A new catalogue of leaf beetles (Coleoptera, Chrysomelidae) from Nepal

by Eva Sprecher-Uebersax

Abstract. A new and updated catalogue of Chrysomelidae from Nepal is presented. As of this moment, there is a total of 1037 species. The first catalogue, with 797 species, was published by Lev N. Medvedev and Eva Sprecher-Uebersax in 1999. Since then, many new species have been described and recorded in Nepal. New publications and data are included and 117 species are illustrated.

Keywords. Coleoptera – Chrysomelidae – Nepal – distribution – faunistics – catalogue

Introduction

The first catalogue of Chrysomelidae from Nepal, with 797 species, was published by MEDVEDEV & SPRECHER-UEBERSAX (1999). Since then many new species have been described and recorded in Nepal. The rising number of species prompted the publication of this new, updated catalogue. Furthermore, several taxonomical changes have been made since the last catalogue. Many new publications and data are included. The species number is currently 1037, an increase of nearly a quarter since 1999, and 117 species are illustrated with photographs.

The new catalogue represents the current state of knowledge of Nepalese Chrysomelidae. It cannot be complete, as new species are constantly being found and described. Therefore, this second catalogue contains what species are actually known, but new material will be added in future. New records for Nepal and species new to science will be discovered in the near future. The number of species recorded in Nepal is increasing; nearly every year new entomological expeditions go to Nepal, mainly German and Japanese.

The distribution of leaf beetles is described within Nepal with reference to the zones of the country, beginning in the west (Tab. 1, Fig. 1). The altitude is considered in 1000-m steps (Tab. 2). A general distribution is provided, starting with the countries neighbouring Nepal and extending to others in the Palaearctic region. As the distribution in the Oriental region is less than clear in some cases, it is mentioned only as “Oriental region” without specifying countries.

Some species are added without knowledge of their distribution within Nepal. They are mentioned in the catalogue of Palaearctic Coleoptera (LÖBL & SMETANA 2010), but no further information is available.

Material and methods

Veronika Preite (Basel, Switzerland) took the beetle photographs, using a Leica MZ 12 stereomicroscope and a Leica digital camera combined with Photoshop and Combine ZM software. All beetles photographed are held by the Natural History Museum in Basel.

The new catalogue presented here is based on the cited catalogue of 1999. New data are derived from our own collecting trips in 2001, 2009 and 2010, from the collections of the Natural History Museum of Basel (Switzerland) and the Naturkundemuseum of Erfurt (Germany), and from literature.

The nomenclature follows the catalogue by LÖBL & SMETANA (2010) for genera and species, but not for families and subfamilies. Some authors consider Bruchidae as an individual family, others as subfamily Bruchinae within the Chrysomelidae. They are not included. However, the Megalopodidae are here considered a subfamily of Chrysomelidae and are therefore included. Clytrinae, Chlamisinae and Hispinae are treated as subfamilies and not as tribes.

Tab. 1. The administrative zones of the FDR Nepal.

Region (Zone)	Geographical position
Mahakali	Far west, covering the whole depth of the country from north to south
Seti	West, covering the whole depth of the country from north to south
Karnali	West, covering the northern part of the country
Bheri	West, covering the southern part of the country
Rapti	Central-west, covering the southern part of the country
Dhawalagiri	Central-west, covering the northern part of the country
Lumbini	Central-west, covering the southern part of the country
Gandaki	Central-east, covering the northern part of the country
Narayani	Central-east, covering the southern part of the country
Bagmati	Central-east, covering the northern part of the country
Janakpur	East, covering the whole depth of the country from north to south
Sagarmatha	East, covering the whole depth of the country from north to south
Koshi	East, covering the whole depth of the country from north to south
Mechi	East, covering the whole depth of the country from north to south

Results

In Nepal, leaf beetles are numerous and rich in species diversity. Several species are known as agricultural pests, but the majority of species feed on wild plants of little or no agricultural importance. Recent expeditions have disclosed more about vertical and horizontal distribution. Most of the newly-recorded species belong to the subfamily Alticinae, followed by the Galerucinae. Since the last catalogue, with 230 Alticinae species, the number has increased to 335, a rise of nearly 50%. The number of species has increased in all subfamilies (Tab. 3), while the number of Chrysomelidae species stands at 1037.

Sagrinae, Donaciinae, Zeugophorinae, Megalopodinae, Criocerinae

Only three species of the Oriental subfamily Sagrinae are known in Nepal.

The Donaciinae are surprisingly represented by only a single species of *Donacia*.

Zeugophorinae and Megalopodinae are small subfamilies, with seven and eight species in Nepal respectively.

Criocerinae are quite well represented with 42 species, mostly belonging to the Palaearctic genera *Lema* and *Lilioceris*.

Clytrinae and Cryptocephalinae

The Clytrinae, with 42 Nepalese species, live mainly in the low valleys and plains. Only three species occur above 3000 m. *Smaragdina* is a Palaearctic genus, also well known in Europe, while *Miochira* is known only from the Himalayan region. There are some endemic species known only in Nepal, e.g. *Epimela tristis* and *Aethomorpha schmidtii*.

The Cryptocephalinae are a subfamily with 70 species known in Nepal. Some species are found in the lowlands below 1000 m, but most of them occur between 1000 m and 3000 m. The genus *Cryptocephalus* is widely distributed in Palaearctic and Oriental regions. However, *Cryptocephalus subnepalensis*, *C. kopetzi* and certain other species are known only from Nepal.

Eumolpinae and Chrysomelinae

Eumolpinae are a poorly investigated subfamily, although 94 species are known in Nepal. Many more species are assumed to be present and as yet undiscovered. The group occurs largely below 3000 m. Some species of *Xanthonia* and *Trichotheca* are also found at higher altitudes. There are many Oriental species distributed through India, China, Indo-China and even Indonesia. Among the endemic species known only to Nepal are, for example, *Xanthophorus nepalicus* and *Nodina martensi*.

The Chrysomelinae are quite a small subfamily with 50 species known in Nepal. Most of them occur between 2000 and 3000

m. *Semenovia* and *Sclerophaedon* are endemic genera of higher altitudes. Other endemic species known only to Nepal are, for example, *Phaedon gressitti* and *Chrysolina hartmanni*. There are also some Palaearctic species widely distributed in Europe, e.g. *Chrysomela populi*.

