### **Nutzungsbedingungen**

Die ETH-Bibliothek ist die Anbieterin der digitalisierten Zeitschriften auf E-Periodica. Sie besitzt keine Urheberrechte an den Zeitschriften und ist nicht verantwortlich für deren Inhalte. Die Rechte liegen in der Regel bei den Herausgebern beziehungsweise den externen Rechteinhabern. Das Veröffentlichen von Bildern in Print- und Online-Publikationen sowie auf Social Media-Kanälen oder Webseiten ist nur mit vorheriger Genehmigung der Rechteinhaber erlaubt. [Mehr erfahren](#)

### **Conditions d'utilisation**

L'ETH Library est le fournisseur des revues numérisées. Elle ne détient aucun droit d'auteur sur les revues et n'est pas responsable de leur contenu. En règle générale, les droits sont détenus par les éditeurs ou les détenteurs de droits externes. La reproduction d'images dans des publications imprimées ou en ligne ainsi que sur des canaux de médias sociaux ou des sites web n'est autorisée qu'avec l'accord préalable des détenteurs des droits. [En savoir plus](#)

### **Terms of use**

The ETH Library is the provider of the digitised journals. It does not own any copyrights to the journals and is not responsible for their content. The rights usually lie with the publishers or the external rights holders. Publishing images in print and online publications, as well as on social media channels or websites, is only permitted with the prior consent of the rights holders. [Find out more](#)

## zum Titelbild

### Vorgefertigtes Wasserreservoir

Innerhalb von weniger als 3  
Stunden wurde in Densbüren  
AG ein Wasserreservoir mit 38  
m³ Nettoinhalt montiert. Das  
Reservoir wurde im Werk einschliesslich aller Armaturen  
und einer Betontrennwand zwischen Nass- und Trockenkammer  
vorfabriziert und in drei  
Elementen auf die Baustelle geliefert.

Es dient der Erschliessung der  
neuen landwirtschaftlichen  
Siedlung «Asperzelg». Der aus 3  
fünf Meter langen «Eternit»-  
Rohren mit einem Durchmesser  
von 2 Metern vorgefertigte Behälter  
erwies sich im Vergleich  
zu Ortsbeton als kostengünstiger.

ger. Für Sonderbauwerke jeder  
Art berät Sie unser technischer  
Dienst jederzeit.

Eternit AG

## Handbuch für Tapeten und andere Wandbekleidungen

Ein unentbehrliches Werk für den Profi und solche die es werden  
wollen:

**Architekten, Innenarchitekten - Maler und Tape-  
zierer - Innendekorateur - Architekturstudenten -  
Lehrling**

Im handlichen Ordner sind alle zur Zeit auf dem Markt befindlichen  
Wandbekleidungen übersichtlich zusammengefasst. Jedem Ma-  
terialmuster liegt ein Datenblatt gegenüber mit Materialbeschrieb,  
Lieferform, Anwendungsmöglichkeiten. Natürlich fehlen auch  
Hinweise über Verarbeitung und Preise nicht.  
Sichern Sie sich Ihr Exemplar aus der Erstauflage. Es wird Ihnen  
sofort mit Einzahlungsschein zum Einstandspreis von Fr. 24.- je  
Stück inkl. Porto und Verpackung zugestellt.

**Verband Schweizerischer  
Handelsfirmen für Tapeten  
und Wandbekleidungen**

bitte einsenden an: Sekretariat VST  
Postfach 68, 3000 Bern 6

### Bestellschein

Ja, Ihr «Handbuch für Tapeten und andere Wandbekleidungen» interes-  
siert mich. Senden Sie mir bitte \_\_\_\_\_ Stück zum Einstandspreis von Fr. 24.-  
je Stück, inkl. Porto und Verpackung. Ich bezahle mit Einzahlungsschein  
nach Erhalt.

