With euros in the hand through Switzerland

Soon almost the whole of Europe will be a single monetary area. This means that the currency of the European Monetary Union, the euro, will be a reality for Switzerland too.

t the beginning of 1999, European Monetary Union (EMU) will set ing a fairly wide EMU. They are at present assuming that all EU states except Denmark, Greece, Sweden and the Bär.

Urs Walter*

United Kingdom, will take part - even if the criteria of the Maastricht Treaty will have to be fudged for some of them. This will be particularly the case for budget deficits, although interest rates have now converged substantially and have stabilised monetary relationships.

With 372 million inhabitants and an economic output of US\$ 8,600 billion 2002 the euro will be the sole means of payment within it, so that Switzerland will then be isolated not only

For tourism the euro is coming

In future travellers in many parts of Switzerland will be able to pay with the Euro. "The Euro will be accepted by the tourism branch very quickly and will become a second currency", Rolf-Peter Pfaff, head of Central Switzerland Tourism in Lucerne, is sure of it. Bankers and others operating in tourism are also assuming that, at least in holiday resorts, the Euro will soon become a parallel currency. But for many visitors it does not matter one way or the other: they pay in their own currencies anyway using credit

*Urs Walter is a freelance journalist in Berne.

Facilities certainly...

Thanks to the euro, businesses and travellers will realise economies by dealing in a single currency. Some currency traders will be on the losing end, but all others will save with the euro. For Swit- weight of its member states by fiscal up shop. Most analysts are expect- zerland, such savings will amount to about Sfr. 5.8 billion, estimates Hans Kaufmann, chief analyst at Bank Julius

will be even more marked on competidifference in price would leap to the centage points. If Swiss interest rates eye. The ratio would be 58 to 44 to 52. This means that the book is a third high rate of both public and per year, the EMU will be the biggest dearer in Switzerland than in Germany. private indebtedness would, single market in the world. From July It will not take long for price conver- according to chief analyst gence to set in, particularly in Switzerland where many people live very close Sfr. 20 billion in higher to the frontiers. Those living in Basle, interest costs. This for example, tend to possess three would have a negative purses for shopping in three countries.

... but high additional costs

Consumers will be happy to find that in high-price Switzerland many price bastions will fall. But this will also Kaufmann draws the conclumean a further blow to a domestic eco-sion from this that nomy which has thus far been protected Switzerland from the chill winds of world markets. could not afford The increased pressure on prices will the consequences certainly darken the economic climate of such a link to at the outset, even though those in the euro - and favour of trade in goods and services certainly not that being as liberal as possible see new opportunities for progress in the longer

Whether Switzerland emerges as a winner or loser will depend on the strength of the new currency. If the European central bank achieves real independence and

politically but also in economic terms. succeeds in following a tight monetary The consequences of this cannot yet be policy, then the Swiss franc and with it all Switzerland will face relatively quiet times ahead. But if the new central bank decides to assist in solving adjustment problems between regions with different economic development levels by printing money, then the Swiss franc will soar. In contrast to the USA, the EU does not cushion the varying economic measures and compensation payments.

Adjustment means extra cost

The effects of the giant single market A weak euro will mean a flight into the Swiss franc. This will drive up its value, tion, and consequently on prices. The which will be poison to exports and various currencies we see today serve to tourism. But the creation of a link disguise huge price differences. For between the Swiss franc and the euro example, a best-selling book may have would also bring high adjustment costs a printed price of 44 Swiss francs, in its train. In particular, it would mean 44 German marks and 321 Austrian the loss of the present interest rate schillings. If the euro were used, the advantage over Germany of two perwere to rise to the EU level, the Kaufmann, result in about

of joining EMU. But Peter Buomberger, "However, we would still pay our franc. "Historically speaking", he says, out by foreign payment methods only in periods of extreme inflation". Since the SNB intends to maintain monetary stability, the Swiss franc should therefore in his view survive.

The single currency in everyday life

The euro is progressing, so let's open our eyes!

Switzerland is outside the European Union, and it will not take part in the great adventure of the single currency. But all Swiss people - consumers, tourists, savers and company employees - will be affected by the creation of

> he single currency will be created in two stages. On January 1, 1999, the euro will not yet exist in the form of banknotes or coins. During a transition period of three years, it will be a 'notional' currency, written down he intends to purchase in the euro

Albert Tille *

in the form of bank accounts and stock market prices, and it will be used as a means of payment only by those companies which so desire.

Consumers will have time to get ready for the new European currency. For three years, they will still pay for their purchases or hotel rooms in lire, marks, or florins. For them, the real change will come with the introduction

*Albert Tille is a journalist with Radio Suisse

further six months, euros will circulate in parallel with the old national currencies - which will then be gradually withdrawn from circulation. That will be the period during which we shall have to get used to the new prices. Comparison will be facilitated by means of double pricing in all businesses in countries using the single currency.

This double pricing may also be used in parts of Switzerland, e.g. in tourist resorts and frontier zones. Every consumer will have to calculate the value of all the goods and services zone on the new basis. Conversion tables will certainly be available to help with this task.

No compulsion, but no prohibition

Apart from paying particular attention when the new currency arrives, consumers and tourists will not have to take masses of precautions. On the contrary, the process will be made as simple as possible for them. They will be able of banknotes and coins. And for a to manage throughout a large part of Europe just by buying euros before they set out. The number of foreign exchange transactions will be reduced greatly, so there will be savings on com-
