HOME NEWS

By a small majority, the Grosse Rat of the Canton Berne has unseated National Councillor Choquard from the office of Préfet of Porrentruy, to which post he was appointed as result of the cantonal elections last June. A judicial investigation has shown that the election in this particular district was characterised by gross irregularities: voters were bribed and employees unduly influenced for the purpose of executing voting proxies in favour of their superiors. No blame is attached to National Councillor Choquard, but some of the culpable parties are to be prosecuted.

By a decision of the Thurgau Cantonal School Board, instruction in the State Schools is to be reorganised so far that the belligerent side of history is to be reduced to a minimum so far as to inculcate in the coming generation strong ideas of peace.

A new Municipal Gymnasium is to be built in the centre of the town of Berne at a cost of Frs. 420,000.

The Rhone valley in the Canton Valais was the scene last Sunday of further inundations, the mass of rocks and boulders rushing down resembling a landslide over a wide region. The first reports of the catastrophe were somewhat alarming as will be gathered from the following reports published in the *Daily Telegraph*.

Owing to the recent great heat, which caused the bursting of the pocket of the glacier at the foot of the Dents du Midi and a consequent rush of water carrying down an avalanche of mud, boulders and hundreds of trees uprooted in the forest through which it passed, the bed of the Rhone has been blocked and the river diverted. In fact, a sort of dam was formed across the river. Now the sudden heavy torrents of rain which have followed within the last twenty-four hours have aggravated matters, and the Rhone has washed away part of the Simplon railway line, between St. Maurice and Eviannaz. The Simplon express this morning had to be stopped at St. Maurice, and the passengers taken by motor car to Eviannaz to continue their journey to Italy. The sleeping car passengers were rudely awakened to dress hurriedly in order to catch their connection.

Meanwhile the inhabitants of the Rhone Valley, particularly in the village of Lavey and the town of St. Maurice, are becoming more and more alarmed. Sappers sent by the Swiss authorities are helpless to divert the terrible rush of water. In all the villages of the Rhone Valley the tocsin has been sounded, and every one has been called out to assist in arresting a disaster. Certain hamlets have been cut off from all communication owing to the bridges being swept away and the roads flooded. Fortunately the heavy rain has now ceased, facilitating slightly the work of salvage.

Since the floods are subsiding, the large number of voluntary workers and soldiers have succeeded—by digging huge trenches—in bringing the river back into its natural course. No lives have been lost. The railway traffic through the Simplon is being diverted over the Lötschberg.

A special office is to be created in the Canton St. Gall to study the introduction of—and if possible to assist in establishing—new industries; the Municipal Council is to be asked to vote a credit of Frs. 25,000 for this purpose.

The taxes levied in the Canton Grisons from motorists, amounted since the beginning of this year to nearly Frs. 180,000, which exceeds by 25% the figure originally anticipated; the money is supposed to be used for the upkeep of the roads. It is feared that this new competition of road transport—in addition to that of the postal autos—will in future seriously affect the receipts of the Rhaetian railways.

The Swiss Alpine Club has received an anonymous donation of Frs. 5,000, the interest on which

is to be used for recompensing guides who have distinguished themselves in life-saving exploits.

Criminal proceedings are to be taken against Heinrich Ruegg, the Clerk of the Commune of Herisau (Appenzell A. Rh.), a preliminary investigation of his accounts having brought to light defalcations to the amount of Frs. 75,000.

EXTRACTS FROM SWISS PAPERS.

Beaux gestes.—Nous avons entretenu nos lecteurs du geste de Sir J. E. Heaton qui, par reconnaissance envers Montreux, versa la somme de fr. 500 au fonds pour Montreux Plage. On nous signale un fait analogue qui, à s'adresser non à une œuvre d'utilité publique, mais à un particulier, n'en est pas moins noble et désintéressé.

