2. Durability of Structures

IABSE Symposium, Lisbon, Portugal, September 6 – 8, 1989

The Call for papers for the next Symposium of IABSE has drawn great interest. 330 abstracts were submitted to the Scientific Committee, which met on October 21, 1988, in Lisbon, to select the abstracts for the Technical Programme. The task of the committee, chaired by Mr. H.-H. Gotfredsen, was not an easy one due to the number of excellent papers received. As indicated in the Preliminary Invitation, the format will be the same for all 4 sessions, dealing with **Durability of Structures** under the following aspects:

- General Durability Aspects
- Influence of Material Properties
- Aspects of Design and Construction
- Assessment and Maintenance of Structures.

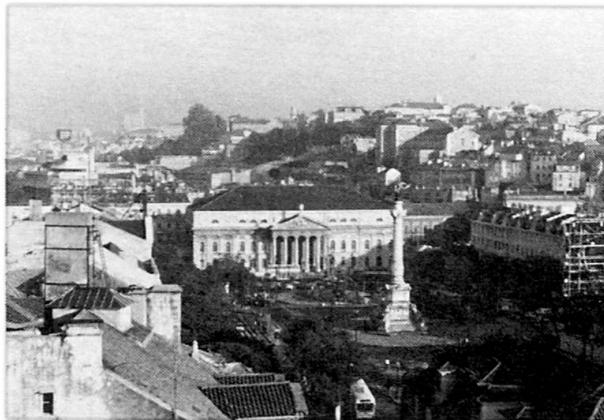

Each session will start with keynote lectures, followed by parallel sessions with presentations of participants. Also a concurrent workshop will be conducted on:

- Lifespan Considerations
- In-situ Inspection
- Durability of Suspended Structures
- Joints, Bearings and Drainage.

Poster sessions have become an asset at IABSE conferences, and will again be one of the best opportunities for high level and personal exchange of views on case studies in durability of structures.

A commercial exhibition will complete the technical programme.

International associations in the field of structural engineering have contributed to the programme with suggestions and nominations for Keynote Lecturers. Positive replies and contributions have been received from CEB, CIB, FIP and RILEM.

