## Ršmlqrt – R'smlqrt

The entire coinage of this mint seems to belong to the second half of the fourth century. This is indicated by the occurrence of early specimens (no. 18) in the Nisoria and Gibil Gabib hoards (see below, p. 56–57) and by the numerous specimens of the later groups buried in hoards during the time of Agathokles (below, p. 59); it seems unlikely that the coinage continued later than c. 305–300 however, as virtually all the coins are accounted for by the date of the Pachino hoard (cf. p. 59).

The question of where this mint was situated is a very difficult and indeed for the present insoluble problem. The main difficulty to be faced is, that the series consists of nothing but tetradrachms, and there are no smaller coins or bronze coins which might, from the evidence of local finds, help to locate the mint. The coins occur in a number of hoards from almost every part of Sicily though few are from the western part of the island; in any case there are no indications to be obtained from any local predominance in one area rather than another. The meaning of the name Ršmlqrt = Cape of Melqart is not decisive as there are many possible capes, and different places associated with Melqart-Herakles; and little reason to prefer one to another. The favourite proposals have usually been either Kephallidion (Cefalú) or Herakleia Minoa, but neither of these is convincing.

Cefalú has the merit of an excellent cape or headland, one of the most impressive and well known in Sicily. But it was a Sikel town and not Punic, though friendly with Carthage, and in 396 made a treaty with Himilco; after this it was captured by Dionysios and there is no evidence that it ever returned to the Carthaginian side. The fact that it was captured by Agathokles in 307 proves almost nothing about the situation there in the intervening period. It must be emphasised at once, that the presence of specimens in the Cefalú hoard published by Lloyd in NC 1925 is merely typical of the distribution in several other hoards of this period, and proves nothing about the location of the mint, as Lloyd thought; the coins are in fact equally represented in the 1957 hoard from Pachino.

The earlier phase of Cefalú is illustrated by the coins inscribed «Herakleiotan ek Kephallidiou», which have been discussed by Consolo Langher in *Kokalos* 7–8, 1961–1962, 166 ff. That these coins are undoubtedly coins of Cefalú, and not, as has been supposed by others, of refugees from Cefalú settled at Herakleia Minoa, is I think amply demonstrated by Mrs. Langher. Her conclusion is further reinforced by the existence of an unpublished coin in the Pennisi collection<sup>23</sup>, inscribed «Kephalliditan» (Plate 21 C). However the Pennisi coin seems to be appreciably later in style than the «Herakleiotan» coins, and I would think it likely that the «Kepha-

<sup>23</sup> After a photo which the late Barone Agostino Pennisi gave me some years ago. Unfortunately I do not have any note of the weight. As reproduced here the photo is about twice natural size.

loiditan» coin should be of the second half of the fourth century, without attempting to suggest too precise a date. If this is correct, it would certainly diminish the possibility of Cefalú being under Punic control at the period when the Ršmlqrt tetradrachms were being minted.

The other current favourite for Ršmlqrt, Herakleia Minoa, is likewise not without difficulties. The earlier settlement seems to have been destroyed in 409 B.C. but was restored by Timoleon in 345. At this period it seems to have flourished, as is attested by the recent excavations and discoveries on the site – from all of which one would not get the impression that Herakleia – with its notable Greek theatre – was anything but a Greek city at the time. However as has been remarked above, the coins inscribed «Herakleiotan ek Kephaloïdiou» must no longer be reckoned as part of the evidence. In other respects, however, it seems to me perfectly reasonable to follow the opinion of De Miro in *Kokalos* 4, 69–81, that Herakleia was in fact in the Greek zone, since it lies on the east side of the river Halykos which formed the boundary between Greek and Punic Sicily. The coins found at Herakleia are admittedly mostly Punic<sup>24</sup>, but this, it seems to me, is readily explained by the proximity of the city to the Punic zone, and such coins do form quite an element in the finds even from Greek sites much further east, such as Gela.