D'ailleurs c'est toute une histoire que voici :

Il s'agit de M. MacCormick qui est à la fois gendre de M. Rockfeller, habitué du Montreux Plage et grand joueur de golf. On sait que les Montreusiens pratiquent ce jeu à Aigle, sur les terrains achetés à cet effet; on sait en outre que ce jeu exige un personnel de "caddies" qui portent les cannes ou "clubs" nécessaires aux joueurs; ce qu'on ne sait peut-être pas c'est que les fonctions de "caddies" sont, à Aigle, confiées à des femmes. Or M. MacCormick s'aperçut un jour que celle qui le servait amenait avec elle une fillette, ou plutôt non, un petit être rattrapé rabougris, aux membres paralysés et ricroquevillés sur eux-mêmes. La pauvre petite, mal venue sans doute au monde, était atteinte de paralysie infantile, interdisant non seulement tout mouvement, mais condamnant la malheureuse enfant à l'inaction totale. M. MacCormick est un brave homme, il eut pitié et s'enquit de ce qu'on pouvait faire pour l'enfant ajoutant qu'il se chargerait de la dépense. M. le Dr. Darcy Chesse fut appelé qui consentit d'occuper de la malade et à l'hospitaliser à la Clinique de Flormont.

Simone, c'est le nom de l'enfant, s'y trouve depuis une année à peu près. Grâce aux soins empressés d'un personnel d'élite et d'un chirurgien de talent, l'enfant aujourd'hui, a le corps droit les membres, étendus, se redressant lentement, c'est le retour à tous petits pas, vers la vie, la vie qui semblait avoir disparu de ce corps disgracié. Quant au cerveau qui contenait la volonté, il se développe aussi, faisant un commencement d'homme de ce petit être qui n'avait rien d'humain.

Sans être trop optimiste, on peut supposer maintenant, que Simone réchappera de sa prostration première pour devenir sinon une femme normale, du moins un membre utile à la Société.

Et cela, c'est à M. MacCormick et au Dr. Darcy Chesse qu'elle le devra.

Feuille d'Avis Montreux.

Une S.A. en miniature.—La Suisse est le paradis des sociétés par actions; nous n'en possédons en effet pas moins de 8000, dont le capital varie entre des centaines de millions et... 1000 francs, ou moins encore. En effet, une société par actions au capital de 500 fr. vient d'être inscrite au registre du commerce! Il y a là un abus manifeste, contre lequel notre C.O.S. n'est pas armé. Car dans la pensée du législateur, la société anonyme, a pour but de permettre la constitution d'une entreprise là où le capital d'un seul individu ne suffit pas. Aussi une société anonyme au capital de 500 fr. est-elle un véritable non-sens. Sans compter que la fondation de sociétés de ce... calibre compromet le crédit des sociétés anonymes qui autrefois étaient considérées comme des entreprises tout particulièrement solides au point de vue financier. Il faudrait pouvoir exiger que l'en ajoutât à la raison sociale le montant du capital-actions; par exemple: "X.X.S.A. 500 francs!"..

NOTES AND GLEANINGS.

League of Nations.

Thoiry, the small village across the frontier 12 miles west from Geneva, has for a short time overshadowed the League capital. Some of the English papers treat the meeting of the two prominent statesmen as a sort of modern "Canossa," which, in the absence of something more definite, the host of disappointed reporters have jumped upon as a basis for generous though millennial suppositions. However, for the present, the only indisputable fact about this historic luncheon is the menu which consisted of sausages, pâté de Garenne, trout, chicken en casserole, artichoke, and a tart "sugared" over with the words "Vive la Paix," and all this for 15 French francs or 1/9 (Oh! where art thou, Pagan!) We are not told who

paid the bill and some enterprising reporter may yet discover that a coin was spun—as is usual in this country between two who understand each other so perfectly.

A singular article appears in the *North-Eastern Daily Gazette* (Sept. 17th), from which I give the following extracts:—

Christianity, declared Leo X., is a profitable superstition for Popes. Even more has the conception of a League of Nations proved profitable for the Genevese.

