ACKNOWLEDGEMENTS. The main part of this paper was written during my stay at the Department of Mathematics, University of Toronto, where I obtained some helpful advice. I received the hint to Newton's theorem from R. McCann and the one to Hilbert's theorem (indirectly) from consulting J. Friedlander. Some further useful hints came from A. Sikora. S. Garoufalidis clarified to me the deformation theory argument and provided reference [12], and the referee pointed out several other useful amendments. I owe a special thanks to Prof. Murasugi for his guidance, in particular for introducing to me the "trapezoidal conjecture".
