Dillingen Steel Works Prefabrication Process

300 years have passed since **Dillingen's** beginnings as a steel maker. The spirit of the craftsman which was a key factor in the growth of the company from a humble shop to its modern day size, is still part of the vitality of the company.

Using the company's background as one of the leading producers of **reversing mill heavy plates**, the processing department is able to offer all the advantages of both a manufacturer and prefabricator of heavy plate.

Prefabricated items are supplied in a wide range of products, to the closest tolerances in the plate field, and with special designs to suit the needs of those customers who may not be equipped to process or handle such heavy and/or wide plates. (Max. width 5200 mm or - 205").

Included in the processing facilities and products are:

- Flame cutting machines for sketch oxy cut parts, such as **bottom annular ring segments** or **roof plates** for

self-supporting umbrella or ellipsoidal roofs as well as **compression bars** and **other accessories**.

- An edge milling machine to **square and bevel** plates for weld preparation with all types of grooves and **edge styles**. Up to 4500 mm wide and 19000 mm long.
- Several pyramid roll-bending machines for cold or hot forming of cylindrical steel **shell plates** for **storage vessels, storage tanks, stack liners, and silos**.
- A 2250 MT hydraulic press for the production of single piece and multisegment dished **heads, spherical segments** as well as a wide variety of cold or hot formed shapes.
- Surface treatment facilities for automatic or hand shot blasting and pre-priming are available.

Dillingen's manufacturing department has the ability to produce all kinds of prefabricated material for petroleum storage tanks, refinery vessels, elevated water tanks, storage tanks and related operating systems for cryogenic and low temperature gases.

IF THIS COMBINATION WERE YOURS, WHAT WOULD CHANGE?

You would be able to obtain readings of angles, distance, and height difference, instantly, digitally, to 0.001 gon and 1 mm accuracy.

You would be able to measure angles for seven hours at a stretch, or 250x angles and distance, without needing an external battery.

You could be instantly ready to measure angles (anticlockwise if required) without time-wasting initialization.

You would be able to work faster and more competitively than ever before.

With a GRE 3 connected, you could measure and record at the touch of a single key.

You would no longer need to have fieldbook entries copied out at the office.

With an electronic tacheometer combination weighing only 7 kg, you could cope with any task.

You could also solve complex problems directly in the field.

And all your existing Wild theodolite accessories would fit the T 1000.

Your measurements would be still more accurate and even more reliable.