During the session of the Assembly, the entire galaxy of international statesmanship inundates their town, drawing in its wake those lesser armies of secretaries, journalists, and the merely curious, whose spendings, though individually modest, provide in bulk a highly appreciable augmentation for the municipal finances.

No wonder that Geneva regards with anxiety any movement calculated to upset so satisfactory an institution, or that her Press has scant sympathy for those unwilling to co-operate. She stands before the world like an amiable shopman displaying to wealthy but juvenile customers some peculiarly expensive toy, terrified meanwhile lest their squabbles should endanger the success of the negotiations.

The world cares little how the League is organised or whether it sits at Geneva, Constantinople, or Timbuktu. The constitution of the Council is a matter of local importance, interesting here in Geneva, but hardly affecting the masses farther afield. But it is a great and undeniable good that the leaders of all nations should meet, if only to lay before one another their different points of view. Personal contact is the only basis for a true understanding.

The Genevese and their beautiful city and its politics are merely accidents in the realisation of a practical scheme. Let them realise this lest they discover that they have inadvertently slain the goose that lays the golden eggs, and that the world has gone to find its peace without the aid of the League of Nations or of Geneva.

From this one would conclude that business and trade is flourishing in Geneva, but economic conditions and the state of the cantonal treasury are at present little short of disastrous.

In the Lobby.

How the many-sided opportunities which the League Assembly offers are quickly seized by audacious art students—and probably others—is shown in the following report taken from *The Star* (Sept. 20th):—

The Assembly of the League of Nations is a tame affair compared with the ever-changing life of the Lobby. Everybody is accessible in the Lobby of the League—"Sir Austen," "The Lord" (Lord Cecil), M. Briand, "Nansen," are successfully captured, first by one, then by another protagonist or journalist.

At the moment, I am watching with absorbing interest a pretty bit of Lobby play by a very insistent group of "lobbyists." Bright-faced and brightly-dressed girl artists, intent upon their job, are casting the "glad (artistic) eye" round for well-known Members.

One, near the window, is regarding her quarry first from this angle, then from that, asking herself, "Will he make a good sketch?" The quarry appears to be nobly unconscious of the "glad eye," but his slight nervousness betrays his thoughts, which are certainly, "Will she sketch me?" Alas for vanity! Mademoiselle passes on with the unromantic mental reflection, "He may make a good sketch, but he won't sell!"

Another fair damsel, however, has got a great stroke of luck. Paul Boncour, the ever-popular and brilliant French orator, is seated in yonder corner engaged in animated discussion with a German journalist—a great chance!

Coyly she approaches him, and waiting for a lull in the flow of conversation, she lightly pounces upon her victim—"Will Monsieur permit?"

An Englishman would be "too busy," but what could a Frenchman say? Only what M. Paul Boncour did say—"Mademoiselle flatters me!"

Then with amazing rapidity Mademoiselle gets to work with pencil and brush, whilst the French statesman reclines comfortably in his chair, alternately smoking his huge cigar, discussing politics with his German interviewer, and lightly throwing across his shoulder to Mademoiselle little flatteries not meant for the ear of the public.

"Will Monsieur turn a little to the left? I must have your hair." He turns a little to the left. "Head a little up—I must have Monsieur's charming eyes! . . . Bien!" And presently—

"Has Mademoiselle really finished? C'est merveilleux!"

To-morrow Mademoiselle will be back again in the Lobby with M. Paul Boncour for sale for two guineas (if a rich American is there it may be ten guineas) and on the look-out for yet another "catch."

During the first Assemblies of the League, sketching in the Lobby was confined to men, but as the news has spread to the art schools of the possibilities which the League Lobby provides, the fair sex has entered into keen and winning competition. For it must be admitted that whilst men had some difficulty in capturing "subjects," the Members of the Assembly capable of withstanding the wiles of these fair artists, are very few—indeed, if the truth were told, they seem to like it!

But there is one thing nobody can understand—these lady artists evince no desire to sketch the women Members of the Assembly! I wonder why?