# Technik, die hält,

## was sie verbindet

### PARABOLT®-Klebeanker EMPA- geprüft

Bewährte Schwerbefestigung

Geringe Abstände, da druck- und spannungsfrei

Ideal für Einsatz in Beton und Leichtbaustoffen

Besonders geeignet für dynamische Belastun-  
gen wie bei Kranbahnen, Hochregallagern,  
Maschinen, Sockeln, Lärmschutzwänden etc.

#### Material

Patrone: Glaspatrone mit Kunstharz und  
Härter in separatem Röhrchen.

Gewindestangen: Stahl verzinkt, Stahl 18/10  
und rostfreier Stahl säurebeständig A4

Ø-Bereich: 8-30 mm

### Nehmen Sie doch einfach mit uns Verbindung auf

# KOENIG Verbindungstechnik

#### PASSAVANT – Dachwasserablauf

Guss, zweiteilig, senkrechter Abgang, mit Isolierkörper und Isoliererring. Rost rund oder quadratisch, begeh- oder befahrbar bis 150kN Prüfkraft.

##### Varianten:

Einteilig oder mit seitlichem Abgang.

#### PASSAVANT – Dachwasserablauf

Guss, einteilig, senkrechter Abgang, mit Isolierkörper und Kugelrost. Wählbare Distanzringe von 25, 35 und 45 mm Höhe.

##### Varianten:

Zweiteilig, mit seitlichem Abgang, oder mit Flachrost, rund und quadratisch. Heizbarer Distanzring in 45 mm Höhe.

#### PASSAVANT – Dachwasserablauf

Guss, zweiteilig, seitlicher Abgang, mit Isolierring und Isolierkörper sowie Kugelrost. Wählbare Distanzringe von 25, 35 und 45 mm Höhe.

##### Varianten:

Einteilig, mit senkrechtem Abgang, Flachrost, rund oder quadratisch. Heizbarer Distanzring in 45 mm Höhe.

## PASSAVANT

#### Flachdachwasserabläufe

aus Guss – die sichere, problemlose Flachdachentwässerung.

Das bewährte Baukastensystem aller PASSAVANT-Flachdachabläufe erlaubt das Überbrücken jeder Höhe, ohne den untersten einbetonierten Ablaufkörper zu verändern.

Der sicherste Anschluss einer Abdichtung an den Dachwasserablauf ist der Klebeflansch in Verbindung mit dem verschraubbaren Flanschring (Kleben + Verspannen).

Vom VSA empfohlen

## Damit keine Rechnung ohne den Wirt gemacht wird...

Ob in Waschküchen,  
Saunas oder Solarien:  
mit einem AEG Münz-  
schaltautomat bleibt  
keine Stromrechnung  
unbezahlt. Rund um  
die Uhr, Minute für  
Minute, zieht er die fäl-  
ligen Kosten ein. Wählen  
Sie zwischen zwölf  
Laufzeiten von 8 bis

80 Minuten und der  
Einstellung für Münzen  
oder Wertmarken.

Damit jede Rechnung aufgeht:  
AEG Münzschaltautomat

## gute Gründe für CK-BLOC Stahlbeton-Plattendecken:

Die 7 wesentlichen Vorteile:

- 1 Keine Schalen
- 2 Keine Montageunterstützung
- 3 Kein Verputzen
- 4 Kein Bewehren
- 5 Grosse Kalkulationssicherheit
- 6 Schneller Baufortschritt
- 7 Nicht teurer als mit Holzschalung

Unterstützungsfreie Stahlbeton-Plattendecke Wohn-, Hoch-, Industrie- und Brückenbau

# DULUX® S VON OSRAM.

Um Strom zu sparen, muß man heute nicht mehr mit Licht geizen.

Denn die DULUX® S braucht nur noch ca. 20% der Energie, die eine vergleichbare Glühlampe benötigt.

Würde man beispielsweise 25 kleine Zweckleuchten, die rund um die Uhr brennen, auf DULUX® S umrüsten, so könnte man im Jahr je nach Lampenleistung bis

DULUX® S 5 W		5 W = 250 Lumen = 25 W	
DULUX® S 7 W		7 W = 400 Lumen = 40 W	
DULUX® S 9 W		9 W = 600 Lumen = 60 W	
DULUX® S 11 W		11 W = 900 Lumen = 75 W	

zu Fr. 1800,- an Stromkosten sparen.

