ETH-Bibliothek Zürich, E-Periodica, <https://www.e-periodica.ch>

In addition to these, a new hoard has been reported («Sicily 1976/77»), which contained a number of Carthage series 3 and 5, Agathokles quadriga tetradrachms, Athens IV c tetradrachms, but most of all a large number («300 +») of Alexander tetradrachms, among which the Alexandria «rose» issue (Demanhur 4610) was said to be very prominent, though there is reason to believe that numerous other varieties of Alexander coins were probably included also. This new hoard of which few details are yet known is of special interest simply on account of its profusion of Alexander coins, never before met with in a Sicilian hoard. Another new hoard («S. E. Sicily» 1977) also contained many Alexanders of a variety of mints, and at least one Alexander came in a very recent hoard («S. Sicily 1978»). From the information we have so far, then, it is clear that there was an abundance of possible prototypes from numerous Alexander mints for the engravers of Carthage series 5 to draw on.

Commentary

Series 5 a (Plates 1–6)

Nos. 273–275

It is not easy to find any plausible position for this short sequence and it is here given at the beginning of series 5 a largely for convenience. The die-linkages are as follows:

O 86 O 87 O 87
R 227 — R 227 R 228

The Herakles head of O 86–87 are not particularly close to any others of series 5 a although it would be clear from the style alone that it is to this series that they must belong. The peculiar rendering of the horse's mane on R 227 with a parting is a feature that recalls the horse head of 176, 178 in series 3, though without any close stylistic resemblance apart from that. The sudden contrast with the «curvaceous» horse of R 228 is very striking. The latter, anticipated in series 3 (R. 187) is the typical rendering in series 5 a. The general shape of the horse head, also the palm tree with raised branches, recall perhaps those of 224 (series 3).

The die-links of this group are as follows:

O 88 O 89 O 90
 R 229 (caduceus)
 (fulmen)
 R 230 ————— R 230
 (triangle of dots)
 R 231 ————— R 231 — R 231
 (triangle of dots)
 R 232 ————— R 232
 (triangle of dots)

In this die-linked group two of the reverses (R 229–230) are of the normal style of series 5 a. The other two are totally different (R 231–R 232); their appearance is rather like that of 267, 268 in series 3 d. There as in the present case, the confident sculptural modelling of the normal type is absent and the effect is flat and scrappy. Again like 268 of series 3 our R 231 changes direction to the right. On both R 231 and 232 it is characteristic that the hair on the horse's forehead is shown parted to left and right below the rising tuft on top of the head; this arrangement is strongly reminiscent of the treatment found in many of the series 3 dies of various styles (e. g. 148, 254) but one which is never seen with the curvaceous style either in series 3 (216) or in series 5. The stylistic diversity of R 229, 230 as against R 231–232 is further emphasised by the comparable difference in the style of the epigraphy, the neat lettering of the former and the rather sprawling letters of the latter in both of which the final *tau* overlaps on the horse's truncation.

With the reverses appear marks in the field. On R 229 is a fulmen symbol, never found elsewhere on Carthaginian coinage, nor in Carthaginian material of any other kind²¹. This was doubtless copied from Greek coinage such as the pegasi of Ambra-
 kia, Corinth and Syracuse, but is of a distinct form²². On the other three dies of this group we have in the field a triangle of dots, such as that which was typical of the gold coins minted at Carthage in the middle and later fourth century. Such a mark does not remain exclusive to the gold however and was also used on bronze coins minted in Sicily during the early third century²³. Outside the sphere of Carthaginian coins it is difficult to cite the use of such marks except from certain of the eastern mints of Alexander – Tarsus (Demanhur 1974, 2187 etc.), Amathus (Demanhur

²¹ It is apparently unknown on the stelai. – If the fulmen had any connexion with Punic religion, it could be related either to Baal Shamin or to Resef (cf. Gsell IV 294, 326–327) whose very name signifies the «flame» or «lightning-flash» and who was incidentally identified with the Greek Apollo (especially in Cyprus, cf. CIS 89, trilingual inscription from Idalion).

²² Cf. Cammann, ANS NNM 53, no. 47.

²³ Jenkins-Lewis group III, also (bronze) appendix 3.