Galerucinae

To date, 274 species of Galerucinae have been recorded in Nepal (27% of all Chrysomelidae there). Most of them occur at altitudes of between 1000 and 3000 m. The larger species are found mainly at altitudes below 2000 m, with the smaller ones also extending to high altitudes. Above 4000 m are only species endemic to the Himalayas. They live under stones and appear to feed on mosses. An example is

Tab. 2. Altitude levels used in the catalogue.

Altitude	Level
0–1000 m	1
1000–2000 m	2
2000–3000 m	3
3000–4000 m	4
>4000 m	5

Tab. 3. A comparison of a number of species in the particular subfamilies as listed by MEDVEDEV & SPRECHER-UEBERSAX (1999) and in the present communication (2011).

Subfamily	1999	2011
Sagrinae	2	4
Donaciinae	1	1
Zeugophorinae	6	7
Megalopodinae	7	8
Criocerinae	34	43
Clytrinae	34	42
Cryptocephalinae	51	70
Chlamisinae	8	8
Lamprosomatinae	4	4
Eumolpinae	79	94
Chrysomelinae	42	50
Galerucinae	219	274
Alticinae	230	335
Hispinae	52	62
Cassidinae	28	35
Total	797	1037

the endemic genus *Nepalogaleruca* with five species. *Nepalogaleruca* is an apterous mountainous-dwelling genus. *Nepalogaleruca angustilineata*, found on stony, sandy paths without vegetation between 2000 m and 4500 m (Fig. 3), is the most frequent species of the genus. *Nepalogaleruca elegans* is found more in the east and also at lower altitudes. All species have a daily cycle and may be found on warm and sunny days.

Alticinae

To date, 335 species of Alticinae are known in Nepal, (33% of all Chrysomelidae there). The highest number of species is found between 2000 and 4000 m. Smaller-sized species occur at high altitudes, many of them apterous.

Above 4000 m there are several species endemic to Nepal. Many of them are highly specialised in terms of specific habitats and food plants. They are found on and under stones. Their natural history is largely unknown. It is assumed that some of them feed on mosses, algae and small alpine plants. The Alticinae are a subfamily perfectly adapted to high altitudes and 13 species live at altitudes of over 4000 m, where the climate conditions are extreme and unsuitable for many other subfamilies.

One of these high mountain specialists is the genus *Ivalia*, of which eight species are known. Some live at lower altitudes, but all are found where vegetation is scarce or on and under stones.

Ivalia minima was found on the ground, in a zone with little vegetation, and on stones near rivers above 3000 m. In the dark of evening it was seen under small, creeping alpine plants and under stones, but during warm and sunny days it was observed on warm stones. It is assumed that it feeds on mosses.

Neocrepidodera schenklingi lives in the leaf litter of rhododendron forests (Fig. 2).

Hispinae and Cassidinae

Hispinae are beetles of low altitudes. They are largely Oriental in distribution, also extending to India and Indo-China. Only one species, *Dactylispa brevispinosa*, occurs above 3000 m. There are a number of endemic species known only to Nepal, among them *Prionispa laeta* and *Dactylispa pectinata*. While in central Europe there are only very few species of Hispinae, belonging to two genera, in Nepal they are represented by 62 species and 21 genera.

The Cassidinae are also beetles of the lower regions. Very few species occur at higher altitudes, only two of them above 3000 m. They are mainly Oriental with a distribution in China and Indo-China. A single endemic species, *Cassida schawalleri*, is known only from Nepal. Cassidinae are present with 10 genera and 35 species, while in central Europe there are only three genera but a similar number of species, mostly belonging to *Cassida*. In Nepal, the genus *Cassida* is represented by 16 species, nearly half of all Nepalese Cassidinae.

Distribution and endemism

The number of endemic species is high at 314, between a quarter and a third of all the species known from the country. Exclusive to Nepal are, for example, *Aphthona*

mimica, *Batophila nepalica*, *Clavicornaltica takizawai*, *Hespera flaviventris*, *Letzarella himalayana*, *Microcrepis smetanai*, *Paraminota minima*, *Trachytetra aptera*, and *Xuthea nepalensis*. About 317 species are also known from the Oriental region, mainly from Indo-China, with 113 species recorded from Bhutan, 228 from China and 564 from India; the last-cited constitute half of all the species in Nepal.

About 20 species are widely distributed in Asia and even in Europe, e.g. *Altica cyanea*, *Lema coromandeliana*, and *Longitarsus ochroleucus*. The Sagrinae are a typical Oriental subfamily mainly distributed in India and Indo-China. The Zeugophorinae are known from India, China and Indo-China. In contrast, genera such as *Lema* and *Lilioceris* also occur in Europe, but with several Oriental species. *Lema* has 22 species in Nepal, *Lilioceris* 15.

Chrysomela populi is definitely a species of temperate climate, very common and well-known throughout the Palaearctic region. There are also many tropical species among the Hispinae and Cassidinae, e.g. *Agonita maculigera*, *Estigmene chinensis*, *Craspedonta leayana*, and *Cassida circumdata*. More xerophilous species include, for example, *Aspidomorpha miliaris*, found in hot, dry regions. Species of the more humid areas belong largely to the Alticinae, e.g. all *Benedictus*, mostly found in mosses.

Species with an extended altitude range are *Lilioceris impressa*, *Miochira montana*, and *Cryptocephalus exsulans*. Species of only lower altitudes include *Basilepta laeta*, *Plagiodesma rufescens* and *Galerucella birmanica*. Among the species of only high altitudes are *Nepalogaleruca schmidti*, *Trachytetra aptera*, *Microcrepis schererri* and *Calomicrus annapurnae*. We recorded a concentration of species diversity at about 2000 m with a steady decrease towards the alpine zone.

Some genera are extremely rich in Nepal. *Cryptocephalus* is present with 55 species, *Longitarsus* with 34 species, *Monolepta* with 34 species and *Aphthona* with 31 species. Other genera such as *Donacia*, *Acolastus*, *Jacobyana*, *Phyllobrotica* and *Prionispa* are present with only a single species.

Some data on leaf-beetle habitats from the expedition in 2010

Cryptocephalus subnepalensis on rhododendron (Ericaceae), 2652 m, forest edge near river, and 2431 m.

Platycorynus undatus on wormwood (*Artemisia* sp., Asteraceae), 1015 m, near river.

Agrosteomela indica, on *Berberis* and other shrubs, 2431 m, on grassland and in forest.

Ambrostoma mahesa on shrubs near river, 2976 m.