Bei gleicher Lichtqualität, bei gleicher Lichtfarbe.

Jedoch bei 80% weniger Wärmeentwicklung. So kann man zusätzlich Klimatisierungskosten einsparen.

Die DULUX® S ist einseitig gesockelt und hat einen integrierten Starter. Mit vorgefertigten Umrüstsätzen läßt sie sich schnell und rationell einbauen.

Und da sie etwa fünfmal so lange brennt wie eine Glühlampe, muß man sie viel seltener auswechseln. So spart man oben- und drein noch Personalkosten und Zeit.

Und Zeit ist ja auch Geld.

HELL WIE DER LICHTE TAG **OSRAM**

# Rechnen Sie mit dem Computer! Ganze Schutzräume in einem Arbeitsgang!

mit Nachweisen nach TWP, TWO, TWS für Decken, Wände, Bodenplatten, Unterzüge, Stützen etc., mit abgabefertigen Protokollen. Die Berechnung einer einzigen Schutzraum-Anlage amortisiert die Software.

Daneben ist Software für viele andere Gebiete wie: Stabstatik, Plattenstatik, Devisierung nach CRB oder VSS, Büroadministration etc. verfügbar. Ihr Computer – HP's modernste Serie 200/300 – kann effizient ausgenutzt werden. Rufen Sie uns an, oder verlangen Sie weitere Unterlagen.

## Nachweis der Biege- und Schubtragfähigkeit von Platten

Platte Nr.: D3	Lx	Ly	Lx/Ly	Dicke	Ho	pD
(m, KN/m <sup>2</sup> , KN)	5.13	4.53	1.13	.500	.445	123.0

Schub-Nachweis: t <sub>max</sub>	= .6 <= t <sub>r</sub> = 1.2					

## Biege- und Schub-bemessung von Streifen und Unterzügen

# Biege- und Schubmessung von Streifen und Unterzugs

The figure shows a technical drawing of a beam cross-section and a table of data. The cross-section is a rectangle with a width of 100 mm and a height of 100 mm. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points, 'A1' and 'A2', which are 100 mm apart. The beam is loaded with a central load 'P1' and two side loads 'P2' and 'P3'. The beam is divided into three parts: a central part of length 100 mm and two side parts of length 50 mm each. The central part is labeled 'P1' and the side parts are labeled 'P2' and 'P3'. The beam is supported by two points

## Neuheit auf dem Gebiet der Messwert- erfassung

Unser neues automatisches Erfassungsmodul wurde im Auftrag des Institutes für die Landtechnik der ETH und der Schweizerischen Meteorologischen Anstalt entwickelt und bietet Ihnen folgende Vorteile:

- eine erhebliche Zeit- und Geldersparnis
- die Zuverlässigkeit und die einfache Bedienung des Gerätes erlauben seinen Einsatz in den verschiedensten Anwendungsbereichen wie Meteorologie, Hydrologie, Umweltschutz, Chemie, Industrie, etc.

Dank einer robusten und leicht auswechselbaren Speicherkassette werden die aufgezeichneten Messungen direkt auf Ihren Computer übertragen und dort nach einem festgelegten Programm verarbeitet.

Verlangen Sie unsere Dokumentation:

## Projektierung

Beratung und Projektierung  
von Felsabträgen, Untertage-  
bauten, Demolitionen, Fels-  
sturzsanierungen.

## Ausführung

Ausführung von Bohr- und  
Sprengarbeiten bei Felsabträ-  
gen, Gewinnungssprengungen,  
Abbruchsprengungen, Fels-  
sturzsanierungen.

## Messung

Bestandesaufnahmen, Erschüt-  
terungsmessungen und Analy-  
sen durch eigene Spezialisten.