2708, 2710) Damascus (Demanhur 2904) and Aradus (Demanhur 3460 etc.). The triangle of dots as we have it on the tetradrachms (277) cannot in fact form any significant link with the gold minted at Carthage (Jenkins-Lewis group III) and which according to the dates adopted by Jenkins-Lewis (350/320 B.C.) was abandoned after group III for other forms of marking by the time this tetradrachm was minted.

With O 89 the caduceus symbol makes its only appearance in this series below the Herakles head, though it is prominent in series 5 b as a symbol on the reverse. The importance of the caduceus as a Punic religious symbol has been commented on in part 3, relating to this symbol as it comes in series 2/3. In series 5, as will be discussed below, the symbols which occur seem more probably related to the symbols which are typical of Greek coinage practice than of Punic religion, and this may be the case here. At all events there is no obvious connection of the caduceus with the cult of Melqart.

The style of O 89 seems strongly influenced by the Alexander coins of e.g. Alexandria and Sidon of a generation earlier. Note the shape of the lion's mouth as it curves around Herakles' ear, and projecting forward on to the cheek, a central feature of many of the eastern mints of Alexander. Around the lion's mouth is a stylised «frill» of loose flesh; this corresponds to a real feature of the lion's mouth in nature, visible when a lion's mouth is open as a frill of dark flesh contrasting with the lighter colour of the fur; it is a feature well noticed by Greek artists and emphasised e.g. in the lion-head spouts from Himera and elsewhere²⁴, on the lion-head coins of Leontinoi²⁵ and elsewhere, also on the lion-skin worn by Herakles at Kamarina²⁶. This «frill» is much emphasised in the dies of series 5 a but is by contrast a rarity in series 5 b where different Alexander prototypes are being followed.

O 89 is followed by O 90, closely derivative from it, and by O 91, 93 where the general pattern is remarkably similar.

Nos. 284–295

The die-links are as follows:

O 91	O 92	O 93	O 94
R 235			R 242
club			corn ear
R 236—R 236	R 240		R 243
corn ear	R 241		double corn ear
	corn ear		
	R 237		
	corn ear		

²⁴ Langlotz-Hirmer, *Art of Magna Graecia* pl. 76–80.

²⁵ Kraay-Hirmer, *Greek Coins*, 16.

²⁶ Westermarck-Jenkins, *Coinage of Kamarina*, esp. pl. 12–16.

In this group the majority of the reverses are marked by symbols. The club on R 235 here makes its only appearance in series 5 a whereas it is typical of many dies in series 5 b (nos. 326–346). The club would be apt enough in connexion with Herakles-Melqart but perhaps essentially as an attribute belonging to his Greek iconography. But the predominant symbol in the present group is the corn ear²⁷, usually standing up prominently in the left field, though once very unobtrusive (291) and once in the form of a double corn ear on a reverse which is also unusual in that the horse head faces right and is of divergent style (295). Another exceptional detail is one die where the extra foliage is placed around the trunk of the palm tree (294).

The Herakles heads O 91 and O 93 as mentioned already follow closely the pattern of 89–90 with its «Alexandrian» influence (pl. 14, B, C). O 94 has some resemblance to certain late Babylon issues e.g. Oxford 1406 A.

Nos. 296–324

Summary of die-links:

In this phase of series 5 a there are no symbols. The legend is normally 'mhmht varied only once to 'mmhnt (nos. 310–311). It is not easy to find plausible Alexander prototypes for the obverses of this group. In O 95–97 we find a rather heavy-featured fleshy style that really has no close parallels in the Alexander coinage: it has something, but not much, in common with some late examples from Sidon of the years 311, 310 B.C.²⁸ O 98 is almost certainly nothing else than O 97 with a number of details re-engraved. With it is linked a strange die, O 99, which is exceptional in representing the lion scalp in a pattern where the row of tufts protrudes from a scalp cut off in a vertical straight line instead of in the usual curved form; this may reflect the characteristics of certain Phoenician mints of Alexander such as Aradus and Carne (pl. 14, E), though the scheme is one which, as initially at many other eastern mints, derives ultimately from the early issues of Macedonia (pl. 14, A). Quite another style appears at

²⁷ The corn ear though rare is not entirely unknown on Punic stelai, C. Picard, *Karthago XVII*, 1976, 109 s. v. *épis* (examples of III/II c. B.C.).