Of other possible sites for Ršmlqrt, we must, I think rule out cities which, though within the Punic zone and having associations with Herakles, have other coinages already assigned to them – Solus, Thermai; Eryx too has some Punic coins of the period with the legen 'rk (e.g. Plate 24, 23–24). As for Trapani (Drepana), the harbour of Eryx, there seems little if any reason for thinking of an important mint there in the fourth century. But another place which was securely in the Punic zone, and also has the association with Herakles, is Selinus<sup>25</sup>; the Greek city was destroyed in 409 B.C., but in the reconstruction which took place in the fourth century Punic elements seem to have assumed great importance<sup>26</sup>. In this connexion it may be worth making the bare suggestion that Selinus could be considered as a possible site for the Ršmlqrt mint. It must be admitted that there is nothing in the copious finds of coins (mainly Punic) from the site<sup>27</sup> which could directly support this hypothesis (a single tetradrachm was included in a hoard from Selinunte in 1877, cf. *Kokalos* 7, tav. XX, 2), though this, for reasons already outlined above, namely the non-existence of bronze coins of the mint, will be a difficulty whatever site we choose. In the meantime, and merely by a process of elimination, Selinus seems to me to have a certain attraction and although the Akropolis of Selinunte may seem an insignificant feature of the landscape when compared with the mighty rock of Cefalú, it does nevertheless form a small promontory which could conceivably have attracted the name of Ršmlqrt.

<sup>24</sup> *NSc* 1958 and *Annali* 5/6, pp. 296 ff.

<sup>25</sup> On Herakles at Selinus, cf. L. Lacroix, *Monnaies et colonisation*, pp. 34 ff.

<sup>26</sup> A. di Vita, *Archaeologia Classica* V, pp. 39–47.

<sup>27</sup> *Annali* 5/6, pp. 306 ff.

It must be added that Lilybaion (Marsala) would have been a possible candidate for Ršmlqrt except that it is, in my opinion at least, needed as the most probable site for the main Sicilian «Carthage» series. The fact that the earlier coins of that series are inscribed qrt hdšt does not necessarily or even probably mean Carthage itself, or if so only by extension as implying the «Carthaginian state». In any case the «Carthage» series is of undoubted Sicilian mintage and as such seems to be most appropriate to the city which became, after the destruction of Motya, the chief Carthaginian base in the island. The legend qrt hdšt is accordingly susceptible of another shade of meaning, and «new city» may aptly be thought to refer to the new foundation at Lilybaion which replaced Motya. There is good analogy for such a usage, and from quite another context, that of Cyprus in the eighth to seventh century B.C., where in some inscriptions the expression qrt hdšt refers to a city of Cyprus, probably Kition<sup>28</sup>. Possibly the legend on the «Carthage» coins of Sicily may contain some degree of ambiguity and refer at once to the new city of Lilybaion as well as to the Carthaginian state. At all events, it seems to me that this was the likeliest mint for the «Carthage» series, thus ruling out any chance of putting Ršmlqrt there.

### Ršmlqrt

1-4 (Plate 15)

This rather heterogeneous group is placed at the beginning of the series largely because there is no other obvious place for it. Nike does not appear on the obverses as she does everywhere else in the series, and the first die O 1 has instead a caduceus above in the field. The caduceus symbol occurs again at no. 23, and also in the «Carthage» series (e.g. SNG II 1620, McClean 3045), as one of the symbols associated with Tanit, by analogy with its occurrence on many Punic stelai (for which see Anna Maria Bisi, *Le stele puniche*, Rome 1967).

The most interesting coin of this first group is undoubtedly no. 1, where instead of the expected female head on the reverse there is a bearded head of Melqart, wearing a wreath and an earring (cf. Plate 21). The earring is paralleled by a coin of Solus (Plate 23, 21) and by the Siculo-Punic bronzes, SNG Cop. 94, also at Motya (Plate 23, 13). So far as I can trace, this coin with the Melqart head is unpublished although it has been in the B. M. since 1874. The other two reverses of this group are the usual female head with dolphins, and on R 2 (no. 3) a corn grain is added to the die, as in the case of Panormos no. 24, 43.

<sup>28</sup> S. Moscati, *World of the Phoenicians* (London 1968), pp. 104-105 and references on pp. 259-260.

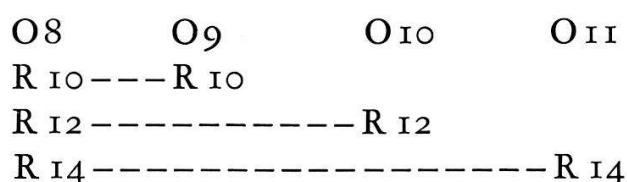

G. Cavallaro, *Panormos pre-romana* (Palermo 1950), p. 109 ff., however, equates qrt hdšt with Panormos; if we accept the syš coin series for Panormos, as I do, then this must surely exclude the possibility suggested by Cavallaro.