Electricity Supply.

The interchange of electric energy between countries was one of the interesting questions discussed at the recent international conference in Basle. I suppose before the idea is developed much further, we shall see this energy taking its place in the customs tariff! The following summary is published in the *Electrician* (Sept. 17th):—

Six papers on the "Exchange of Electrical Energy between Countries," were presented at the World Power Conference at Basle. These are dealt with in a report presented by Prof. Landry, of Lausanne, which we summarise below.

In this report, it is pointed out that the exchange of electrical energy between countries is still in the earliest stages of its development, and with the exception of the most recent efforts, is restricted almost entirely to countries with superfluous water power who supply other countries with no water power, or in which the production of energy is restricted to expensive hydro-electric schemes owing to the lack of suitable fuel. The more recent schemes are particularly commendable, because they have the effect of giving the international exchange of electrical energy a wider basis, and a much greater range than it has hitherto possessed, so that there is a combined utilisation of the various sources of electricity regardless of the limits imposed by political boundaries.

Switzerland is a country possessing superfluous water power in spite of the fact that it is very highly electrified, so that it is undoubtedly an exporting country. During 1925, in fact, it exported about 650 million kWh, or approximately 20% of the total energy produced. Of this, about 46% was taken by France.

Canada has supplied altogether about 14.2 thousand million kWh to the United States during the period 1911—1926, or about 35% of the total energy produced by the exporting companies.

Though the statistical data concerning the international exchange of energy is very scanty, it appears that Canada with a population of 9,000,000, exports annually about 155 kWh per head, as compared with 900 kWh consumed, while Switzerland, with a population of 4,000,000, exports about 166 kWh out of every 700 produced.

Dealing with the advantages of and necessity for exchange, Prof. Landry remarks that it is certainly no longer necessary to point out the advantages of interconnection of power stations and supply systems in one and the same country, and that to make it possible to embrace all the sources of energy in any one country, care must be taken that the natural auxiliary resources are distributed in such a way that a steady production of energy is ensured.

As it is in the interests of every individual country to utilise the resources within its boundary as completely and rationally as possible, it is equally in the interests of every country to pay attention to economy, and this leads to the second necessary step of international interconnection being taken in order that there may be exchange in both directions. For these reasons, it seems certain that the number of international connecting lines will be increased as the need arises, and it is to be hoped that the many difficulties in the way of international exchange which are not economical in character will gradually disappear.

The fact remains that there are at present numerous difficulties in the way of energy exchange, both small and great. Some of these are due to the laws governing international trade which have been analysed and discussed by Dr. Trümpler. Another difficulty is that relating to price, and comparisons are often made between the prices for energy in exporting countries, and those which the foreign purchaser has to pay. These comparisons appear to take no

account of the fact that there can be no fixed price per kWh, as this varies with the season, day, hour, method of production and utilisation, superfluity or the reverse of the power resources, possibility of equalisation, security of supply, natural or legal obstacles preventing the conclusion of agreements, the position of power stations, local demand, importance of the supply, and others.

Prof. Landry also reviews the legislation which at present exists in the various countries with regard to the export of power. This exhibits on the one hand broad-mindedness, and on the other hand, growing conservatism or even open enmity. Considering the matter broadly, the hope is expressed that the former policy will obtain the upper hand, and it is hoped that the World Power Conference will take its share in attaining this end.

Whilst dealing with modern technical achievements, here is a description of the **120-ton Travelling Crane**, which has been recently installed in the shops of the Swiss Federal Railways at Yverdon, to facilitate the repair of electric locomotives; it is taken from the *Mechanical World* (Sept. 17th):—