²⁸ Newell, *Dated Alexander Coinage of Sidon and Ake*, pl. IV. 16, 18.

²⁹ E.g. Jenkins-Lewis group X b, with dot on leaf..

O 100; here the smooth part of the lion's scalp surface from which the tufts depend has more prominence than on most previous dies. O 101 and O 102 are again different, the arrangement of the lion scalp is less rigid but has a restrained array of tufts, O 101 having a rather small face and weak nose, whereas O 102 is far more powerful and expressive. These obverses are linked to the foregoing «heavy» group by means of R 253 and R 258. Finally there is the work of O 103–105 which is far more exuberant; in O 103–104 the curls above the forehead as well as the tufts of the lion-skin have a certain abandon. To these O 105 is closely related though the facial forms and expression come close to those of O 102. In none of these is it really useful to try to seek parallels from the Alexander coinage, and one can only point to the later issues of Babylon for something of a general analogy (e.g. Copenhagen SNG Macedonia, pl. 22).

The style of the reverses, including their epigraphy, remains comparatively regular apart from variations which merely facilitate the distinction of individual dies.

Series 5 b falls into two distinct phases. The first is marked by the occurrence of a number of symbols and other marks on the reverse – club, pellet, caduceus, astragalos, poppy (recut as astragalos), astragalos and pellet. The legend in series 5 b is always MHSBM except that towards the end of the first phases come a few intrusive issues marked 'MMHNT'. The second phase has no symbols or other marks, but continues to bear the legend MHSBM without exception. In principle there is nothing that enables us to decide whether this second phase might not in fact precede the first phase as we have arranged it. However the arrangement as given seems plausible; it seems natural to place near to the abnormal 'MMHNT' issues an obverse O 116 which is coupled with a reverse 'MMHNT' reverting to MHSBM and next to O 116 has been placed a very similar obverse which has only MHSBM with the remaining no symbol issues following this.

The first phase, with symbols, is fairly well die-linked. First are placed three obverse O 106-108 where the reverse in most cases carries the club symbol. There is no die-link from this to the next group but there the club symbol continues with the first three obverses O 109-111. At O 111 there begin a number of issues with either the caduceus or astragalos symbol. One reverse first marked by a poppy (R 298) was recut to make an astragalos (R 298'), others have astragalos with a pellet half-concealed behind the horse's mane in a manner reminiscent of other Carthaginian coins. The general sequence is attested by the history of R 282 which appears more worn with O 111 than with O 112, and R 293 which is more worn with O 115 than with O 113. O 114 is an isolated obverse with its own single reverse bearing a caduceus and is to be placed in the same general context though not die-linked.

The abnormal 'MMHNT' of R 293 is used first with O 113 then after transferred to O 115 which then used three other 'MMHNT' dies (R 301-303), while O 113 finished its career by reverting to MHSBM issues. The abnormality of those 'MMHNT' issues in series 5 b is to be emphasised; only some five dies in all have this legend (R 293, 301, 302, 303, 304), and the last of them precedes a MHSBM die with O 116. This is a minute proportion out of a total of some eighty reverse dies used for series 5 b as a whole, all the remainder of which are signed MHSBM. The exceptional 'MMHNT' dies (nos. 360, 370-374) were certainly made in the same workshop as the great mass of the MHSBM dies; the style of the horse head is in every way characteristic of the mint of series 5 b. The temporary change of control of the mint which seems to be attested by the way in which the long series of MHSBM is interrupted by a handful of 'MMHNT' dies must presumably be allowed the mean some-

thing – possibly suggesting that for a moment the «civil» mint was required to produce coins for and the name of the army. It is of course quite impossible to guess why or in what circumstances any of this could have taken place.

In any case the two series 5 a and 5 b are clearly defined and distinct, and any notion of trying to arrange the whole of series 5 so as produce a first series with MHNT followed by a second group with MHSBM, in a simple succession, is quickly doomed.