## 5-10 (Plate 15)

Three obverse dies O 4-6 occur in this group, and each has the regular Nike above. O 4 is not linked, but O 5 and O 6 are linked by R 6. The group has a certain homogeneity on account of the style of R 4, 5, 8 (nos. 5, 6, 10 respectively) which all follow an identical prototype with sphendone and stars. However the treatment of R 6 (no. 7-8) is interesting, with the hair rendered in a knobbly pattern, which has a considerable affinity to certain dies of Thermai (Plate 22, 4, 5, 6): these must be contemporary with R 6 and thus give a date in the third quarter of the century (see below 70)<sup>29</sup>. No. 9 (R 7) has another hair rendering but the face is similar to that of R 6. In the obverses of this group we see a style that is very typical for this mint, with its exaggerated upward surge of the horses, which is to be seen again at no. 21 (Plate 16) and no. 31 (Plate 17).

## 11-25 (Plates 16-17)

This group contains five obverses, four of which are linked in the manner indicated in the following diagram.

The obverses are of quite disparate character and only O 10 shows the really typical upward surge of the horses. On O 11 the caduceus symbol appears in front of the horses, as has been mentioned above (cf. O 1). The most typical style of reverse is that of R 9, 11, 13, a rather large and exuberant development of a basically Euainetan style, though without the wreath. There is no direct prototype or close parallel to be found in the «Carthage» series. The type of R 9 (no. 11) is adapted with a greater degree of stylisation when it comes to nos. 15-17, 21, 23-25. A corn grain appears on nos. 17, 23-25 replacing the dolphin behind the head. A quite different style is seen in R 10 (nos. 12, 20) and R 15 (no. 18), based on the model of Eukleidas' head with the five-fold earring (Tudeer rev. 35), a prototype which also seems to have pleased the engravers of the  $\varsigma\varsigma\varsigma$  series (nos. 14-15, Plate 8) at a much earlier date.

This varied but closely-linked group is important for the chronology of the mint owing to the presence of specimens of no. 18 in two hoards, those of Nissoria and Gibil Gabib. The date of the Nissoria hoard has been set, on other grounds, at about

<sup>29</sup> A specimen of no. 8 comes from the Mineo hoard (Noe<sup>2</sup> 697) whose burial date however should be early in the third century B.C., so that this is not indicative for the early part of the series.

330 B.C.<sup>30</sup>; that of Gibil Gabib (in Syracuse museum) must be the same, as it has the same latest coins, the N-series of Corinth and the «Carthage» series as far as the type represented by Jenkins-Lewis, pl. 26, 4. Thus the two hoards agree in essentials and give a good indication for the chronology of the Ršmlqrt mint, which can only have begun to operate in the second half of the fourth century; and this is further in agreement with the indirect indication already derived from our comparison of Ršmlqrt no. 7–8 (R 6) with Thermai nos. 3–5, specimens of which were also contained in the Gibil Gabib hoard.

### 26–30 (Plate 17)

In this short group a single obverse is coupled with four reverses. Of these, R 20–21 are of a rather hard and stylised aspect; noteworthy is the replacement in the die of the dolphin behind the head by a large fish, recalling another fish on *sys* nos. 19–20<sup>31</sup>. R 22–23 are quite different and more like the regular Greek-Carthage style; here for the only time in this series is there a wreath with corn ears, so characteristic of «Carthage» as e.g. SNG III 1048, Jenkins-Lewis, pl. 26, 2–6.

