Forecasting and Customer Service Management

214 pages, Hardcover, with diskette
Fr. 168.-/DM 193.-/öS 1'505.-
ISBN 3-7190-1385-5

With Excel diskette for the simulation of the sales and requirements forecasting under different conditions

This book will take you through a process of how to optimize the essential elements of the supply chain. This includes proper forecasting, the driver for producing the right products at the right time and in the right quantity, as well as securing an appropriate customer service level, which establishes and maintains a good customer relationship.

Written with a practical approach, the book contains many realistic examples. The reader is walked through the process of establishing optimal procedures, methods and policies as well as how to monitor the supply chain results and improvements.

Accompanying *Forecasting and Customer Service Management* is an Excel diskette which enables the user to simulate the sales and requirements forecasting under different conditions. All the possibilities are explained in the book and the combination is therefore a very valuable pedagogical tool for the reader. The program is extremely user-friendly allowing several possibilities such as:

- Developing forecasts using linear regression with or without a seasonal index using two years of history.
- Monitoring forecast accuracy, the value of the forecast error and conducting a bias control. The method for the bias control is the one recommended by APICS (American Production and Inventory Control Society).
- Establishing the requirements plans under different conditions considering safety stock, lot sizes and lead times.
- Establishing and simulating requirements when supply problems occur. These problems can be originated in production or purchasing.