## Schulung

Sprengtechnische Informati-  
ons- und Schulungskurse.  
Fachorganisation des VSSF  
gem. VÖ Art. 27.2.

## Handel

Verkauf von Spreng- und Zünd-  
materialien, Sicherungs- und  
Lagereinrichtungen - Systeme  
HODEL und BTR-PREBETON -  
für Sprengstoffhändler und Ver-  
braucher.

Gutachten im Zusammenhang  
mit Sprengarbeiten bei Gerichts-  
und Versicherungsfällen.

**Neu: Gips-Union bringt das «So oder so»-Fugensystem.  
Jetzt gilt bei Wand- und Deckenbeplankungen nur noch  
eine Devise:**

# So oder so

«vario» garantiert ohne  
Bewehrungsstreifen  
die gleiche hohe  
Fugenfestigkeit wie  
beim herkömmlichen  
Verspachteln mit  
Bewehrungsstreifen.  
Im normalen Einbau,  
z.B. bei Wänden,  
sparen Sie auf diese  
Weise einen Arbeits-  
gang.

Decken werden mit  
«vario» grundsätzlich  
ohne Bewehrungsstrei-  
fen verspachtelt, sofern  
es sich um normale  
Beanspruchungen  
handelt. In allen ande-  
ren Fällen können Sie  
für die zusätzliche  
Sicherheit problemlos  
einen Bewehrungs-  
streifen (Papier oder  
Glasvlies) einbauen.

# O. «vario».

Zum ersten Mal können Sie mit einem einzigen Fugensystem verspachteln, wie Sie wollen. Entweder so: ohne Bewehrungsstreifen. Oder so: mit Bewehrungsstreifen. Das ist «vario». Die neue Fugentechnik. Sie besteht aus der Rigips-Bauplatte mit der neuen halbrunden abgeflachten Kante. Und dem neuen schnellabbin- denden Fugenspachtel «vario».

Das grössere Fugenbett bringt unerreichte Stabilität und eine bessere Spachtelführung für problemlose Korrekturen. Kurz: schnellere und

perfektere Ergebnisse. «vario» vereinfacht Lagerorganisation und Arbeit: Ein einziger Kantentyp genügt allen Ihren Anforderungen. Alles in allem und im Vergleich zur herkömmlichen Fugentechnik: «vario» ist wirtschaftlicher.

Sie wollen Arbeitskosten sparen und die Qualität erhöhen? Dann haben Sie jetzt mit der «vario» Fugentechnik Gelegenheit dazu.

**Mit uns arbeiten Sie konstruktiv.**

# Aluminium-Wellbänder für Dach und Wand

**SWISS  
TECH 86**

25.-29. Nov.  
Halle 115  
Stand 641  
Basel

Aluminium-Wellbänder sind leicht und bieten deshalb Vorteile bei Konstruktion und Montage. 4 Typen sind ab Lager ALLEGA erhältlich. Andere Wellungen, Dicken und Oberflächen, wie stuccogeprägt und einbrennlackiert, sind ab Werk lieferbar. Zahlreiche Befestigungszutaten erlauben eine rationelle Montage. Aluminium-Wellbänder sind korrosionsbeständig und garantieren jahrzehntelange Lebensdauer.

Ab Lager ALLEGA:  
91201 Wellung 110 x 30 mm  
Längen 4000 mm, 7000 mm  
Breite 1060 mm  
Dicke 0,85 mm

Ab Lager ALLEGA:  
92104 Wellung 100 x 25 mm  
Längen 5000 mm, 7000 mm  
Breite 947,5 mm  
Dicke 0,7 mm

Ab Lager ALLEGA:  
92201 Wellung 120 x 40 mm  
Längen 5000 mm, 7000 mm  
Breite 892 mm  
Dicke 0,85 mm

Ab Lager ALLEGA:  
92601 Wellung 142 x 20 mm  
Längen 4700 mm, 7000 mm  
Breite 1046 mm  
Dicke 0,7 mm