### 31–68 (Plates 17–21)

This large group comprises almost all the rest of this mint's output, with no less than eleven obverse dies; of these, only one, O 17 (no. 48), has so far not appeared in a definite linkage of dies, but there is no doubt that it too is embedded in this group by the style of its reverse, and it is therefore provisionally placed next to no. 47 whose reverse is closely similar (Plate 19). The scheme of the linkages is as follows:

O 13	O 14	O 15	O 16	O 18	O 19	O 20	O 21	O 22	O 23
R 26--R 26	R 32--R 32	R 39--R 39							
R 27--R 27					R 45-----R 45	R 51--R 51			
	R 31-----R 31	R 31--R 31	R 46--R 46	R 49--R 49					

On the whole the obverse dies display the rather wildly upward-rearing horses so typical for this mint, though the style is far from even as between O 13, 15, 17, 18, 22, 23 (nos. 31, 41, 48, 49, 65, 68). As against these, O 14, 16 (nos. 35, 42) are more restrained and placid, as is O 20 (no. 61). O 19 (no. 54) is another variant, harking back to the early style of Eumenes at Syracuse; while O 21 (no. 62), with its sagging horses, is also remarkable for having the legend reversed (viz. reading from left to right).

<sup>30</sup> ANS *Centennial Publication*, pp. 372–374.

<sup>31</sup> The same or similar fish on the coins of Akragas (Rizzo i, 16) has been discussed by the late Prof. F. E. Zeuner in *Numismatic Circular* 1963, pp. 142–143, concluding that it is probably a species of the giant sea-perch known as the mero.

The reverses likewise offer a great variety of style and treatment. The predominant style of head, equipped with a wreath but without corn ears, derives ultimately from the Euainetos model, but only at some removes; in fact, the pure Euainetos style, which appears sometimes at Panormos (e.g. Plate 13, 69) and also at the «Carthage» mint, is never found at Ršmlqrt, for whose typical styles much closer parallels can be seen in some of the characteristically Punic styles of the «Carthage» mint.

Of the various stylistic groups represented here, we may first distinguish R 24, 26, 27 (nos. 31, 33, 34), slightly astringent and stylised, with which may be compared «Carthage» dies such as Jenkins-Lewis, plate 26, 5; reverses 28, 29 (nos. 37–38) have a somewhat gentler aspect, leading into R 31 (nos. 40, 45, 49); the latter in turn has further affinities with R 38, 39, 40, 43 (nos. 50, 51, 52, 56). Here there is a likeness to «Carthage» Jenkins-Lewis, plate 26, 7. Another grouping consists of R 32, 33, 34, 35, 36, 37 (nos. 41, 43, 44, 46, 47, 48) all of which have in one way or another much in common with «Carthage» dies exemplified by Jenkins-Lewis, plate 26, 7 and here Plate 21 B, both representing a rather bold and important development of the Euainetos type; the corkscrew curls on Jenkins-Lewis, plate 26, 7 are also an important element on Ršmlqrt R 36, 37 (nos. 47, 48) and even R 51 (no. 67), and the rather stylised sweep of the back hair on R 33, 35 (nos. 43, 46) is close to that of «Carthage» Plate 21 B. A more compact style is shown at R 41, 42, 44, 46 (nos. 53, 55, 57, 59) for which it is difficult to cite any precise parallels; the presence of a corn ear on R 44 (no. 57) is to be remarked. Several other styles are represented, of which R 45, 48 (nos. 58, 63) have become so far removed from any Greek or even Punic prototype as to have an almost Celtic aspect<sup>32</sup>. It is equally difficult to find any close analogy for R 47 (no. 60) or R 49 (no. 64). On the other hand R 50 (no. 66) goes back to a rare «Carthage» die here shown on Plate 21 A, which would be nearly contemporary with Jenkins-Lewis, plate 26, 5, 7, and these latter have already been mentioned as analogies for other dies of the Ršmlqrt group with which we are concerned.

Clearly, the discussion of the style of these coins cannot be taken any further for the moment and without having the complete series of «Carthage» coins for comparison; it is hoped to present the latter series in further articles. For the present it should be remarked only that the parallels from «Carthage» which have been cited here all come from the third and last quarters of the fourth century – that is, assuming that the group with Horse and palm (as e.g. Jenkins-Lewis, plate 26, 2–8) covers approximately 350–325 B.C. and the group with Horse's head (as Jenkins-Lewis, plate 26, 9) approximately 325–305. In any case it is clear that the Ršmlqrt mint seems to have depended largely – and to a greater extent than šyš Panormos – on prototypes from the «Carthage» mint, though at the same time adding its own characteristic touches.

<sup>32</sup> SNG II 1641 could perhaps be cited in this connexion, but it is not close.