Its principal dimensions are as follows:—Span span, 25 m. (82 ft.); height of lift for locomotives, 7 m. (23 ft.), and for single loads, 10 m. 32.8 ft.); load carried by the two main winches jointly, 120 tonnes (118 tons), and by auxiliary winches, 8 tonnes (7.87 tons); speed of lifting, up to 15 tonnes (14.4 tons), 3 m. (9.8 ft.) per min., and 15-60 tonnes (14.4 to 59 tons), 2 m. (6.56 ft.) per min.; speed of travel of main winches, 15 m. (49 ft.) per min., and of auxiliary winches, 30 m. (98 ft.) per min.; travelling speed of crane with light loads, 52.5 m. (172 ft.) per min., and with heavy loads, 35 m. (115 ft.) per min. The crane bridge consists of two main lattice girders carrying the main winches with two outer girders, the auxiliary winches being carried between the outer and main girders. Each of the two main winches consists of two 30-ton units mounted on a steel carriage. The principal feature of the electrical equipment is the use of the Ward Leonard system of control; each motor or group of motors is supplied by a separate generator, and a very wide range of speed is obtainable with the minimum loss of power.

The Cost of Surgery.

The best comparative article that I have come across for a long time on a matter that concerns us all sooner or later, appears under this title in the *New Statesman* (Sept. 18th). I think those of my compatriots—and I know a good few—who can talk from experience will underline every word; I make no excuse, therefore, for reproducing this correspondence in *extenso*:

An interesting correspondence in a contemporary some time ago dealt with the comparative costs of surgical operations in England and Switzerland. The evidence appeared to show that in Switzerland such operations, with the incidental requisite, are obtainable at far less cost than in England, without deterioration of quality. It may be useful to describe a recent experience, and to discuss the meaning of the facts. That they were in no way exceptional I am assured by many witnesses.

During a holiday in the part of Switzerland whence I write, a member of my party was attacked by appendicular pains, and consulted a surgeon, who is a man of about forty, holding a high though not the most senior position in the large University city where he practises. He was not anxious to operate, but was urgently asked to do so by the patient and myself. She went into a nursing home, where she found herself in the greatest peace and comfort. The place is perfectly equipped, absolutely clean, as one expects in Switzerland, quiet, with double doors to the rooms, and a pleasant outlook. The nurse was not exceptional, but simply chosen because she could speak English. The patient has been in several nursing homes in London, this being her seventh experience of the kind. She distinctly affirms that she has never been really nursed before. The nurse slept in a bed beside her—when she slept, but in fact cared for her assiduously night and day. In every way she would have adorned the record of the country which gave Florence Nightingale and modern nursing to the world, but she was Swiss.

Amongst the worst features of the nursing homes in London, most of which are a disgrace to the medical profession and to everyone connected with them, is the diet. In this Swiss home the patient was not only fed pleasantly, but suitably to the case. The nurse went downstairs and chose from the menu what her patient could safely take after an appendectomy. There is so much more to say about the feeding in all our institutions in Britain, and the contrast between it and the pioneer researches of our physiologists that I must refrain from further pursuit of this part of the subject.

But here are the actual charges: Room and board, 16 francs per day; board of the nurse, 8 francs per day; service in the operation theatre,

MISCELLANEOUS ADVERTISEMENTS

Not exceeding 3 lines:—Per insertion, 2/6: three insertions 5/- Postage extra on replies addressed to *Swiss Observer*

ENGLISH CLERGYMAN receives young Swiss family life; home comforts; English lessons if near park and museums; moderate terms.—Rev. C. Merk, 5, Roland Gardens, South Kensington, S.W.7.

40 francs; nurse's fees, 10 francs per day; extras negligible. At the rate of 25 francs to the pound, it will be seen that these charges are, according to our ideas, ridiculously small. The service was, in every way, by far the best that the patient had ever enjoyed.