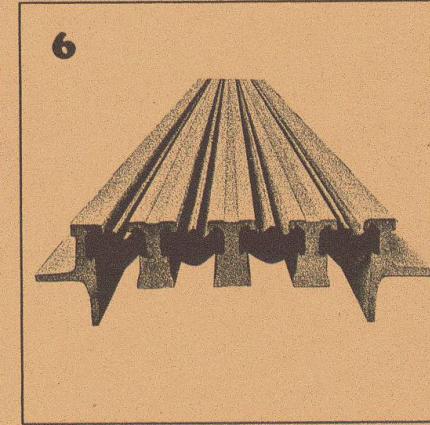

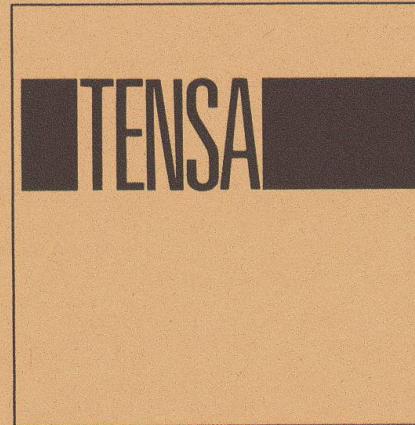

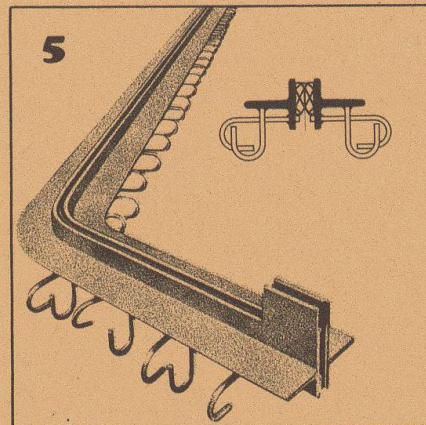

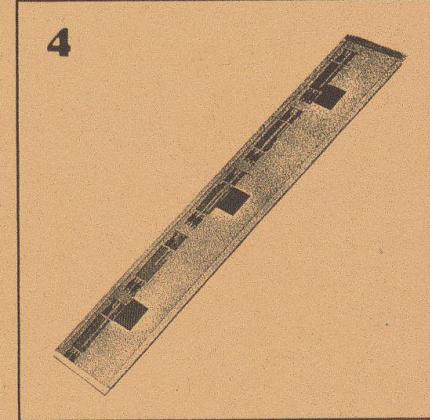

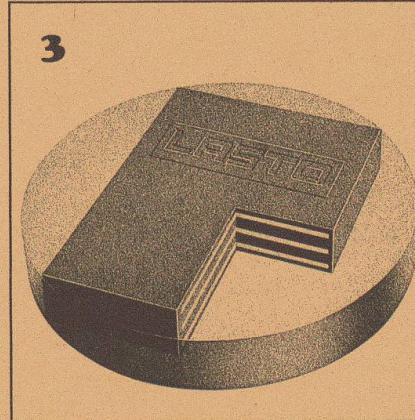

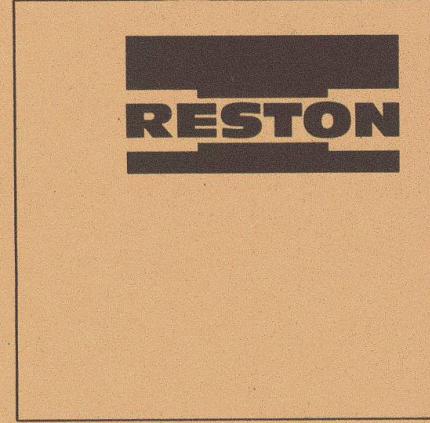

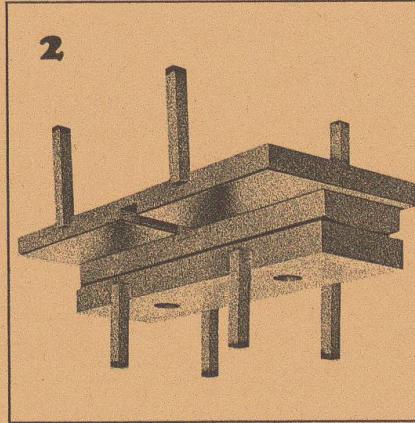

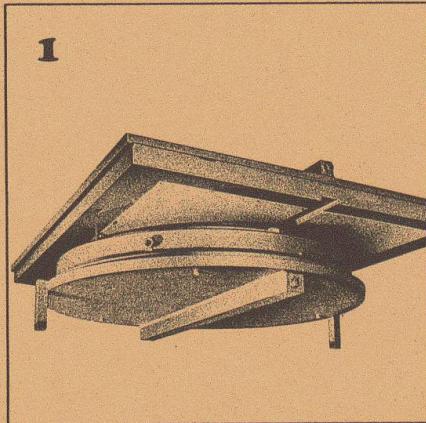

You would have more time for other things.

Ask for your documentation right away: on the Wild T 1000 THEOMAT theodolite, the Wild DI 1000 DISTOMAT, and the Wild GRE 3 electronic data terminal. ■

HEERBRUGG**

1
RESTON Pot Sliding Bearings
are highly suitable for installation in bridge structures. They feature a low-profile design, low weight and high loading capacity.

2
RESTON Linear Tilting and Sliding Bearings
are a combination of normal linear tilting bearings and PTFE sliding bearings and are suitable for installation in bridge structures.

PROCEQ SA
Riesbachstrasse 57
CH-8034 Zurich

3
LASTO-BLOCK Bearings
are suitable for building, civil engineering and bridge construction applications. Their simple form allows easy installation.

4
LASTO-STRIP Bearings for Buildings
were especially developed for building constructions. They are particularly suitable for movement compensation between concrete slabs and load-supporting walls and prevent structural cracking.

5
TENSA-ACME Roadway Construction Joints
are highly suitable for installation in traffic levels (parking lots, bridges, airport areas etc.). Dilatation up to 60 mm.

6
TENSA-LASTIC Roadway Construction Joints
meet all the requirements that can be made in bridge engineering of a modern joint design. They are rugged and watertight. Dilatation range 60 mm and bigger.