Chrysolina vishnu on wormwood (*Artemisia* sp., Asteraceae), 1015 m, near river.

Plagiosterna adamsi on wormwood (*Artemisia* sp., Asteraceae), near river, 1015 m.

Agetocera hopei on shrub near river, 2317 m.

Aplosonyx chalybaeus, on herbs near river, 1015 m.

Arthrotidea nepalensis on *Viburnum erubescens* (Caprifoliaceae) at forest edge, 2652 m and *Neolitsea cuipala* in grassland, 2431 m, quite common on Mt. Phulchoki, 1926 m.

Lepthartra fasciata on *Pilea* sp. (Urticaceae), 1926 m, Mt. Phulchoki.

Mimastra unicitarsis on *rhododendron* (Ericaceae), fern and other shrubs,
2301 m and 2652 m.

Morphoshaera parva on various plants, 1926 m.

Paridea octomaculata on various plants, 1926 m.

Paridea fasciata on various plants, 2431 m.

Nonarthra variabilis on *Berberis aristata* (Berberidaceae) and *Pieris formosa*
(Ericaceae), 2301 m.

Dactylispa brevispinosa on *Pieris formosa* (Ericaceae), 2301 m, near river,
2317 m, on shrubs at 2652 m, on *Berberis aristata* (Berberidaceae) in
grassland and in forest, also at 1926 m on Mt. Phulchoki.

Dactylispa atkinsoni on *Berberis aristata* (Berberidaceae), 2431 m, in grassland
and in forests.

Climatic differentiation from northwest to southeast

The level of precipitation is distinctly higher in the east of Nepal while the duration of snow cover is shorter in the west. The tree-lines are also different. The mean temperatures in the southwestern lowlands are very high. We recorded a progressive impoverishment of species diversity from east to west. To date, we count about 550 species in the east and about 450 in the west and <100 species in the far west. Typical eastern species are *Temnaspis quadriplagiata*, *Cleorina takizawai*, *Monolepta simlensis* and *Loeblaltica gerhardi*. Typical western species are *Cryptocephalus kopetzi*, *Chrysolina dhaulagirica* and *Halticorus himalayensis*.

Patterns of altitudinal distribution: Vegetation zones

Colline zone (up to 1000 m). Relatively arid climate in winter, quite wet in summer. Many primary forests have disappeared in recent decades or are reduced to fragments. There are many settlements and villages, associated with grasslands where the grass may even reach three metres in height. In part, evergreen tropical forests of Dipterocarpaceae still exist. A few Indo-Malayan cloud forest species are present. Many species live in the tree canopies, a few in the sparse ground vegetation. A variety of Oriental Chrysomelidae are found on flowering shrubs. The subfamilies Criocerinae, Clytrinae and Eumolpinae as, for instance *Aspidolopha lesagei*, *Lema quadripunctata* and *Agonita maculigera*, are present.

Lower montane zone (1000–2000 m). This zone lies under the condensation level of the annual monsoon. Ferns are common on shadowy hillsides, open pine forests with *Pinus roxburghii* grow on sunny hillsides. Agricultural fields dominate (millet, rice, banana, citrus, tea). Many slopes are deforested and terraced for agriculture. Here we find several agricultural pests, among them a number of genera of Chrysomelidae such as *Basilepta*, *Lema*, *Pagria*, *Psylliodes* and *Cassida*. On various herbs, among them

wormwood, common species such as *Platycorynus undatus*, *Chrysolina vishnu*, *Lepthartra fasciata*, *Aplosonyx chalybaeus* and *Paridea octomaculata* occur.

Upper montane zone (2000–4000 m) – Lower cloud forest zone up to 2500 m. On sunny slopes there are forests of Ericaceae (*Rhododendron* spp.) reaching 5–10 m in height, as well as *Pinus* and *Quercus* together with succulent orchids as epiphytes. About 420 species of Chrysomelidae are known at this level. They can be beaten from trees, shrubs and herbs. Most of the subfamilies of Chrysomelidae are well represented. Several beetles, such as *Agrosteomela indica*, *Mimastra unicitarsis*, *Agetocera hopei* and *Nonarthra variabilis* are found on shrubs such as barberry (*Berberis*).

Upper montane zone (2000–4000 m) – Medium cloud forest zone up to 3000 m. The mid-cloud forest zone begins where permanent human habitations end. The trees are mostly evergreen, and the highest trees of the montane level occur here. In the wet, shadowy rhododendron forests many species live in the canopies of the trees while in the sparse scrub only a few species can be found. Various leaf beetles are present at the forest borders and on flowering shrubs such as rhododendron, for example *Ambrostoma mahesa*, *Cryptocephalus subnepalensis* and *Arthrotidea nepalensis*.

Upper montane zone (2000–4000 m) – Medium cloud forest zone up to 3000 m. At the same altitude, there are also woodless areas with various habitats. Such areas are often strongly grazed and therefore poor in species. On flowering shrubs and near forest edges the biodiversity is not very rich, and largely common species without special habitat requirements occur there. The first alpine species appear.

Upper montane zone (2000–4000 m) – Upper cloud forest zone up to 4000 m. The zone reaches the upper level of “knee-timber” trees and shrubs such as *Juniperus* and *Rhododendron*. It is frost-free for only three months of the year. Very wide temperature ranges occur, mainly in winter. At >3000 m the number of species decreases to a mere 160. In particular, the Galerucinae and Alticinae live on herbs, the sparse vegetation and under stones. The beating net can be put aside. This is the habitat of apterous endemic specialists such as *Nepalogaleruca angustilineata* at the margins of tracks, *Ivalia minima* on and under stones and *Asiorestia schenklingi* in leaf litter.

At a slightly higher altitude the weather becomes harsh and the nights are cold even in summer. The species number drops significantly and most Chrysomelidae are very small in size. Most species are hidden under stones, appearing only in the few sunny hours of warmer days.

Alpine zone (3800/4200–4800/5500 m). This extends to the altitude at which frost alternates with raw substrate. Dwarf shrubs, grasslands with Cyperaceae and cushion plant communities are characteristic of the alpine zone. Cold, fog, rain, snow and hail contribute to difficult collecting conditions. Only 30 species are known at altitudes above 4000 m, among them *Neocrepidodera thoracica*, *Paraminotella nepalensis* and *Sclerophaedon brendelli*.

