très décolletés et traités en sandales. Les bouts ouverts et les brides rappellent les années trente. Les matières sont somptueuses: le brocat et le crêpe satin ainsi que la combinaison de daim et de cuir, parfois même avec ornements de strass. Quant au secteur hivernal le plus important, celui des bottes, il est aussi traité selon la mode chez Bally. Des chaussures ajustées montant au genou, dans le style des bottes de cheval, sont en cuir lisse; les modèles élégants sont en daim élastique, ajusté. Dans ce genre aussi, on aime les effets deux tons et les talons hauts

(58 mm). La collection est complétée par des bottines qui se portent principalement sous le pantalon et peuvent remplacer les bottes dans cette application. Quant à la chaussure masculine, on lui trouve en général, chez Bally, des formes plus fines et plus étroites. Les modèles sportifs eux-mêmes sont caractérisés par des lignes plus élancées. La matière la plus utilisée est le cuir lisse très soigneusement mis en œuvre mais l'on trouve encore du cuir verni et un peu de daim pour le soir et pour quelques modèles spéciaux.

(P. 24) PARIS READY-TO-WEAR: THE EMPHASIS ON FEMINITY AND ELEGANCE

Parisian ready-to-wear collections for the autumn/winter 1974/75 show a logical development of the elegantly feminine line that has been in fashion for some time now. Flattering materials, soft lines and a comfortable but slenderizing width are the main features of most of the collections. Skirts are making a great comeback. They come in every possible variation, but mostly cut on the bias, also often close-fitting over the hips and flaring out below in a swirl of pleats. The length varies from just below the knee to right down to the ankle. The return to shirts has led to a revival of blouses, twinsets and cardigans, offering great scope for combinations in keeping with the present fashion for coordinates. The fabrics most widely used are jerseys.

Softly flowing dresses in supple materials discreetly emphasizing the body's contours are very much to the fore. Particularly popular here are pure silk or silk-look jerseys, as well as cashmere and angora fabrics, and fine woollens. The novelties include girlish pinafore dresses as well as the pullover dress, body-moulding at the top and flaring out below. Another fashion highlight is the newly discovered Russian look, while peasant styles are also popular. The wool crêpe "peasant dress" decorated with embroidered braids, will be ideal next winter worn with boots, for both day and evening. The loose-top dress gathered at the waist, with straight pleated skirt provides a contrast to the sack dress. Classical lines, long loose or fitted jackets, often with a waistcoat, and swinging skirts are the main features of the new suits. Coats will be very full, tent-like or pleated. The soft materials, used here as everywhere else, favour sporty belted effects. For the evening there will be floor-length capes, with or without hoods.

The range of colours is very wide. The favourites are reds and rusts as well as green. There are also a great many light blues, beige and clarets. What is striking is that the range of colours is very quiet and subtle, never loud, suggestive rather of an autumn landscape lightly veiled in mist.

Charlotte Kummer

(P. 40) THE SWISS SILK INDUSTRY TODAY by Hans Georg Rhonheimer

The Swiss silk industry, with its glorious past and recent profound structural changes that have reduced it to its present size, this year experienced a very special satisfaction. The fashion trends of the last few years led almost inevitably in the spring 1974 fashions to an unheard of new lease of life for silks. The preference that has been growing stronger for some time now for lighter and lighter fabrics, and the trend towards soft flowing materials give women today the unique possibility of following a really feminine fashion and at the same time owning extremely practical dresses for today's active life. This tendency seems likely to stay and will undoubtedly give fresh impetus to the creation of new qualities of silk, rayon and synthetics.

The tremendous rise in the price of all raw textiles, caused mainly by the large speculative and stock purchases of the Japanese at the end of 1972 and 1973, as well as being part of the general price explosion in 1973 and the result of the petrol crisis, raises new extremely difficult problems for the fibre converting industry, especially the Swiss fabric industry, owing

to its modest size typical of Swiss high quality production in general.

For some time now there has been a very definite return to natural fibres. This tendency affects not only wool and cotton but also silk, especially as the chemical fibre industry has continually endeavoured to manufacture fabrics resembling silk.

Under these circumstances, one may well wonder about future developments in the field of fabric production, especially silk, whose share in the total tonnage of all fibres used is no more than 3 %. In spite of this, Switzerland produced 18.7 million metres of silk and chemical fibre fabrics in 1973, i.e. 1.4 million metres more than the previous year. The total turnover amounted to 220 million francs, of which 2/3rds was accounted for by exports. The total value of pure silk fabrics alone amounted to 28 million francs, i.e. slightly more than in the previous year. We are at present going through a transition period, in which the prices of all textile raw materials should gradually settle down. First of all, China, which today is Europe's main supplier of raw silk, will not want to let this important source of foreign currency dry up and, second, silk fabrics manufacturers will want to find ways and means of keeping the price of finished silks at a reasonable level capable of attracting custom. As everyone knows, a European advertising campaign has been launched: financed by China, carried out by a Swiss advertising agency under Swiss auspices, it aims to create an image of silk that will make it popular with the young too.

Silk will always remain the most beautiful of natural fibres and even the publicity of the chemical fibres industry—which has sometimes gone too far—has not succeeded in depriving it of its almost magical attraction. When a Swiss fabric manufacturer in the silk branch presents his collection, in any part of the world, curiosity is always first shown as to what he is offering in the way of pure silks, whether printed or plain. And every fabric manufacturer will continue to try and include a few pure silk novelties in his collection, even if the situation is otherwise unfavourable.

