Try this experiment! How the eardrum works

WHAT YOU NEED:

- A large bowl or pot
- Plastic wrap
- 20-30 grains of uncooked rice
- A cookie sheet

WHAT TO DO:

1. To make a model of the eardrum, stretch a piece of plastic wrap over your bowl or pot. Make sure the wrap is on there tight. The plastic wrap represents the eardrum.
2. Place about 20-30 grains of uncooked rice on the top of the plastic wrap.
3. Now you need some noise. Hold the cookie sheet close to the plastic wrap. Hit the cookie sheet to create a "big bang" noise and watch the rice grains jump. Now you know how sound causes your eardrum to vibrate, sending messages to your brain about the sounds you're hearing!

Jokes

Q: When is a car not a car?

A: When it turns into a garage.

Q: Why did the scientist install a knocker on his door?

A: He wanted to win the No-bell prize.

Q: Why did the atoms cross the road?

A: It was time to split!

Q: What do you do when your chair breaks?

A: Call a Chairman.

Q: Why do eskimos wash their clothes in tide?

A: Because it's too cold out tide!

Q: Why did the boy blush when he opened the fridge?

A: He saw the salad dressing!

Mixed-up words: Zoo Animals

Unscramble the letters to match words that are shown in the box at the bottom of the page.