Lema (s. str.) coromandeliana (Fabricius, 1798)

Leptura coromandeliana Fabricius, 1798; Supplementum entomologicae systematicae: 154
Lema allardi Baly, 1890; *Lema binghami* Jacoby, 1908; *Lema bretinghami* Baly, 1861; *Lema cyanipennis* Olivier, 1808; *Lema dichroa* Blanchard, 1853; *Lema gangetica* Weise, 1903; *Lema lateralis* Jacoby, 1893; *Lema melanocera* Lacordaire, 1845; *Lema obscuriventris* Pic, 1935; *Lema philippina* Weise, 1922; *Lema rufipes* Weise, 1922; *Lema semifulva* Jacoby, 1889

Karnali, Gandaki, Bagmati, Koshi 1, 2, 3
 Nepal, widely distributed in South Asia on rice

***Lema* (s. str.) *cyanæa* Fabricius, 1798**

Lema cyanæa Fabricius, 1798; Supplementum entomologicae systematicae: 92
 Dhawalagiri, Gandaki, Bagmati, Koshi 1, 2, 3, 4
 Nepal, India, China, Indonesia, Oriental region

***Lema* (s. str.) *kimotoi* L. N. Medvedev et Sprecher-Uebersax, 1999**

Lema kimotoi L. N. Medvedev et Sprecher-Uebersax, 1999; Entomologica Basiliensia 21: 356
 Koshi 2, 3
 Nepal, Oriental region

***Lema* (s. str.) *lacertosa* Lacordaire, 1845**

Lema lacertosa Lacordaire, 1845; Mémoires de la Société Royale des Sciences de Liège 3: 339
Lema diversipes Pic, 1921
 Bagmati, Koshi 1, 2
 Nepal, India, China, Oriental region

***Lema* (s. str.) *malabarica* Jacoby, 1908**

Lema malabarica Jacoby, 1908; Fauna of British India 1: 18
 (no data) (no data)
 Nepal, India, Oriental region

***Lema* (s. str.) *nepalensis* Bryant, 1952**

Lema nepalensis Bryant, 1952; The Annals and Magazine of Natural History (12) 5: 602
 Bagmati 3
 Nepal

***Lema* (s. str.) *nigrofrontalis* Clark, 1866**

Lema nigrofrontalis Clark, 1866; A Catalogue of Phytophaga: 40
 Dhawalagiri, Gandaki, Bagmati, Janakpur, Koshi 1, 2
 Nepal, India

***Lema* (s. str.) *paradoxa* Jacoby, 1904**

Lema paradoxa Jacoby, 1904; Annales de la Société Entomologique de Belgique 48: 380
 (no data) (no data)
 Nepal, Oriental region

***Lema* (s. str.) *psyche* Baly, 1865**

Lema psyche Baly, 1865; The Annals and Magazine of Natural History (3) 16: 157
 Sagarmatha (no data)
 Nepal, India

***Lema* (s. str.) *rufofrontalis* Jacoby, 1908**

Lema rufofrontalis Jacoby, 1908; Fauna of British India 2: 62
 Lumbini 1
 Nepal, India

***Lema* (s. str.) *rufotestacea* Clark, 1866**

Lema rufotestacea Clark, 1866; A Catalogue of Phytophaga 1: 29
Lema annulitarsis Pic, 1924; *Lema bohemani* Gressitt, 1942; *Lema nitobei* Chûjô, 1933; *Lema palonensis* Jacoby, 1892; *Lema saigonensis* Pic, 1923

Dhawalagiri, Bagmati, Koshi, Mechi
Nepal, India, China, Oriental region 1, 2, 3

***Lema* (s. str.) *semifulva* Jacoby, 1889**

Lema semifulva Jacoby, 1889; Annali del Museo Civico di Storia Naturale di Genova 27: 152
(no data) (no data)
Nepal, India, China, Oriental region

***Lema* (s. str.) *terminata* Lacordaire, 1845**

Lema terminata Lacordaire, 1845; Mémoires de la Société Royale des Sciences de Liège 3: 341
Koshi 1
Nepal, India

***Lilioceris atrilateralis* Kimoto et Takizawa, 1973**

Lilioceris atrilateralis Kimoto et Takizawa, 1973; Kontyû 41: 171
Dhawalagiri, Bagmati, Janakpur, Sagarmatha, Koshi 1, 2, 3
Nepal

***Lilioceris branuccii* L. N. Medvedev, 1992**

Lilioceris branuccii L. N. Medvedev, 1992; *Entomologica Basiliensis* 15: 379
Dhawalagiri 2, 3
Nepal, India

***Lilioceris cheni* Gressitt et Kimoto, 1961**

Lilioceris cheni Gressitt et Kimoto, 1961; Pacific Insects Monograph 22: 46
Mechi 1
Nepal, China, Oriental region

***Lilioceris cyanicollis* (Pic, 1916)**

Crioceris cyanicollis Pic, 1916; Mélanges Exotico-Entomologiques 19: 16
Mechi 3
Nepal, China, Oriental region

***Lilioceris egena* (Weise, 1922)**

Crioceris egena Weise, 1922; Tijdschrift voor Entomologie 65: 41
Narayani, Bagmati, Janakpur 1, 2, 3
Nepal, India, China, Oriental region

***Lilioceris flavipennis* (Baly, 1859)**

Crioceris flavipennis Baly, 1859; The Transactions of the Entomological Society of London (n. ser.) 5: 151
Koshi 3
Nepal, India

***Lilioceris impressa* (Fabricius, 1787)**

Crioceris impressa Fabricius, 1787; *Mantissa insectorum* 1: 88
Crioceris castanea Lacordaire, 1845; *Crioceris coomani* Pic, 1928; *Lilioceris inflaticornis* Gressitt et Kimoto, 1961; *Crioceris omophloides* Lacordaire, 1845; *Crioceris subcostata* Pic, 1921
 Karnali, Bheri, Dhawalagiri, Lumbini, Gandaki, Bagmati, Janakpur, Sagarmatha, Koshi 1, 2, 3, 4
 Nepal, India, China, Indonesia, Oriental region

***Lilioceris laosensis* (Pic, 1916)**

Crioceris laosensis Pic, 1916; *Mélanges Exotico-Entomologiques* 33: 2
Lilioceris bechynei L. N. Medvedev, 1958; *Crioceris thibetana* Pic, 1916
 Bheri, Dhawalagiri, Gandaki, Bagmati, Janakpur, Koshi 1, 2, 3
 Nepal, China, Oriental region