This small group, consisting of only a single obverse die and two reverses, poses something of a problem, for its place in the series is far from clear. Obviously it must be put either before or after the large group nos. 31–68. The style of the heads R 52, 53 is at first sight much more Greek than most of those in the preceding series, though this fact gives little indication of the true position. The obverse has a quadriga which is not so typical for this mint, and the wide exergual line recalls some of the later  $\varsigma\varsigma$  dies, e.g. O 18, 19 on Plate 13; for this reason, at least nos. 69–70 may plausibly be placed towards the end of the series. A rather fresh specimen in the Megara Hyblaea hoard 1967 might confirm this.

The occurrences of specimens of the last two groups (nos. 31–68, 69–70) in various hoards are reasonably frequent; the hoards in question are invariably from the period of Agathokles<sup>33</sup> and clearly confirm that the bulk of the Ršmlqrt coinage must belong to the last quarter of the fourth century. In fact the series seems to extend about as far as the «Carthage» Tanit/horse's head and the Agathokles quadriga types, both present in the Pachino hoard 1957. This hoard<sup>33a</sup> did not include the subsequent «Carthage» Melqart head/horse's head nor the Agathokles Nike with trophy types, and in fact seems to have buried about 305 B.C. It did contain specimens of the following numbers of the Ršmlqrt mint – 37, 41, 47, 48, 64. A similar but less well recorded hoard from Palermo 1936, of which some information is preserved in the B.M., likewise contained a specimen of no. 47.

The other hoards relevant for the mint represent a slightly later phase in the reign of Agathokles, containing both the Carthage Melqart head/horse's head type and also the Agathokles Nike with trophy type. The presence of these would indicate, I think, a date of burial early in the third century. The hoards in question are those of Cefalù, Megara Hyblaea 1967, Selinunte 1877 and Cammarata. The Cefalù hoard, published by Lloyd in NC 1925, included specimens of our nos. 17, 39, 48, 53, 64, 66. That of Megara Hyblaea 1967, not yet published but which I am grateful to the authorities of the Syracuse museum for allowing me to study, contained specimens of no. 53 and 69. The Selinunte 1877 hoard<sup>34</sup> contained a single specimen, of no. 39. Finally the Cammarata hoard<sup>35</sup> appears to have included the same main elements, among them some specimens of the Ršmlqrt mint, but we have no details.

Putting together the indications derived from the various hoards of the Agathoklean period for the lower end of the series and of the Nissoria and Gibil Gabib hoards for the earlier section, it seems justified to estimate the duration of the mint as covering roughly the second half of the fourth century (cf. above, p. 56–57).

<sup>33</sup> On hoards of the time of Agathokles, cf. Essays Robinson, p. 151.

<sup>33a</sup> A. Di Vita, *Annali* 5/6, 1958/59, 125 ff.

<sup>34</sup> Noe<sup>2</sup> 946, NSc 1877, also Kokalos VII, tav. 20, 2.

<sup>35</sup> Noe<sup>2</sup> 193.

This is a strange group which stands quite apart from the main series of the mint and cannot be accommodated within the regular sequence. It seems doubtful if it can be a regular issue of the mint, though it could be later than the regular series. Here, the head is transferred to the obverse and the quadriga placed on a deeply concave reverse. Both for this reason, and because of the style of the head O 25, we find a strong reminder of the Agathokles quadriga coins at Syracuse<sup>36</sup>; the latter had also influenced the style of the latest groups of the  $\varsigma\varsigma$  mint (cf. above, p. 44). It is noteworthy that the legend, here of course on the reverse R 54, takes the form  $r'\check{s}mlqrt$ , and in this respect resembles that of O 8, 9, 11 and 24.

It is difficult to find any explanation for the linkage of the same quadriga R 54 with a quite different head O 26 (no. 72), a head which is further linked with a stepping horse and palm tree reverse (R 55) at no. 73. This unexpected linkage might at first sight be thought to afford some positive connexion with the «Carthage» series where the types of no. 73 occur, but in fact the head bears little resemblance to any of the other dies present in the regular «Carthage» series, and the same may be said of the reverse with its two Punic letters below the horse. Since no. 73 will not fit into the «Carthage» series, it seems inevitable to regard it as something quite irregular, and the apparent linkage between the types of  $R'\check{s}mlqrt$  and «Carthage» cannot be looked on as significant either for dating or for place of mintage.