Now for the surgeon. He was helped by a personal friend of the patient, who made no charge, and who gave the anaesthetic. The operation was unusually tiresome and protracted, owing to the previous surgical vicissitudes of the patient. The work was beautifully done, and there were no complications. Three weeks after the operation the patient was bathing in the lake. The surgeon himself visited the patient three times a day for the first three days, thereafter twice daily, the first visit at about 7.30 a.m. Sundays made no difference. He paid at least thirty visits to his patient. No one could have been more assiduous and careful with an imperial patient. The slightest symptoms were studied and dealt with. After and for all this, including the preliminary examinations of his patient, he sent in an account for 250 francs—that is to say, £10. In closely similar circumstances, another lady, the aunt of this patient, was operated upon a few years ago in London. The surgeon never saw her after the operation, and asked for 75 guineas, later reduced to 50, which was very nearly 50% of her annual income. I can confidently aver that in no respect of experience and skill or standing could the London surgeon be counted the superior of the Swiss.

On all counts, therefore, small and great, from the surgeon's fee to the nurse's, including the amenity of the home and its intangible atmosphere, the Swiss record belongs to a different *ethos* altogether from our own: though Joseph Lister as well as Florence Nightingale are ours. Here in Switzerland their spirit and skill were incarnate and available at, say, one-fifth to one-tenth of the cost of services in England, notably inferior in certain essential particulars. What is the explanation?

Here I am by no means sure of my ground in all respects, and can only present some considerations to the reader. Of course, no first-class London surgeon could operate at such fees, given his customary scale of expenses. A friend of mine has adequate but very modest rooms in Welbeck Street, which cost him £400 a year, and he is not a surgeon, nor does he obtain any fees like those of a surgeon. The Swiss surgeon has rooms in the very best part of his city, but admittedly the visitor must ascend two flights of uncarpeted stone stairs before he reaches the apartment, which probably costs no more than £60 a year. But his patients think no less of him for that.

No intelligible reason occurs to me why the standard of nursing, feeding, cleanliness, comfort should be so much higher in the Swiss nursing home, and there is much to say regarding the necessity for raising the standard of such places in our own country: but in respect of the fees charged by surgeons it seems probable to me that we are here involved in questions which concern the type and structure of the respective societies in question. Here in Switzerland there is a republican form of Government, with a genuinely democratic form of society. There are no titles. There is no powerful, privileged, favours-and-honours-dispensing, leisured and dominant class. My Swiss surgeon's wife is not concerned to get hold of so much money that she can give such dinner parties as may attract the kind of persons who may later on be induced to present her daughters at Court. (She is herself a doctor, and his assistant). All that sort of thing, which is almost too disgusting to write about, is unknown in Switzerland. If a man is a good surgeon, he is known and spoken of and held in honour as a good surgeon, and that is good enough for him and his family, as it should be. He does not consider it beneath his dignity to visit his patient, even when she is doing perfectly well, and another doctor is also visiting her twice a day. He has no social ambitions, because he has already realised what should be the height of any good man's ambition.

If anyone could obtain the services of a first-class metropolitan surgeon, and nursing, etc., all told for £30 or less in England, the problem of the cost of surgery, as we know it, would scarcely exist. There is an impression that this problem at present concerns only the middle classes. The rich have what they want, and the lucky poor have our glorious and incomparable voluntary hospitals. The trifling circumstance that the poor have their names in many thousands at any one time on the waiting lists of our London hospitals, where they remain often for months, awaiting operations many of which should be urgently and instantly performed—this is forgotten. Meanwhile, large numbers of competent young surgeons eat their heads off because it would not be consonant with their professional standing or prospects to perform abdominal operations for £10. The whole thing, as it stands, is a stupid and cruel scandal. Alas, that its roots are so old and wide and deep!

Iodine and Health.

This is another example of Swiss superiority in successful treatment for preventing the growth of certain diseases; our friend, Dr. Saleeby, the great apostle of the sunlight cure, makes the following appeal in the *Daily Telegraph* (Sept. 21st):—

In Switzerland, whence I have just returned, there has been made in recent years great advance in the conquest of disease by the simplest, safest, and least expensive means imaginable, which I have been advocating for our own country during some years, and for which I now seek to invoke your readers' interest on behalf of national health and efficiency. The new practice consists in the restoration of iodine to the national dietary. This long familiar element is known to all of us in the form of the tincture applied as a first-aid antiseptic to wounds in the trenches or the nursery. But 31 years ago the bio-chemists discovered that iodine is a necessary constituent of the unique and most potent secretion of the thyroid gland in the neck. Without iodine this gland, therefore, cannot effectively work for us, and we suffer in all the ways—many, various, vital—which depend upon failure of its activity. The most frequent symptom is goitre.