***Lilioceris locuples* (Clark, 1866)**

Crioceris locuples Clark, 1866; *A Catalogue of Phytophaga* 1: 64
 Dhawalagiri, Koshi 2, 3
 Nepal, India

***Lilioceris merdigera* (Linnaeus, 1758)**

Chrysomela merdigera Linnaeus, 1758; *Systema naturae per regna tria naturae* 1: 275
Crioceris abdominalis Comolli, 1837; *Crioceris brunnea* Fabricius, 1792; *Crioceris collaris* Lacordaire, 1845;
Crioceris convallariae Harrer, 1971; *Lilioceris foro Juliensis* G. Müller, 1948; *Crioceris mediciana* Lacordaire, 1845; *Lilioceris nigritarsis* Doi, 1928; *Crioceris rufipes* Herbst, 1783; *Crioceris similis* Brahm, 1790; *Crioceris suffriani* F. J. Schmidt, 1842
 Janakpur 1, 2
 Nepal, China

***Lilioceris nepalensis* Takizawa, 1989**

Lilioceris nepalensis Takizawa, 1989; *Japanese Journal of Entomology* 57 (2): 320
 Dhawalagiri, Bagmati 3
 Nepal, India

***Lilioceris neptis* (Weise, 1922)**

Crioceris neptis Weise, 1922; *Tijdschrift voor Entomologie* 65: 41
Lilioceris cantonensis Heinze, 1943; *Lilioceris melli* Heinze, 1943
 Bagmati (no data)
 Nepal, China, Oriental region

***Lilioceris nigropectoralis* (Pic, 1928)**

Crioceris nigropectoralis Pic, 1928; *Bulletin Bi-Mensuel de la Société Linnéenne de Lyon* 7: 88
 Bagmati 2
 Nepal, China

***Lilioceris semifoveolata* (Jacoby, 1908)**

Crioceris semifoveolata Jacoby, 1908; *Fauna of British India*: 76
 Dhawalagiri 2
 Nepal, India

***Lilioceris semipunctata* (Fabricius, 1801)**

Crioceris semipunctata Fabricius, 1801; *Systema Eleutherorum* 1: 472

Narayani, Bagmati, Janakpur, Koshi

1, 2

Nepal, India, China, Indonesia, Oriental region

***Lilioceris unicolor* (Hope, 1831)**

Crioceris subcostata Pic, 1921; *Gray, Zoological Miscellany* 1: 22

(no data)

(no data)

Nepal, Oriental region

***Oulema downesi* (Baly, 1865)**

Lema downesi Baly, 1865; *The Annals and Magazine of Natural History* (3) 16: 156

Lema melania Chūjō, 1951

Bagmati

2

Nepal, India

CLYTRINAE

***Aetheanta higuchii* (Kimoto et Takizawa, 1981)**

Smaragdina higuchii Kimoto et Takizawa, 1981; *Entomological Revue of Japan* 35 (1–2): 5

Aetheanta fasciata Medvedev, 1988

Karnali, Gandaki, Bagmati, Janakpur

2, 3, 4

Nepal, India

***Aetheodactyla dimitiatipennis* (Baly, 1880)**

Coptocephala dimitiatipennis Baly, 1880; *Cistula Entomologica* 2: 371

Janakpur, Koshi

1

Nepal, India

***Aetheomorpha apicata* L. N. Medvedev, 1988**

Aetheomorpha apicata L. N. Medvedev, 1988; *Entomologica Basiliensis* 12: 474

Smaragdina nigroapicalis Lopatin, 2005

Gandaki, Narayani, Janakpur

1, 2

Nepal, India

***Aetheomorpha cochinchinensis* (Lefèvre, 1889)**

Gynandrophthalma cochinchinensis Lefèvre, 1889; *Annales de la Société Entomologique de France* 9: 290

(no data)

(no data)

Nepal, Oriental region

***Aetheomorpha coerulea* (Jacoby, 1892)**

Aspidolopha coerulea Jacoby, 1892; *Annali del Museo Civico di Storia Naturale di Genova* 32: 882

Gandaki, Bagmati, Koshi

2

Nepal, Oriental region

***Aetheomorpha fuscicornis* (Lacordaire, 1848)**

Damia fuscicornis Lacordaire, 1848; *Mémoires de la Société Royale des Sciences de Liège* 5: 386

Narayani, Bagmati, Koshi

1, 2, 3

Nepal, India

***Aetheomorpha malayana* (Baly, 1865)**

Gynandrophthalma malayana Baly, 1865; The Transactions of the Entomological Society of London ser. 3, 4 (1): 51
Cyaniris cochinchinensis Lefèvre, 1889; *Gynandrophthalma birmanica* Jacoby, 1892
 Dhawalagiri, Bagmati 1, 2
 Nepal, India, Oriental region

***Aetheomorpha nitidicollis* (Jacoby, 1908)**

Aspidolopha nitidicollis Jacoby, 1908; Fauna of British India: 143
 Gandaki 2
 Nepal, India

***Aetheomorpha pictipennis* (Jacoby, 1892)**

Gynandrophthalma pictipennis Jacoby, 1892; Annali del Museo Civico di Storia Naturale di Genova 32: 883
 Gandaki 2
 Nepal, Oriental region

***Aetheomorpha schmidti* L. N. Medvedev, 2003**

Aetheomorpha schmidti L. N. Medvedev, 2003; Biodiversität und Naturausstattung im Himalaya 1, Erfurt: 318
 Gandaki 2
 Nepal

***Aetheomorpha substriata* L. N. Medvedev, 2003**

Aetheomorpha substriata L. N. Medvedev, 2003; Biodiversität und Naturausstattung im Himalaya 1, Erfurt: 317
 Bagmati 1, 2
 Nepal, India

***Aetheomorpha suturata* Jacoby, 1898**

Aetheomorpha suturata Jacoby, 1898; Annales de la Société Entomologique de Belgique 42: 185
Clytra morimotoi Kimoto et Gressitt, 1981; *Aetheomorpha multiplagiata* Jacoby, 1903
 Gandaki, Bagmati 1, 2
 Nepal, India, Oriental region

***Aetheomorpha virgula* Jacoby, 1908**

Aetheomorpha virgula Jacoby, 1908; Fauna of British India 1: 128
 Dhawalagiri, Narayani, Bagmati, Janakpur, Koshi, Mechi 1, 2, 3
 Nepal, India

