5. TEPCO Ohtsuka Branch, Tokyo (Japan)

Architect and Engineer: Tokyo Electric Power Co., Inc. and Tokyo Electric Power Service Co.
Contractor: Takenaka Komuten Ltd.
Works' duration: Sep. 1978–Nov. 1979, 15 months
Service date: November 1979
Size: Total floor area 5477 m²; B1/4F

This building was meant to be a "model energy conservation building". At the beginning of the planning, the following goals were set:

- comprehensive energy conservation measures are to be adopted

- energy conservation design procedures are to be disclosed
- detailed measurements of the energy consumption both during and after the construction are to be carried out.

Fig. 1 shows the plan and elevation of the building. Fig. 2 shows the major energy conservation methods which were introduced to this building. The main component of the heating and airconditioning system is heat pump.

The energy conservation rate was estimated to be 47 percent, and the result shows the goal was almost achieved as shown in Fig. 3. This building has been used as an ordinary branch office of TEPCO since its completion.

(T. Maekawa)