Now in Switzerland and in the United States and Canada and New Zealand and Austria, and many other countries, the practice is spreading of making a small addition of iodine to the usual dietary—which is disastrously depleted of iodine, for reasons of too detailed interest to find room in this brief letter—and thus ensuring that the thyroid shall never lack raw material for its irreplaceable product.

Success has followed success. The first reports were admirable, and the latest are more so. Rumours of the power of iodine reached my ears in 1921, when I happened to be travelling in the "goitre belt" of the United States, the Middle West, where iodine is exceptionally scanty in the soil. Just two years ago, Sir David Bruce, the world-famous master of tropical hygiene, in his presidential address to the meeting of the British Association in Toronto, on "The Conquest of Disease," named the prevention of goitre by the use of iodine as the latest achievement in this life-giving field.

Already those who, like myself, visit Switzerland every year, can observe a marked diminution in the number of cases of goitre in young people encountered in the streets, and it is reported that no more cretins are being born in certain cantons since the regular administration of iodine—as a food, not a drug—to expectant mothers. Far more even than goitre and cretinism is involved. The range of protective and constructive power possessed by the thyroid gland has not even yet been fully measured. For instance, in the Galton Laboratory of National Eugenics at University College, London, Dr. Percy Stocks has shown the co-relation between cancer and goitre, and has suggested the general use of iodine in middle life as a preventive of cancer. Doubtless we all need our share of this vital element at all ages from the womb to the tomb.

The cost, as in the iodisation of salts, now officially practised in various parts of the world, is negligible. In certain of the United States and in certain cantons of Switzerland none but iodised salt is now allowed to be sold. In some other Swiss cantons the price of iodised salt is fixed no higher than that of ordinary iodine-destitute salt. In England a few health and school authorities have made beginnings, and glorious reports have lately come from Cumberland County Council, for instance; but the student can scarcely summon patience who sees hundreds of millions squandered yearly on the "cure" of disease that remains uncured, on palliation and anodynes, whilst so simple and natural and costless and proven a course as I advocate remains a suspected curiosity.

Drink delicious "Ovaltine"
at every meal—for Health!

LETTRE DU BOUT DU QUAI.

Vous savez comme moi le rôle intense qu'a joué dans l'histoire des siècles passés, le petit endroit charmant que l'on nommait et que l'on appelle encore un "boudoir". Il était pour la femme, toutes les femmes, le lieu où l'on commence par causer, où l'on jase ensuite et où, pour finir, s'insinue l'intrigue et même parfois davantage! Que de têtes tombèrent, au moment de la Révolution Française, d'abord dans une conversation de boudoir puis ensuite sur la place publique!

De nos jours le boudoir est un peu "vieux jeu", nos diplomates internationaux ont trouvé beaucoup mieux. Ils ont transformé la Société des Nations en "boudoir select", et le grand bâtiment du bout du quai, n'est plus en somme que le toit bienveillant sous lequel naissent, grandissent, expolient ou meurent les propos bons ou mauvais qui conduiront le monde de demain. Plus que jamais cette dernière Assemblée des Nations a prouvé l'exactitude de ce fait. Et comme elle vient de se clore à la vitesse d'un des nouveaux express du "Great Western" il m'est loisible de vous en dire quelques mots. Lorsque l'on a suivi jour après jour le travail de ces Messieurs, il est bon pour vous comme pour moi de tirer quelques conclusions.