***Aspidolopha buqueti egregia* (Bohemian, 1859)**

Clythra buqueti egregia Boheman, 1858; Coleoptera. Species novas descriptis: 154
Aspidolopha siamensis Pic, 1941; *Aspidolopha trinotata* Pic, 1928
 Koshi 2
 Nepal, India, China, Oriental region

***Aspidolopha melanophthalma* (Lacordaire, 1848)**

Clythra melanophthalma Lacordaire, 1848; Mémoires de la Société Royale des Sciences de Liège 5: 254
Diapromorpha minuta Pic, 1933
 Koshi 1
 Nepal, India, China, Indonesia, Oriental region

***Aspidolopha pseudospilota* L. N. Medvedev, 1988**

Aspidolopha pseudospilota L. N. Medvedev, 1988; Fauna i ekologiya nasekomykh Vietnam'a: 47
Bagmati, Koshi
Nepal, India

***Monolepta leechi* Jacoby, 1890**

Monolepta leechi Jacoby, 1890; The Entomologist 23: 216
 Bagmati, Janakpur 2, 3
 Nepal, India, China, Oriental region

***Monolepta lesagei* Takizawa, 1988**

Monolepta lesagei Takizawa, 1988; Kontyû 56: 548

Bagmati, Koshi, Mechi
Nepal 1, 2, 3

***Monolepta madrasensis* Wilcox, 1973**

Monolepta madrasensis Wilcox, 1973; Coleopterorum Catalogus Supplementa 78 (3): 562
Monolepta duvivieri Jacoby, 1904; *Monolepta lineata* Weise, 1915
(no data) (no data)
Nepal

***Monolepta martensi* L. N. Medvedev, 1992**

Monolepta martensi L. N. Medvedev, 1992; Stuttgarter Beiträge zur Naturkunde A (485): 16
Koshi, Mechi 1, 2, 3
Nepal

***Monolepta nepalensis* Kimoto, 1970**

Monolepta nepalensis Kimoto, 1970; Khumbu Himal 3 (3): 420
Bagmati 1
Nepal

***Monolepta nigrobasalis* L. N. Medvedev 1999**

Monolepta nigrobasalis L. N. Medvedev 1999; Veröffentlichungen des Naturkundemuseums Erfurt 32: 149
Bagmati 2
Nepal

***Monolepta nigripennis* (Motschulsky, 1866)**

Teinodactyla nigripennis Motschulsky, 1866; Bulletin de la Société Impériale des Naturalistes de Moscou 39:
418
Karnali, Dhawalagiri, Bagmati, Mechi 2, 3
Nepal, India

***Monolepta orientalis* Jacoby, 1889**

Monolepta orientalis Jacoby, 1889; Annali del Museo Civico di Storia Naturale di Genova 27: 227
Monolepta konbirensis Duvivier, 1891
Gandaki, Narayani, Bagmati, Janakpur, Koshi 1, 2, 3
Nepal, India, Oriental region

***Monolepta pallidula* (Baly, 1874)**

Luperodes pallidula Baly, 1874; The Transactions of the Entomological Society of London: 187
Monolepta gracilipes Chûjô, 1938
(no data) (no data)
Nepal, India, China, Siberia, Japan

***Monolepta quadricavata* S. H. Chen, 1976**

Monolepta quadricavata S. H. Chen, 1976; Acta Entomologica Sinica 19 (2): 205
Bagmati 2
Nepal, China

***Monolepta rufa* Takizawa, 1988**

Monolepta rufa Takizawa, 1988; Kontyû 56 (3): 549

Dhawalagiri, Bagmati 2, 3
Nepal, India

***Monolepta satoi* Kimoto et Takizawa, 1983**

Monolepta satoi Kimoto et Takizawa, 1983; Bulletin of the Natural Science Museum Tokyo A 9 (2): 89
Dhawalagiri, Bagmati, Janakpur 2
Nepal, India

***Monolepta schawalleri* L. N. Medvedev, 1990**

Monolepta schawalleri L. N. Medvedev, 1990; Stuttgarter Beiträge zur Naturkunde A (453): 21
Bagmati, Koshi, Mechi 1, 2
Nepal

***Monolepta semiluperina* Kimoto, 1989**

Monolepta semiluperina Kimoto, 1989; Esakia 27: 148
Gandaki 2, 3
Nepal, Oriental region

***Monolepta severini* (Jacoby, 1896)**

Luperus severini Jacoby, 1896; Annales de la Société Entomologique de Belgique 40: 276
(no data) (no data)
Nepal, Oriental region

***Monolepta sexlineata* Chûjô, 1938**

Monolepta sexlineata Chûjô, 1938; Arbeiten über Morphologische und Taxonomische Entomologie 5 (2): 150
Monolepta mandrasensis Wilcox, 1973; *Monolepta duvivieri* Jacoby, 1904; *Monolepta lineata* Weise, 1915
Bagmati, Mechi 1, 2
Nepal, Bhutan, India, China, Oriental region

***Monolepta signata* (Olivier, 1808)**

Galeruca signata Olivier, 1808; Entomologie ou histoire naturelle des insectes 6: 665
Crioceris neglecta C. R. Sahlberg, 1829; *Luperodes quadripustulata* Motschulsky, 1858
Karnali, Dhawalagiri, Lumbini, Gandaki, Narayani, Bagmati, Janakpur, Koshi, Mechi
1, 2, 3
Nepal, Bhutan, India, China, Indonesia, Oriental region

***Monolepta simlensis* Kimoto, 1967**

Monolepta simlense Kimoto, 1967; Esakia 6: 73
Koshi, Mechi 2
Nepal, India

***Monolepta surkheta* L. N. Medvedev, 2000**

Monolepta surkheta L. N. Medvedev, 2000; Stuttgarter Beiträge zur Naturkunde A 606: 13
Bheri 1, 2
Nepal

***Monolepta tatemizo* Kimoto, 2004**

Monolepta tatemizo Kimoto, 2004; Bulletin of the Kitakyushu Museum of Natural History and Human History
A, 4: 58

Janakpur, Koshi
Nepal, Bhutan

2

***Monolepta trifasciata* Jacoby, 1896**

Monolepta trifasciata Jacoby, 1896; Annales de la Société Entomologique de Belgique 40: 295
(no data) (no data)
Nepal, Oriental region

***Monolepta tuberculipygus* L. N. Medvedev, 2007**

Monolepta tuberculipygus L. N. Medvedev, 2007; *Entomologica Basiliensis et Collectionis Frey* 29: 297
Bagmati 2
Nepal

