and compositors' room – to be connected technically as closely as possible so as to shorten distances.

The printing press is arranged on the ground floor as a large hall surrounded in a U-shape by the individual departments of the bookbinding section. The building is a steel concrete frame.

Ship Passenger Station in Helsingfors (pages 31–34)

In a competition organised by the city of Helsinki for the construction of a new ship passenger station in the south harbour the first prize was won by architects Hytönen and Luukkonen, who were commissioned to carry out the winning project. The building programme was as follows: entrance hall, customs hall, rooms for checking passports and storing passengers' luggage, ticket office, foreign exchange counter, newspaper stall, restaurant, public waiting rooms, police offices and a first-aid station. The basement was also to contain store-rooms for customs goods.

Students Hostel Extension at The Technical College, Stockholm (pages 35–39)

The problem was to enlarge considerably the dining rooms and club premises in

direct connection with the corresponding rooms available in the old students' hostel, and to build a new kitchen on the same floor as the dining rooms, new administration rooms, a new flat for the caretaker, and finally a large number of new study cubicles. The new building automatically involved the partial reconstruction of the old students' hostel.

The building is constructed in reinforced concrete with external insulation in saporex. The elevations are built partly as frame constructions with panelling in brick or wood.

Kindergarten in Le Havre (pages 40–41)

In connection with the reconstruction of a group of school buildings in a workers' district of Le Havre a kindergarten with five classrooms had to be built as well as a room for infants, a rest-room and a dining-room with auxiliary rooms. This group of school buildings also contains a primary school with 34 classrooms and a building to accommodate teachers. The building is constructed on concrete foundations, all the brickwork of the walls being walled up without plaster on either side. The roof contains a ceiling of copper plate, insulated by glass wool mats placed above the suspended underceilings.
