SWISS ALUMINIUM FOR A SWEDISH FERRY-BOAT

The new ferry-boat "Skane", built for the Swedish government to ferry rail traffic between Trelleborg and Sassnitz is the second largest of its category in the world. It has a displacement of 6,534 gross tons and is practically 500 feet long. For the superstructure of the new boat, which is entirely in aluminium, Aluisse delivered 81 tons of aluminium sheeting 5 to 8 mm. thick and measuring approximately 6 ft. 7 in. by 26 ft. 3 in. If the 46 tons of semi-finished aluminium which was also supplied for the other metal structure is also taken into consideration, it will be noted that this ferry-boat contains some 127 tons of Swiss-made aluminium.