***Monolepta undulatovittata* (Motschulsky, 1866)**

Teinodactila undulatovittata Motschulsky, 1866; Bulletin de la Société Impériale des Naturalistes de Moscou 39 (2): 417
(no data) (no data)
Nepal, Oriental region

***Morphosphaera brunnea* Maulik, 1936**

Morphosphaera brunnea Maulik, 1936; Fauna of British India: 321
Janakpur (no data)
Nepal, Oriental region

***Morphosphaera japonica* (Hornstedt, 1788)**

Chrysomela japonica Hornstedt, 1788; Schriften der Gesellschaft Naturforschender Freunden zu Berlin 2: 1
Bagmati, Koshi 1, 2
Nepal, China, Japan

***Morphosphaera margaritacea* Laboissière, 1930**

Morphosphaera margaritacea Laboissière, 1930; Annales de la Société Entomologique de France 99: 365
(no data) 2
Nepal, Bhutan, India, Oriental region

***Morphosphaera prava* Maulik, 1936**

Morphosphaera prava Maulik, 1936; Fauna of British India.: 320
Bagmati 2, 3
Nepal, India, Oriental region

***Nepalogaleruca angustilineata* Kimoto et Takizawa, 1972**

Nepalogaleruca elegans angustilineata Kimoto et Takizawa, 1972; Kontyû 40: 216
Karnali, Dhawalagiri, Lumbini, Gandaki, Bagmati, Janakpur 3, 4, 5
Nepal

***Nepalogaleruca elegans* Kimoto, 1970**

Nepalogaleruca elegans Kimoto, 1970; Khumbu Himal 3 (3): 413
Bagmati, Janakpur, Sagarmatha, Koshi 1, 2, 3, 4
Nepal

***Nepalogaleruca hartmanni* L. N. Medvedev, 2003**

Nepalogaleruca hartmanni L. N. Medvedev, 2003; Biodiversität und Naturausstattung im Himalaya 1, Erfurt:
320
Janakpur 3
Nepal

***Nepalogaleruca laeta* L. N. Medvedev, 1990**

Nepalogaleruca laeta L. N. Medvedev, 1990; Stuttgarter Beiträge zur Naturkunde A (453): 15
Bagmati, Janakpur 3, 4
Nepal

***Nepalogaleruca schmidti* L. N. Medvedev et Sprecher-Uebersax, 1997**

Nepalogaleruca schmidti L. N. Medvedev et Sprecher-Uebersax, 1997; Coleoptera 1: 232
Gandaki 5
Nepal

***Nepalolepta carinata* L. N. Medvedev, 1992**

Nepalolepta carinata L. N. Medvedev, 1992; Stuttgarter Beiträge zur Naturkunde A (485): 17
Koshi 3
Nepal

***Oides flava* (Olivier, 1807)**

Adorium flavum Olivier, 1807; Entomologie ou histoire naturelle des insectes 5: 611
Lumbini, Narayani 1
Nepal, India, China, Indonesia, Oriental region

***Oides livida* (Fabricius, 1801)**

Adorium lividum Fabricius, 1801; Systema Eleutheratorum 1: 410
Rhombopalpa pectoralis Clark, 1865; *Oides nigripes* Jacoby, 1891; *Oides pallidicornis* Jacoby, 1899; *Oides pectoralis* Maulik, 1936; *Oides livida* Vachon, 1980
Lumbini, Gandaki 1
Nepal, Bhutan, India, China, Indonesia, Oriental region

***Oides maculata* (Olivier, 1807)**

Adorium maculatum Olivier, 1807; Entomologie ou histoire naturelle des insectes 5: 611
Adorium laticlavum Fairmaire, 1889
Bagmati 2, 3
Nepal, India, China, Indonesia, Oriental region

***Oides scutellata* (Hope, 1831)**

Adorium scutellatum Hope, 1831; Gray, Zoological Miscellany 1: 28
Dhawalagiri, Lumbini 3
Nepal, India, Pakistan, Oriental region

***Paleosepharia pokharensis* (Kimoto, 1982)**

Monolepta pokharensis Kimoto, 1982; Entomological Revue of Japan 37 (1): 17
Paleosepharia costata Takizawa et Basu, 1987
Gandaki 1
Nepal

***Paleosepharia tomokunii* Kimoto et Takizawa, 1983**

Paleosepharia tomokunii Kimoto et Takizawa, 1983; Bulletin of the Natural Science Museum Tokyo A 9 (2): 89

Bagmati, Janakpur, Sagarmatha
Nepal 2, 3

***Palpoxena konbirensis* (Weise, 1924)**

Platyxantha konbirensis Weise, 1924; Coleopterorum Catalogus 78: 157

Platyxantha indica Duvivier, 1892

Narayani, Bagmati, Koshi
Nepal, India, China 1, 2

***Palpoxena nasuta* (Westwood, 1837)**

Luperus nasutus Westwood, 1837; Magasin de Zoologie 7 (9): 177

Bagmati 2
Nepal, India

***Palpoxena rufifulva* (Jacoby, 1896)**

Aenidea rufifulva Jacoby, 1896; Annales de la Société Entomologique de Belgique 40: 287

(no data) (no data)
Nepal, India, China

***Palpoxena viridis* (Hope, 1831)**

Auchenia viridis Hope, 1831; Gray, Zoological Miscellany 1: 29

Bagmati, Koshi 2, 3
Nepal, India, Oriental region

***Paraplates indica* Takizawa et Basu, 1987**

Paraplates indica Takizawa et Basu, 1987; Kontyû 55 (2): 279

Bagmati 1, 2, 3
Nepal, India

***Paraplates nepalensis* L. N. Medvedev et Sprecher-Uebersax, 1998**

Paraplates nepalensis L. N. Medvedev et Sprecher-Uebersax, 1998; Spixiana 21 (10): 10

Bagmati 2
Nepal

***Parexosoma cuprescens* Chûjô, 1966**

Parexosoma cuprescens Chûjô, 1966; Memories of the Faculty of Education Kagawa University (2) 145: 23

Karnali, Gandaki, Bagmati, Sagarmatha, Mechi 2, 3, 4
Nepal, Bhutan

***Parexosoma flaviventre* (Baly, 1878)**

Malacosoma flaviventre Baly, 1878; Cistula Entomologica 2: 379

Malacosoma balyi Duvivier, 1884

Dhawalagiri, Lumbini, Bagmati 2, 3
Nepal, Bhutan, India, China, Oriental region

***Paridea (s. str.) fasciata* Laboissière, 1932**

Paridea fasciata Laboissière, 1932; Bulletin du Muséum National d'Histoire Naturelle Paris (2) 4: 970
 Dhawalagiri, Gandaki, Narayani, Bagmati, Koshi, Mechi, Daman 2, 3
 Nepal, India