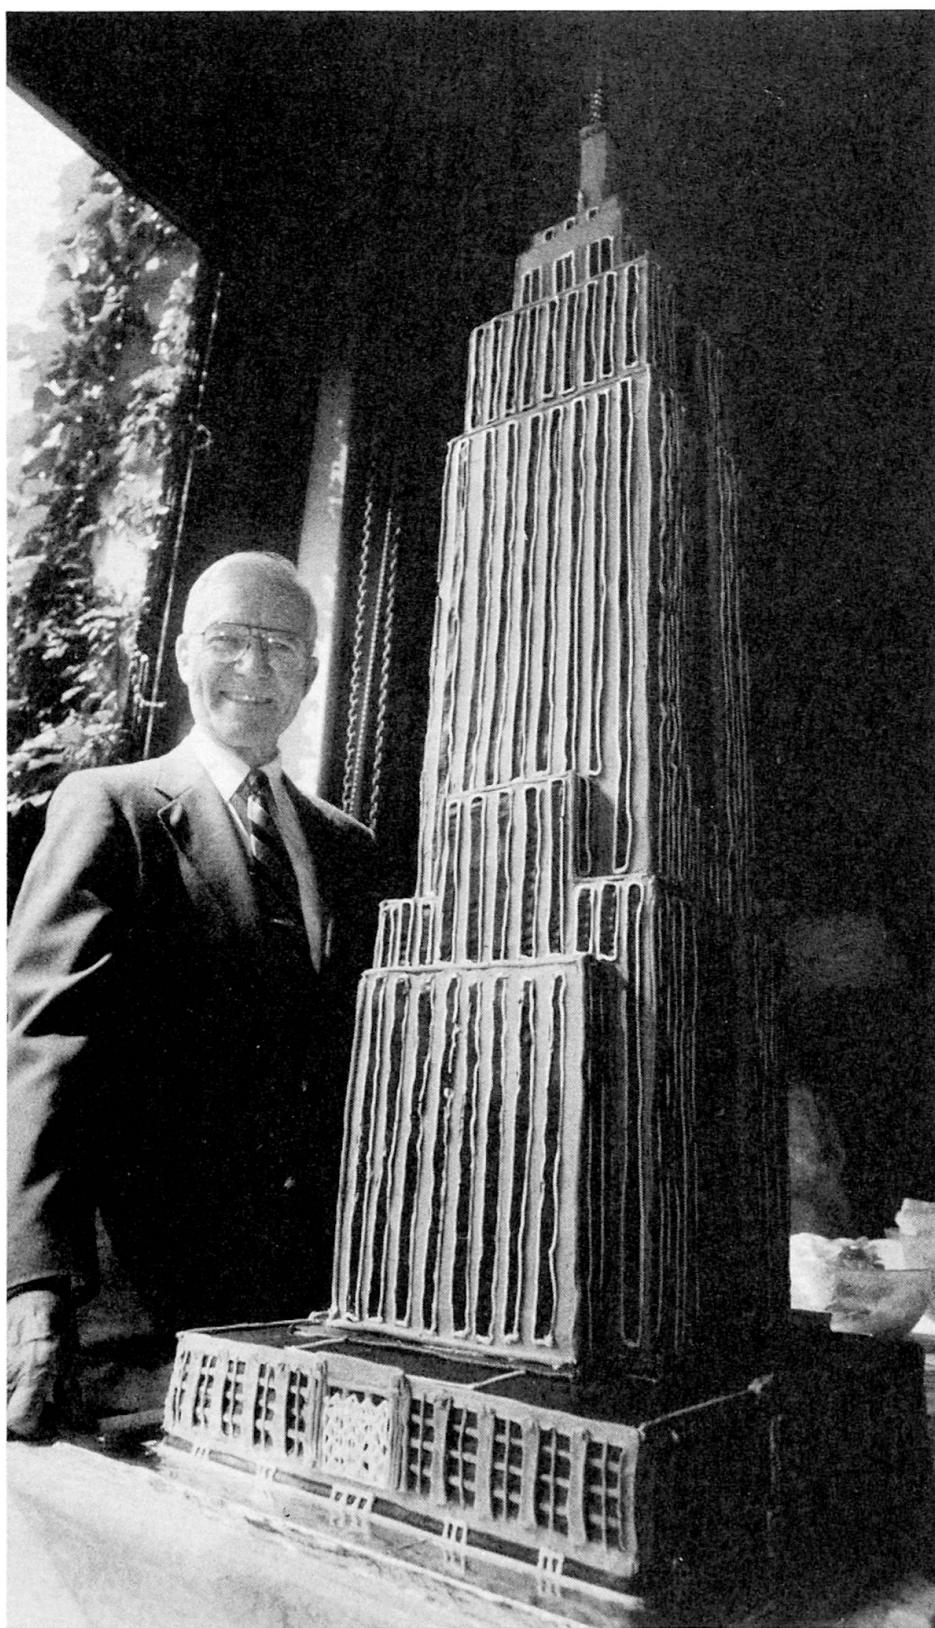

The Final Invitation, to be issued in January 1989, will be mailed to all those who have shown their interest in participating in the Symposium. The Organizing Committee is preparing a unique social and cultural programme which will complete the already very promising technical programme.

The beginning of September is still part of the peak season in Lisbon and in Portugal, therefore members are encouraged to register early for the Symposium. Over 500 participants are expected in Lisbon: thanks to the topic, the location, and the recent history of IABSE Symposia (Tokyo 1986 and Paris-Versailles 1987, each with almost 700 participants) reigns an optimistic mood among the volunteers and staff preparing the event.

Checking meeting rooms after the Scientific Committee meeting, October 21, 1988.

Happy birthday!

Lehigh University civil engineering professor Lynn S. Beedle admires a 4-foot cake representing the Empire State Building, baked to commemorate the 20th anniversary of the Council on Tall Building and Urban Habitat. The council is based at Lehigh. The idea for the council was stimulated at the 1968 Congress of IABSE.