The occurrence of the symbols on series 5 b in the main serves to add one more factor to the distinct character of the two series. In two cases it is true we find an occurrence of the same symbol in each series; there is a club in 5 a but only once (286) and there in a way that distinguishes it from the numerous club dies of 5 b, being shown with the handle downwards whereas on 5 b it is always upwards. Also the caduceus, common in 5 b occurs once in 5 a on O 89. For the rest the symbols in 5 b are distinct. By contrast with earlier series where symbols occur which seem to have a relation to Punic religion, those which are found in series 5 a and 5 b seem to be of another kind. The caduceus, as remarked above, is an important symbol in Punic religion and could so be regarded in series 2/3³⁰, but here it is merely one of other symbols, all of which are known in the repertoire of Greek coins but have no specific Punic connotation. Thus the corn ear and astragalos can be found at Gela, the latter also at Abdera; the club, cornear and astragalos at Ainos; the astragalos, club, cornear, fulmen and caduceus on various Corinthian coinage³¹. It seems that in series 5 we should regard the symbols as evidence of the adoption of Greek mint practice in line with the adoption of the Greek Herakles type from the Alexander coins to stand for Melqart. This fits well at a period when hellenisation was specially strong in Punic life and culture generally.

The distinction made above between two mints is born out by the fact that, as mentioned above, the Herakles heads in series 5 b differ widely from those of 5 a. On the whole the style of the MHSBM mint is simpler and less elaborate. The heads are smaller, the lion-skin is treated differently in several respects. For instance the mouth of the lion where it encircles the ear is not adorned with the stylised «frill» of flesh which is always prominent in 5 a, but is simply a plain edge – the single exception is O 115. Also it is quite usual in 5 b for the part of the lion-skin where it is cut off behind Herakles' neck to be depicted with emphasis and shown with folds as if of drapery, making the head almost into a draped bust – this neckpiece is specially noticeable on O 108 and also on O 109, 112, 115, 118, 121, 123. Even where it is not so clear this neckpiece still seems usually to be present, and it is a treatment quite distinct from that of series 5 a where there is simply an abrupt cut-off of the lion-skin with little attempt to make it into a drapery-like feature. (In this the only exception is O 95 of 5 a, which is indeed closer to the 5 b model). It is hardly

³⁰ Cf. SNR 1977, 16.

³¹ Jenkins, Gela, no. 205 etc., 541 etc.; May, Abdera group CXV; May, Ainos, no. 8, 125, 325, 442; Cammann ANS NNM 53, no. 12, 23, 26, 47, 67.

possible to comment on the treatment of the lion's paws as a criterion as this feature is often enough not complete on the flan, but in general we see only the nearer paw the other being indicated very sketchily if at all (e.g. 357, 367); whereas the opposite was the tendency (by no means regular) in 5 a (e.g. 281). The general difference in character, the treatment of the lion's tufts and the modelling of the Herakles face, are sufficiently different to call for little comment.

The treatment of the lion-skin in series 5 b is best exemplified by O 108 (334); it seems to suggest that coins of this type were influenced by prototypes from the early Macedonian mints of Alexander (notably Amphipolis, pl. 14 A). If so, the engravers of these Punic coins were simply making their own adaptation and the result is distinct enough from the Amphipolis coins in any case. Another prototype which seems to have had some influence on series 5 b would be the mint of Babylon, where in its earlier phase (to 317 B.C.) the typical treatment of the lion's mane is in a long swag curving downwards (pl. 14 F); and we see something like this on O 110, 116, 117. Then in the later (post 317) phases at Babylon there were quite other styles prevalent (pl. 14 G) which perhaps influenced Punic dies such as O 124, 125. Apart from these examples, it is not easy to find Alexander coins which are similar enough to our series to be worth mentioning. In series 5 b, only O 115 has some affinity to the «Alexandrian» model of series 5 a (e.g. O 91, 93).

