Riassunto

La attuale situazione della ricerca nel campo veterinario in Isvizzera è qui esaminata. Fra l'altro l'Autore indica che gli attuali eccessi nella produzione animale mette in pericolo l'autarchia del Paese.

I traguardi della ricerca in agricoltura e veterinaria potrebbero esser in opposizione. Le esigenze ecologiche della nostra società ed i desideri della nostra agricoltura non predispongono a valutabili conflitti. Un traguardo sembra tuttavia esser comune: sul terreno attualmente ancora disponibile deve in ogni tempo esser garantito il rifornimento alimentare per la popolazione.

Le condizioni quadro per la produzione agricola si sviluppano dapprima in funzione dei bisogni sanitari del consumatore, ma poi anche delle necessità di produrre in modo da proteggere l'ambiente, del mantenimento dell'aspetto agricolo e della vita agricola. Questi bisogni della società si escludono parzialmente vicendevolmente.

Per quanto concerne la ricerca, si giunge alla conclusione che anche per il futuro essa debba esser statale. I traguardi per la produzione animale devono esser studiati, poichè spesso i limiti fra sfruttamento e abuso nell'allevamento, ma specialmente nella tenuta, vengono superati. I sistemi moderni nella produzione animale sono pure causa di vari problemi nella produzione di residui, che oggi vengono esagerati spesso in modo inadeguato.

Summary

The author considers the present-day situation in veterinary medical research in Switzerland. Among other things he postulates that the present excesses in animal production are endangering the economic self-sufficiency of the country.

The aims of agricultural and veterinary medical research tend to clash with each other, and between the ecological demands of our society and the economic interests of our agriculture there are conflicting objectives which cannot be overlooked. One aim should however be universal: on the land still available today it must at all times be possible to supply full provisions for the population.

In the framework of conditions for agricultural production the development is to some extent dependent on the consumer's health requirements, but it also demands a method of production that will not harm the environment, that will assist the conservation of the landscape and the maintenance of a stable farming community. These demands by society are partly contradictory.

As regards research, the conclusion is that it will have to remain financed by the government in the future. The aims set for animal production will have to be re-considered, because to some extent the boundaries between use and misuse have already been over-stepped, partly in the field of breeding, but even more in animal husbandry. The modern production systems are also the cause of certain problems of residues, although nowadays these are often unnecessarily exaggerated.

RICHTIGSTELLUNG

In der Arbeit von L. Bruckner, M. Ackermann, H. K. Müller und U. Kihm: Serologische Untersuchungen zur Tollwutimpfung der Hunde in der Schweiz, in der Aprilnummer (Schweiz. Arch. Tierheilk. 128, 195–200, 1986) sind leider in den Legenden zu den Abbildungen 1 und 2 (Seite 197) die Signaturen vertauscht abgedruckt worden. Nach «Prozentuale Verteilung der Hunde mit» soll das leere, nach «und ohne» das punktierte Rechteck folgen.