Tout d'abord une chose est très nette, c'est que l'Assemblée est une institution parfaitement inutile. Elle n'est désormais plus qu'un prétexte, un paravent qui voile le vrai travail, — si j'ose employer ce mot pour désigner un fait aussi immatériel! — Cette constatation est un grand dommage pour l'avenir et de la Société et du monde en général. L'Assemblée ne compte plus parce qu'elle n'est plus qu'un Corps amorphe et sans tête. Il lui manque un chef, une personnalité qui la conduise, qui l'oblige à prouver sa nécessité par son travail, et sa volonté par son contrôle. Or d'hommes semblables il n'y en a plus, ou presque!

Branting, le grand Branting est mort; Lord Cecil, le Grand Lord Cecil, est bien encore vivant, mais il était chef lorsqu'il représentait l'Afrique du Sud; il ne l'est plus, il ne peut plus l'être comme Représentant du Cabinet Baldwin. Il reste bien le Docteur Nansen (et l'on ne dira jamais assez tout ce que l'esprit scandinave a déjà donné de forces vives à la Société des Nations) mais sa manière tranchante et individualiste d'envisager un problème, lui enlève un peu de la popularité que son confrère suédois avait su acquérir. Cependant Nansen est le dernier, le seul, qui cherche encore à examiner les agissements du Conseil sans avoir "a priori" dit "oui et amen! à tout". Vous m'objecterez que les Grandes Puissances ont des hommes de tout premier plan qui de loin, de Londres ou de Tokio, semblent être des chefs. Je vous répondrai que ces hommes existent effectivement et même à foison, mais qu'il n'est pas de l'intérêt des Puissances d'en faire des Chefs, et qu'au contraire, les Omnipotents tentent en ce moment de donner une influence quasi dictatoriale au Conseil (ceci au détriment naturellement de l'Assemblée) tout en laissant en façade ce dernier se réunir en grandes pompes une fois l'an.

Pour le surplus, comme je vous le disais au début tout se passe en petits comités, en parties à deux, à trois, ou sept au maximum; dans quelque salle bien isolée du Secrétariat, ou encore mieux entre la poire et le fromage dans quelque petit café de triste mine au coin de la vieille ville. La fameuse "atmosphère de Genève" est partout, sauf à la Salle de la Réformation, et le Café des débardeurs de la rade est devenu "le boudoir du monde!" Notre destinée se joue au coin d'une table, et s'équilibre à la valeur des qualités culinaires de quelque brave savoyarde, et tout le monde trouve cela très bien, très "moderne", très "dernier chic"!

Cependant le réveil sera dure et une fois de plus les Allemands l'auront causé! Eux, ont compris ce qu'on pouvait tirer de l'Assemblée; eux, ont compris ce que l'on peut tirer de tout l'organisme de Genève si au lieu de le prendre comme un jouet agréable, on s'en sert comme une machine réelle et qu'on en pousse tous les rouages à fond. Eux, ne se contentent pas de discours, si beaux, si émouvants que . . . l'on ne sait plus à la fin ce que l'on disait au début. Eux, parleront peu, mais travailleront beaucoup. Ils se créeront une clientèle: tous ceux qui cherchent un chef et qui ne demandent pas mieux que d'obéir. Le temps ne sera plus éloigné alors où un Grand Homme réapparaîtra alors au sein de l'Assemblée, cet homme sera un Allemand. Il sera trop tard alors pour récriminer. Les Allemands auront été les seuls à prendre la Société des Nations au sérieux, très au sérieux, ils en récolteront les fruits, et ce jour-là on fermera l'attrayant "boudoir international", une Voix impérative parlera au nom des autres! . . .

LE "BOY" DE L'ASCENSEUR.

EIDGENÖSSISCHE GLOSSEN.

Gesundheitsamtlicher Jargon.

Im Berichte des Eidgenössischen Gesundheitsamtes über seine Geschäftsführung im Jahre 1925 wird gesagt, "dass sich die Frequenz der übertragbaren Krankheiten in durchaus normalen Grenzen gehalten habe." In durchaus normalen Grenzen! Wenn wir nun untersuchen, was bei uns normal ist, so kommen wir zum Ergebnisse,