Series 6
(Plates 15-20)

The following group of coins belongs to a later period than any of those previously discussed, and is included here on account of the apparent connexion with Sicily. One important element is the issue of electrum triple-shekels of low gold content which formed group VIII in Jenkins-Lewis and which are here re-listed with some revision and additions. The remaining coins are large silver denominations, a small issue of 6-shekels and 3-shekels, with another and larger issue of 5-shekels; a 1-shekel of the same types as the 6-shekel is also included on the assumption of being genuine. What may have been a half-shekel of the same types as the 3-shekel coins is noted by Müller³² from an older publication but the specimen has not come to light since and nothing can be said about it. The group as a whole has a certain stylistic homogeneity; its approximate date can only be deduced from a comparison with other Carthaginian coins, and there are no finds to give an association with other coins of known date.

At first sight there seems to be a division into two groups, first the 6-shekel and 3-shekel without legend, and second the 5-shekel and the electrum (Jenkins-Lewis group VIII *) which both have the legend B'RŠT. However the division is not so clear stylistically. Of the large silver, the 6-shekel has a head which is close to that of the Carthage shekels (pl. 16 E) in its rather plain aspect as in the general arrangement of the hair though lacking the curl on top behind the corn ears, and having a triple not single earring and a plain not pendant necklace; the truncation is however more or less S-shaped like the shekels. The 3-shekel coins seem to be by another hand and are closely related to the group VIII electrum, with a rich treatment of the curls above the forehead and behind the ear, a top curl (but no top spray as on the electrum), triple earring, pendant necklace and S-shaped truncation (the latter also similar to the Carthage shekels). The 5-shekel coins may be said to be linked to the Carthage shekels by having a single earring and a top curl (but no top spray) but the neck and truncation are markedly different as on the 5-shekels there is really no necklace and the truncation is mostly indeterminate (where visible), running into the dotted border and once (on O 4) making a shallow S-curve; the 5-shekels thus stand rather apart from the rest. However it remains true that the whole group seems to hang loosely together and that the only points of contact with other coins are formed by the Carthage shekels and the electrum staters of Jenkins-Lewis group VII; the latter have a general similarity to the coins we are concerned with though differing markedly in the form of the pendant necklace and truncation which remains convex as on previous gold and electrum issues. The Carthage shekels are not closely datable except to the earlier third century, the Group VII electrum

³² Müller II p. 92 note 2 «D'après Bull. Sardo IV p. 68 no. 3 il semble qu'il existe aussi une drachme aux mêmes types.»

* For a revised list see Appendices.

stater should be of about 270. For what this indication is worth, it should suggest that the group of large silver and electrum coins belongs to about the early years of the first Punic war (\pm 264 B.C.).

The legend B'RŠT on the decadrachms and electrum tristaters has been discussed many times. Older references are given by Müller and Gsell. One theory is that this legend somehow corresponds to Byrsa, the name of the citadel of Carthage or at least that part of the city including the citadel. The name is known only from classical sources in its Greek form βύρσα (= ox-hide), on the basis of which the story went that Dido-Elissa when founding the African colony was to claim such territory as could be covered by an ox-hide; however by cleverly cutting the ox-hide into small strips she was able to measure out a sizeable area of ground. It is uncertain whether there is any real significance in the «ox-hide» name or whether it is, as has been suggested, an attempt to turn into Greek a semitic word meaning a «fortified space», on the analogy of the Hebrew BŠRH (with an interchange of the middle letters) ³³ – a similar root which is behind the name of e.g. ancient Bostra.

The connection between the coin legend B'RŠT and the Byrsa of Carthage has most recently been accepted again by Cintas ³⁴, but most opinion in recent times has preferred the interpretation as «in the land» ³⁵. This interpretation is unexceptionable, on the basis of the word 'RŠ or 'RŠT plus the prefix B (= «in»), a word familiar from the phrase «Eretz Israel». 'RŠ is a term attested from a North African inscription from the area of Maktar mentioning 'RŠT TSK'T. the territory of Tusca corresponding to what was later called «Pagus Tuscae» as an administrative division in Roman Africa ³⁶. The Greek equivalent of 'RŠ is, as Picard has pointed out, χώρα. The Carthaginian domain in Africa appears to have been made up of seven or eight quite large 'RŠT each under a prefect, the whole under the command of a Boetharch ³⁷.

