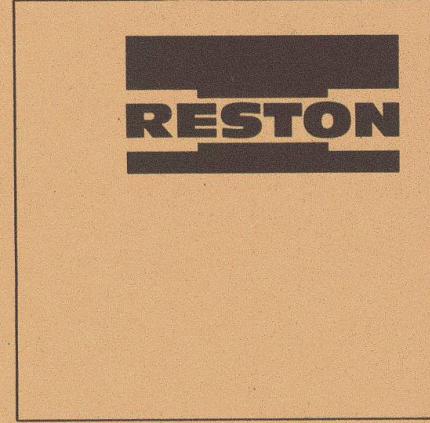

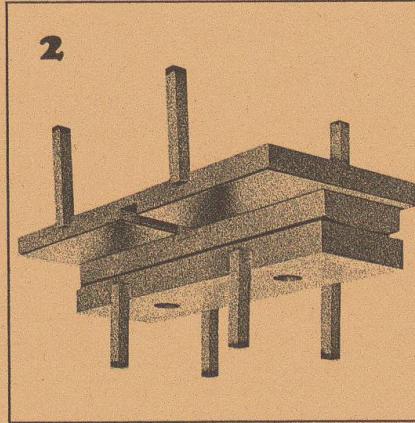

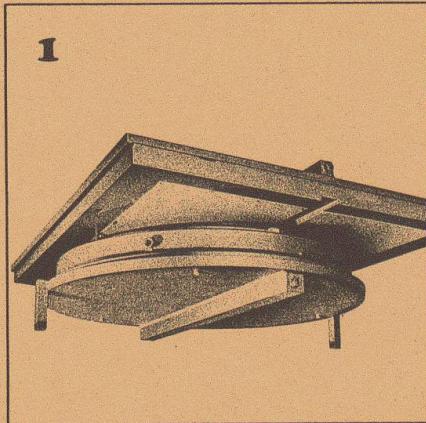

The system consists of two or more Wild T2000 or T2000S informatic theodolites and a desktop computer, which processes the measurements with software based on the well proven Leitz MESCAL.

RMS 2000 offers quality-assurance engineers the following features:

- **Mobility:** RMS 2000 can be taken to the object, thus saving time. The object may be any size.
- **Accuracy:** The easy-to-use electronic theodolites ensure high accuracy.
- **Real-time results:** Even the most complex elements can be computed immediately for comparison with nominal values.
- **Flexibility:** Objects sensitive to touch or located in hazardous environments can be easily and accurately measured. Many

industries, from shipbuilding to space technology, automotive manufacture to offshore oil construction, will find RMS 2000 the quality-assurance system they need.

Contact Wild Heerbrugg or Leitz Wetzlar to find out what RMS 2000 can do for your quality-assurance. ■

1
RESTON Pot Sliding Bearings
are highly suitable for installation in bridge structures. They feature a low-profile design, low weight and high loading capacity.

2
RESTON Linear Tilting and Sliding Bearings
are a combination of normal linear tilting bearings and PTFE sliding bearings and are suitable for installation in bridge structures.

PROCEQ SA
Riesbachstrasse 57
CH-8034 Zurich

3
LASTO-BLOCK Bearings
are suitable for building, civil engineering and bridge construction applications. Their simple form allows easy installation.

4
LASTO-STRIP Bearings for Buildings
were especially developed for building constructions. They are particularly suitable for movement compensation between concrete slabs and load-supporting walls and prevent structural cracking.

5
TENSA-ACME Roadway Construction Joints
are highly suitable for installation in traffic levels (parking lots, bridges, airport areas etc.). Dilatation up to 60 mm.

6
TENSA-LASTIC Roadway Construction Joints
meet all the requirements that can be made in bridge engineering of a modern joint design. They are rugged and watertight. Dilatation range 60 mm and bigger.