***Paridea (s. str.) hirtipes* S. H. Chen, 1981**

Paridea hirtipes S. H. Chen, 1981; Insects of Xizang 1: 470
 Karnali, Dhawalagiri 2, 3
 Nepal, India, China

***Paridea (s. str.) livida* Duvivier, 1892**

Paridea livida Duvivier, 1892; Annales de la Société Entomologique de Belgique 36: 432
 Bagmati, Koshi 2
 Nepal, Bhutan, India

***Paridea (s. str.) mimica* L. N. Medvedev et Samoderzhenkov, 1997**

Paridea mimica L. N. Medvedev et Samoderzhenkov, 1997; Russian Entomological Journal 6 (1–4): 64
 Dhawalagiri, Bagmati, Mechi 2
 Nepal

***Paridea (s. str.) nepalica* L. N. Medvedev et Samoderzhenkov, 1998**

Paridea nepalica L. N. Medvedev et Samoderzhenkov, 1998; Russian Entomological Journal 6 (1–4): 63
 Dhawalagiri, Gandaki, Bagmati, Janakpur, Koshi, Mechi 1, 2, 3
 Nepal

***Paridea (s. str.) octomaculata* (Baly, 1886)**

Aulacophora octomaculata Baly, 1886; The Journal of the Linnean Society of London 20: 17
Paridea bimaculata Laboissière, 1932; *Paridea patkaiensis* Maulik, 1836
 Dhawalagiri, Lumbini, Dhawalagiri, Gandaki, Bagmati, Janakpur,
 Koshi, Mechi 1, 2, 3
 Nepal, Bhutan, India, China

***Paridea (s. str.) pallida* Bryant, 1954**

Paridea pallida Bryant, 1954; Arkiv för Zoologi (2) 6 (18): 419
 Gandaki 2
 Nepal, Bhutan, India, China

***Paridea (s. str.) perplexa* (Baly, 1879)**

Aulacophora perplexa Baly, 1879; Cistula Entomologica 2: 447
Paridea harmandi Laboissière, 1930
 Dhawalagiri 2
 Nepal, India, China, Oriental region

***Paridea (s. str.) quadrimaculata* Kimoto, 2004**

Paridea quadrimaculata Kimoto, 2004; Bulletin of the Kitakyushu Museum of Natural History and Human
 History A, 4: 58
 Bagmati 3
 Nepal

Paridea (s. str.) ruficollis Jacoby, 1892

Paridea ruficollis Jacoby, 1892; Annali del Museo Civico di Storia Naturale di Genova 32: 953
(no data) (no data)
Nepal, Bhutan, India

Paridea (s. str.) tetraspilota (Hope, 1831)

Galleruca tetraspilota Hope, 1831; Gray, Zoological Miscellany 1: 29
Paridea balyi Jacoby, 1898; *Paridea thoracica* Baly, 1886
Dhawalagiri, Gandaki, Bagmati, Koshi, Mechi 2
Nepal, India, China, Oriental region

Paridea (Semacia) lateralis L. N. Medvedev et Samoderzhenkov, 1989

Paridea lateralis L. N. Medvedev et Samoderzhenkov, 1989; Entomofauna 10 (29): 460
Paridea biconvexa Yang, 1991
Dhawalagiri 2, 3
Nepal, Oriental region

Periclitena vigorsi (Hope, 1831)

Galeruca vigorsi Hope, 1831; Gray, Zoological Miscellany 1: 29
Galleruca coerulans Hope, 1831; *Galleruca fulgida* Laboissière, 1927; *Clitena igneipennis* Baly, 1865;
Clitena melancholica Baly, 1864; *Galleruca viridissima* Weise, 1922
Karnali, Gandaki, Narayani, Bagmati, Koshi, Mechi 1, 2, 3
Nepal, India, China, Oriental region

Phyllobrotica komiyai Takizawa, 1985

Phyllobrotica komiyai Takizawa, 1985; Entomological Revue of Japan 40 (2): 107
Janakpur 2
Nepal, India

Proegmena nepalensis Chûjô, 1966

Proegmena nepalensis Chûjô, 1966; Memories of the Faculty of Education Kagawa University (2) 145: 24

Discussion

The study of Himalayan Chrysomelidae is of special interest, as this region has an especially rich biodiversity and endemism. Although Nepal has lost some of the richness of its biodiversity due to overpopulation, intensive logging, agricultural activity and fire-clearing, the fascination and the beauty of the landscape remain (Figs 4–6). The various levels of altitude and climate change within short distances are unique and are beneficial to a rich entomofauna. The high mountains and small valleys encourage speciation and endemism. However, I am afraid that collecting will become increasingly difficult in the near future. Many biotopes will disappear and collecting permission will become increasingly difficult. However, several museums hold material from expeditions to Nepal that remain to be studied, although with the reservation that while the taxonomy of the chrysomelid fauna will benefit, knowledge of the biology, larvae and food plants will remain poor.

Acknowledgements

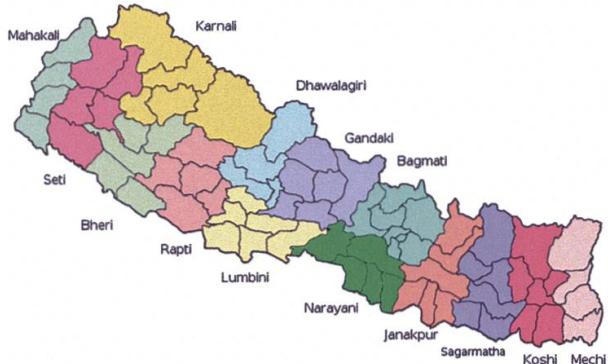

I am extremely grateful to Veronika Preite (Basel, Switzerland), who took all the photographs of beetles. I would also like to extend my thanks a number of colleagues and chrysomelidologists for their input in discussions, help and kindness, especially to Matthias Hartmann from the Naturkundemuseum in Erfurt (Germany), who gave me the opportunity to study a large body of material, and to Prof. Lev Medvedev (Moscow, Russia) for help and suggestions.