How far this throws any direct light on the coin legend *b'ršt* is not certain. It was argued in Jenkins-Lewis that if the correct general sense of the legend is «in the land» then it should at least imply that the mint in question was not at Carthage. Bisi considers that the implication of 'RŠ is such as to mean not only «territory» but «national territory» and that this indicates that the coins were for circulation in the area surrounding Carthage ³⁸. However it can hardly have been necessary for coins to be so designated as all Carthaginian coins could have circulated in the whole area in any case (though these apparently did not – see below). If the coins are to be thought of as having an intimate connection with the African 'RŠT it might be

³⁷ Cf. Gsell II, 302.

³⁸ Bisi cf. note 34 above.

necessary to suppose the existence of another mint in Africa, which must surely have been quite superfluous and makes little sense.

In fact I still think that the solution is more probably the one indicated by the find spots of the coins; and this clearly suggests Sicily rather than Africa. It is true that apart from the finds the indications might be held to be equivocal. The weight standard now used both for the silver and the electrum denominations is no longer the Attic standard as had been previously used in Sicily, but the Punic shekel standard, hitherto only used at the mint of Carthage. But this is hardly a cogent objection against Sicily as possible mint at the date in question, for in Greek Sicily too since the latter days of Agathokles the Attic standard had been abandoned³⁹, and was not resumed except briefly by Hieronymos, for the minting of silver, though it was retained for gold. Another factor is the style of the B'RŠT group of coins; it is not entirely uniform, but can hardly be called specifically Sicilian since all the close parallels are typical of styles which were or had been current at the mint of Carthage. On the other hand, there is the question of the die-axis, and this criterion does really seem to distinguish the coins apart from those of the Carthage mint. At Carthage the regular upright axis ↑ ↑ had come in with the electrum issue of c. 320/310 B.C.⁴⁰ and thence remained constantly in use there until the last days of Carthage, as opposed to an irregular axis still found in other issues, e. g. of bronze, in Sardinia and Sicily (the regular axis being otherwise found very rarely and notably in Barcid Spain). There is a slight degree of variation in the regular axis of for instance the silver shekels of Carthage J-L pl. 26. 14 but less than that shown by the silver of the B'RŠT group. Above all, the electrum coins of the B'RŠT group have a decidedly irregular axis. This supports the deduction made in Jenkins-Lewis that the group of coins in question should have been minted elsewhere than at Carthage, as indeed is implied by the legend.

In fact the finds known are exclusively from Sicily. Isolated specimens of the electrum were recorded as found near or at Palermo (J-L 368 and 372.5) which is also the case for the silver 3-shekel Jameson 2349. Then a number of other electrum pieces, together with specimens of the various large silver denominations, came from a hoard discovered in 1896/97, allegedly at Porto Empedocle near Agrigento (IGCH 2207; J-L hoard XVI). Finally as many as fifty to eighty of the silver 5-shekel coins (decadrachms) came from a hoard found at or near Palermo in 1958 (IGCH 2208; possibly from Termini Imerese). As against this, no specimen of any of these coins has ever, it seems, been reported from Africa.

Naturally it is impossible always to be sure that find spots give an exclusive indication for place of mintage – it is only necessary to think of the great finds of Carthaginian gold and electrum staters found in Sardinia but certainly minted at Carthage. However the possible Sicilian origin of the B'RŠT coins must be taken seriously, in view of the find evidence. If so, what can be the significance of the

³⁹ Cf. Essays Robinson, 153.

⁴⁰ Jenkins-Lewis group IV.

legend B'RŠT? Having in mind the circumstances of the early third century and the probability that Carthage was viewing herself at the time as more or less the «great power» of the western mediterranean, it seems reasonable to wonder: does B'RŠT here apply specifically to the Sicilian province and if so does it mean that the latter was regarded at this period as an integral part of the Carthaginian state in the same way as the several 'RST of Africa? The question may be raised, but hardly answered, for lack of any direct evidence ⁴¹.

⁴¹ It is true that in their treaties with Rome the Carthaginians did not treat Sicily as a forbidden zone in the same way as Sardinia or Africa; but it seems uncertain how much we could deduce from this in respect of their precise relation with Sicily, since, like Sicily, Carthage itself was not a forbidden zone. On the Carthaginian attitude to Sicily in 241 B.C., see recently F. Decret, *Carthage ou l'empire de la mer* (Paris 1977), 167 f.