Swiss products are able to gain a firm footing on world markets only thanks to their superior quality combined with excellent taste, and nowhere does this apply more clearly than in the fashion and textile branches. Attempts are continually being made to imitate the remarkable specialties of the Swiss textile industry. However as efforts are constantly being made to give new creative impulses to the production of fashion, so the silk industry—in spite of all technical and economic difficulties—will remain an example of what can be achieved by tradition, experience and a sense of quality.

CAPTIONS

(P. 42) STÜNZI SONS LIMITED, HORGES

Manufacturing programme: Switzerland: wide range of fabrics for women's clothing, men's shirts and men's fashionable clothing. Heavier weights: silk polyester fabrics (Tersuise®).

France: Fashionable plain qualities. Heavier weights: crêpes in viscose/acetate and acetate/nylon (washable). England: large selection of plain fabrics, prints and jacquards, mainly in polyester.

Captions: 1. "Country Style", 112/15 cm, 110/14 g, pure cotton — 2. + 3. "Pandora", 112/15 cm, 45/6 g, pure polyester — 4. "Taffetas Feu", 140 cm, 70/4 g, pure textured Tergal® — 5. "Campana", 160 cm, 280/90 g, 94 % polyester/6 % cupra rayon — 6. "Fril-

Captions: 1. Etched lace medallion for insertions — 2. Insertions or modesty-pieces for décolletés on satin — 3. Single-tone cotton insertion on tulle — 4. Single-tone etched braid in very light execution — 5. + 7. + 9. Broderie anglaise striped fronts with false tucks — 6. Multicoloured rayon embroidery on synthetic crêpe — 8. Multicoloured rayon embroidery with appliqué work on cotton voile.

(P. 76) BLEICHE LTD., ZOFINGEN

Manufacturing programme: Women's wear: fabrics for dresses, suits, coats, trousers, skirts, trouser-suits; jersey for dresses, skirts, trouser-suits.

Captions: 1 to 10. "Como", 150 cm, 370 g, mixed fabric in 55 % Trevira®/45 % virgin wool — 11. Mixed fabric, 150 cm, 310 g, 39 % Trevira®/32 % wool/29 % viscose.

(P. 92) KNITTED FABRICS
WITH A SILK-LOOK

The extraordinary popularity enjoyed by silk fabrics opens up tremendous opportunities for the success of soft and flowing, very fine mesh jersey, even when made of pure cotton or polyester. Forster Willi, at St. Gall, which has been manufacturing jerseys for more than two years now specialized, right from the start, in the finer qualities. The firm's output immediately gained a footing on markets both overseas and in Europe. After the already well-established "Smeralda" quality in cotton with a silken handle, a mixed cotton/polyester article—with a special finish to stop it from pilling—is now arousing great interest. The jacquards feature figurative designs, stylized flowers and classical geometric motifs. These fine designs, which also include pinhead effects combined with figurative or floral motifs, are ideal for youthful softly draping dresses and blouses. A large range of shirting jerseys with small patterns completes the very high quality programme that offers every kind of fabric that could possibly be needed for the new soft line in dresses, shirtwaist blouses and top quality shirts for men. Recently the pure polyester silk-look jersey "Canasta" with its discreet sheen has been completed by a second quality, "Canasta satiné". These two softly flowing articles come in distinctive plain colours, with a powdered look. Couture too makes lavish use of these soft silky articles, in versions embroidered with dainty little flowers.

CAPTIONS

(P. 118) BALLY SHOES FOR THE AUTUMN/WINTER 1974/75

Both the sporty and dressy shoes at Bally have an even finer line this year, in keeping with the general trends of fashion. Great play is made of colour combinations and the use of two different types of leather, creating balanced contrasts. Dainty buckles, metal ornaments and straps are the highlights of the new collection. Heels vary in height mainly between 58 and 64 mm, although the dressier models go as high as 80 mm or more, which must be considered an absolute necessity for obtaining the right proportions, with today's skirts and dresses coming down below the knee.

The typically sporting shoe features a crêpe sole and a 58 to 64 mm crêpe-covered heel. Slender forms and a fine square toe add the fashionable look to the casual town shoe without which no modern wardrobe is complete. The elegant sporty walking shoe and pump have the edge of the sole slightly emphasized, a 64 mm heel, often with a high upper and rather square line. A novelty of Bally's is the "Bally Relax", a comfortable casual shoe designed specifically for walking. Here, use is made mainly of soft and supple suede. The chief colours in the sporty sector are loden, olive-green and all the rust tones as well as muted and rather dark browns. "Bally International" and "Bally Madeleine" also stand out in this collection with their eminently fashionable elegance. The line here emphasizes graceful square toes for the elegant sporty style and narrow, rounded forms for the dressy shoe. The latter features Louis XV heels (height 72 to 80 mm), narrow straps, appliquéd leather ornaments and fine perforations. The colours—often in two-toned effects—are muted. They include slate or marble, vicuna or watercress green, an amethyst shade called Etna, and blue tones named Atlantic and Pan. The new trend for pastel shades is marked by a rosewood shade called Cajou. Evening shoes are very open, in the style of sandals. The open toes and straps remind one of the 30's. The materials are rich: brocade and satin crêpe as well as a combination of suede and leather, sometimes even with strass ornaments.

The most important winter item—boots—is also given highly fashionable treatment by Bally. Knee-high riding-style boots are made of smooth leather; elegant models moulding the leg come in elastic suede. Here too, there are attractive two-toned effects and high heels (58 mm). The collection is completed by low boots worn mainly under trousers instead of high boots.

As for men's shoes, at Bally they tend to be finer and narrower. The sporty models too feature more slender lines. The most popular material is very carefully worked smooth leather although patent leather and a little suede are still used for evening wear and a few special models.
